PREFATORY NOTE.
As the members of the Hakluyt Society are already aware, the much-deplored death of the editor, at a period when barely a third of the text was in print, has deprived the present work of the advantage of his final revision, and also of the notes which it had been his intention to affix to the concluding chapters. As, however, the portion thus left unannotated was comparatively small, and seemed to contain few points not already touched upon in the notes to the earlier chapters, it has been deemed advisable not to introduce any additional matter, and the work, therefore, is issued in the state in which the manuscript was left at Dr. Brown's decease, with the exception of a few necessary alterations and excisions.

The task of seeing through the press the remainder of the text, together with Dr. Brown's Introduction, has been performed in a most able manner by Dr. E. Denison Ross, whose linguistic attainments, and particularly his intimate acquaintance with Arabic, have been of especial benefit to the book. Dr. Ross has also prepared the general index to the volumes.

Acknowledgments are also due to Mr. E. G. Ravenstein for the set of illustrative Maps which, together with an explanatory memorandum, he has prepared and presented to the Society for reproduction in these volumes. Founded as they are on an independent study of Leo's writings, these maps form in themselves an important contribution to African geography, and greatly enhance the value of the book.

In addition, Mr. Ravenstein has kindly contributed the index of place-names, which not only includes all references in the text, but also indicates the position of each place upon the appropriate map.

The great bulk of the work has necessitated its issue in three volumes. Ordinarily, these would have been allotted, two to one year, and the third to the next. After careful consideration, however, it has been judged best to issue all three for 1895, thus presenting the subscribers for that year with an extra volume.

WILLIAM FOSTER,
Hon. Secre/ary.
Vill

INTRODUCTION.
The Arab who wrote the famous work to which these pages form an Introduction bears many names. That by which he was first introduced to the knowledge of lettered Europe by Gian Battista Ramusio (1485-1557), Secretary of the Venetian Council of Ten, was Giovanni Leone or Leo. This name he received from Giovanni de' Medici, Pope Leo X, who was first his master, then the priest by whom he was converted to Christianity, and finally his godfather and patron. Hence Leo is also sometimes known as Joannes Medices. Having been born in Granada he is occasionally termed Eliberitances'-Granada being falsely supposed to be the
1 The writer of the article "Leo, Johannes" in the Encyc. Britannica (vol. xxiv, p. 453) is in error when he states that the Pope bestowed on him "his own name Johannes and Leo."

2 Paulus Jovius. "Leon de Grenade" is the name given to him by Genty de Bussy in De Zitablissement des Franfais dans la Rigence d'Alger, etc. (1835).

INTRODUCTION.

Roman Illiberes. However, from the fact of Leo being an African, or from his writing on Africa, he is now invariably called Leo Africanus.

His Arab name was Al-Hassan Ibn Mohammed Al-Wezaz, Al-Fasi,1 that is, the man of Fez (a surname he obtained in his later years). He is also known as "El-Gharnthi", the Granadian,2 a designation which, apart from other facts, renders it extremely probable that he was born, not in Morocco, as "Al-Fgsi" might seem to indicate, but in Granada. On this point, indeed, there can be little doubt: for not only does he state the circumstance more than once in the body of the volume,3 but Ramusio, who obtained his information from one of Leo's friends, reiterates the statement. Again, Leo tells us (p. 299) how he met at "Elmadin" "one of Granada my countreyman, who was exceeding rich, having serued as an archer in the region for fifteen years"; so that there is no reason for the hesitation expressed by Pory in his preface (notwithstanding the explicitness of the title-page of his translation), as to whether Leo "were borne in Granada, in Spaine (as it was likely), or in some part of Africa".

1 Hartmann, Edrisii Africa, p. xix.

2 Thus (in 1889) M. Delphin calls him "El Hassan ben Mohammed El Ouezaz El R'ernathe plus connu sous le nom de Lon l'Africain".-Fas, son unioersiti, etc., pp. 6-7.

3 The book ends after the Arab fashion, "finisce il Libro di Giovan -Leone nato in Granata e allevato in Barberia" (1oth March, 1526).

INTRODUCTION. III

The passage which seems to have raised doubt in his mind and in the minds of other commentators, e.g., Braus,1 is the Latin of Florianus: "Cui " (Africa) "et vitae initium et educationis mea: bonam partem debeo",2 which Pory translates, correctly enough: "Africa unto which countrie I stand indebted both for my birth and also for the best part of my education" (p. 187). But the Italian original bears no such interpretation. "Essendo l'Affrica mia nudrice, & nella quale io cresciuto, & dove ho speso la pi' bella parte & la maggiore degli anni miei." This simply means that Africa was his "nurse", and that he there passed the early part of his life.

Yet, with all the suppleness of his race, he was wont in the course of his life to claim either Africa or Europe as his birth-place, according as it seemed best for his own interest. "For mine owne part", he tells us, "when I heare the Africans euill spoken of I will affirm my self to be one of Granada: and when I perceiue the nation of Granada to be discommended then will I profess my selfe to be an African" (p. I9o).
Yet, in spite of these explicit statements, M. Canal, a resident in Algeria, in quoting our author's account of Oujda, calls him "Leon l'Africain, voyageur Toscan"; and Mr. Rae, a most intelligent traveller, I Allgeneine Geographische Ephemeriden, Bd. vii (i8oi), p. 3 i.
2 Antwerp edition (1556), p. 36.
3 Bulletin de la Soc. de Giog. et d'Arclologie d'Oran, 1886.

INTRODUCTION.
who cites Leo frequently in Pory's version, perpetrates the extraordinary blunder of saying that he was "born in Barbary and brought up as a Christian in Granada"," the exact contrary of what was the case. Even the accurate Prescott, in that he refers to him as "a learned Granadine who emigrated to Fez after the fall of the capital"," seems to have been under the impression that Leo's learning was obtained in Spain. Much of his learning was of Italian origin, though he was undoubtedly an erudite man after the Arab standard, before he came to Rome.'

His BIRTH AND PARENTAGE.
That he was born in 1491 is a statement which writers have hitherto copied from one another, without taking the trouble to ascertain upon what foundation the assertion rests. In reality, it is a
1 Country of the Moors, p. 22.
3 Jerome Lalande (Mimoire sur l'intkrieur de l'Afrique, Paris, " An troisieme de la Republique," p. 4) actually states that Leo went to Africa in 1491, "a la suite du Roi d'Espagne."
4 Ramusio (1485-1557), though the contemporary of Leo and in Rome on business of the Venetian Republic many times during his residence there, does not seem to have been personally acquainted with him. In the dedication of the first volume of his Navigatione to Hieronimo Fracastoro, he merely tells his friend that the short account he gives of Leo was obtained from a gentleman of good credibility (degno di fede) who knew him at Rome and lived some time with him there.

INTRODUCTION.
mere inference, that as Granada was surrendered on the 2nd of January 1492, and Leo went to Africa as a child, he must have been born in the previous year. But this also assumes that Leo's father left Spain as soon as "from the Alhambra were all the crescents flung", though, as history has it, most of the Moors remained in the city; and even Boabdil himself did not emigrate until 1493.
But, as I will presently show, there is no foundation for assuming that Leo's family left in 1492, or indeed at any particular date, before he was old enough to make the Thagia pilgrimages. The mere fact of his having been acquainted with Spanish admits of no safe inference. For his family must have spoken it freely, especially if, as I hope to prove, he was born, not in 1491 but in 1494-95; in that
case they were for at least three years subjects of Ferdinand and Isabella. Leo
affords us some safe guidance in this difficulty; for he intimates that when Saffi
fell into the hands of the Portuguese he was twelve years old. This event
happened in 1507-8, which would put his birth in the year I have indicated. Again,
he tells us that when he was fourteen he knew " Sidi Jeja", who was there as
captain of the country about Saffi engaged in collecting the revenues of King
Emanuel the Fortunate. Now this man k well known to history. He is the
personage who is usually called Sidi Yahia ben Tafut. But he did not obtain his
post-that of official chief of the Arabs-until about the year 1508-9, when,

INTRODUCTION.
according to the usual legend, Leo must have been seventeen or eighteen. This of
course renders it impossible for us to accept 1491 as the year of his birth; and as
Leo's personal acquaintance with " Sidi Jeja" did not begin till two years after the
capitulation of Saffi, namely, in 1509, the difficulty of believing that he was born
earlier than three or four years after the fall of the last Moorish kingdom in Spain
becomes an impossibility.

Who his father was we are not told, except that he owned land, etc. But it is
certain, from the distinguished position which his relatives occupied in Morocco,
that he was a man of wealth and consequence, both in Fez, and previously in
Granada. Leo's uncle seems also to have been a person of consequence; for he
was sent as Ambassador from the King of Fez to the King of Timbuktu, and bore
a wide reputation as "an excellent Oratour and a most wittie Poet". Leo seems
also to have had another relative at Fez, who impoverished himself with the study
of alchemy (p. 66); but beyond this we know nothing of his family, and nearly all
that we know of his career is derived from the incidental remarks he chooses to
vouchsafe in the course of his work.

RETURN OF THE MOORS TO AFRICA.
In 1492, however-from three to four years, according to our calculation, before
Leo was bornthe last stronghold of the Moslems in Spain,

INTRODUCTION.
chronicler is by no means charitable to the infidels. But Padre Bernaldez, the Curate of Los Palacios, disposes of them in a manner less creditable, though possibly his statement is an accurate account of what happened in some cases. "For", remarks this historian,2 "the Christians shipped the men, gave them a free passage, and sent them to the devil." 1 Cronica de los Moros de España (1618), pp. 634-641. 2 Reyes Catblicos, cap. 165 ; cf. Prescott, History of the Reign of Ferdinand and Isabella (Kirk's edition, 1890), p. 467.

INTRODUCTION.

Religion, nevertheless, sate easy on the Spanish Moors. Thousands had been more or less voluntarily converted by the liberal-minded Talavera and the more bigoted Ximenes, and outwardly at least performed the duties of their new faith. It was not until 1610 that Philip the Third, at the instigation of the fanatical Archbishop of Valencia, deported the remnants of the race which still conformed to the creed of their fathers, retaining as slaves a certain number to expiate their offences against his sovereignty by toiling in the galleys, or dying by inches in the mines of Peru. In the execution of this "grande resolucion", as the King termed it, about a million of the most industrious of the "Morisco" inhabitants of Spain were hunted like wild beasts, and banished to Africa, with every concomitant of barbarity. Many, indeed, were slain before they could reach the coast. The crews in many cases rose upon them, butchered the men, violated the women, and threw the children into the sea. Others, driven by the winds on the sandy shores of Barbary, were attacked by the marauding Arabs and slaughtered, despite their creed or their nationality; for apeople who killed or enslaved every shipwrecked seaman, and every tribe of which was at war with the other, were not likely to bestow much esteem on castaways in Spanish garb, speaking Arabic with a Castilian accent, and whose previous history did not altogether clear them of the taint of renegadism. Few escaped maltreatment and robbery; and those who managed to reach the shores of Morocco, Algiers, or Tunis arrived penniless, and only to find that there was no place for them among their less effeminate kindred. Many, disheartened with the coldness of their co-religionists in the cities, wandered into the desert and perished from privations and hardships which their life in Andalus had little fitted them to endure. It is therefore by no means incredible that, in one expedition in which 140,000 "Moriscos" were carried to Africa, upwards of 100,000 suffered death within a few months of their leaving Spain.'

But at the period when the father of little Hassan, son of Mohammed, crossed the Straits of Gibraltar, there had been little cruelty of this kind practised. The Moors had fought, won, fought again and lost; and latterly, though they remembered the evil fate which had lost them a country that only the industry of their fathers and the enlightenment of their sovereigns had made fairer and more fertile than that to which they were driven, they cherished no particular hatred towards the Christians for recovering what seven centuries before had been wrenched from their grasp. It
was, as La Valette remarked to Dragut, the corsair chief, as he saw him labouring at the galley oar in a Maltese harbour, "Usanza di guerra"-the way of war. 'Davida, Vida de Felipe I, p. 146.

INTRODUCTION.
And so, with the happy fatalism of their race they kept the keys of their Granada houses, and cherished -as some of their descendants are still said to do- the title-deeds of their ancient property, praying every Friday to Allah to restore them finally to their ancient homes. If there was any special venom, any dislike more pronounced than that which the vanquished must ever feel towards the victor, it was directed less against the Christians than against their own Sultan, who, to use the words of his mother Ayesha, wept like a woman for the loss of what he could not defend like a man. His nomad subjects despised him: his life was even in danger from them. It is therefore not unlikely that this circumstance, quite as much as weariness of governing, led to his resolution to sell for a sum of money the Alpine kingdom which he held as a vassal of Ferdinand and Isabella, and next year follow into Africa his kindred, who had already proceeded thither. Al-Makkari is perhaps not unjust to the "Infidel King" when he affirms that the latter did his best to expedite his old rival's departure. The after-career of Boabdil is very obscure, and the statements regarding it extremely contradictory. Almeria was the port from which he set sail, and Melilla the one at which he landed in Morocco. It had been his original intention to fix his residence at Marakesh (the City of Morocco); 1 I have heard this picturesque tale in Tetuan, Tunis, and other towns of Barbary. But I have never managed to see either the keys or the parchments.

INTRODUCTION. xi
but hearing on his arrival in Africa that the provinces of that part were sadly afflicted by famine, pestilence, and other calamities, he is affirmed in one version to have taken up his residence at Fez, where he settled with his family and adherents, and built some palaces in imitation of those of Granada. Al-Makkari adds that this hapless Sultan died in Fez in the year 940 (A.D. 1538), and was buried in front of the mosque which stands outside the Bab ush-Sharf (the Gate of the Law).

But more recent researches tend to show that Boabd'il in reality sought and received an asylum from Abu 'Abd Allah Mohammed eth-Thabit, Sultan of Tlemcen, and there remained until his death in A.H. 899 (A.D. 1494), according to an inscription on a tombstone, now in the museum of the famous city, where the fallen King of Granada survived, for so short a period, his unmerited misfortunes.

The conditions of the capitulation of Granada were liberal beyond anything which could have been expected of Spain or of the age. There was actually nothing to prevent any Moslem from living in the full enjoyment of civil and religious liberty under Ferdinand and Isabella, for every right of property and conscience was by the treaty to be rigorously respected. No doubt, at a later period, many of
its conditions were shamefully ignored. But at the date when the family of our author
1 A corruption of Abu ’Abd Allah (Mohammed), his full name.

INTRODUCTION.

passed the Straits of Gibraltar, this persecution had not begun—a fact which it is
necessary to remember in connection with the entire lack of bitterness displayed
by him towards the Christians, for in spite of diplomatic reserve this would have
appeared in his writings; as well as the readiness he displayed at a later date to
adopt their creed to advance his own interests—a practice which had never been
uncommon in Granada.

The self-expatriated Moors of the better class were, however, readily received in
the different Barbary Courts. In Morocco especially—then beginning to be racked
by the civil war between the Beni-Marini and the Shereefs—owing to their skill in
military operations, and in various crafts little practised at the time in Maghreb al-
Aksa, they were welcomed much more warmly than were their brethren a century
later. Fez was their favourite place of residence, and, as Leo tells us, they built
and re-peopled several towns in the vicinity. To this day the descendants of these
immigrants, many of them bearing markedly Spanish features, and like Sid Hajj
Mohammed Torres (the present Commissioner of Foreign Affairs at Tangier),
having Spanish names, are still pointed out as "El-Andeless". Soforo, between Fez
and Mekines, is said to have been built by them. Curiously enough, Leo never
mentions Boabdil, although his father was this king's immediate adherent, and
despite the probability that Leo was in Fez at the time of the ex-monarch's
residence in that town. This reticence is much to

INTRODUCTION.

be regretted: for we possess but scanty information regarding the latter days of
these Andalusian Moors in Morocco.

The Sultan left two sons, whose descendants less than a century later were little
better than beggars at the mosque doors; and to this day humble folks are pointed
out in Morocco who claim to be "Benis-Sulta.ni-l-Andalus"—sons of the Sultan of
Spain though many of these are not actually the descendants of Boabdil, but of his
uncle and rival, Sultan Az-z .ghel, who also settled at Tlemsen.'

CONDITION OF MOROCCO IN LEO'S DAY.

At the period when Leo was brought to Africa, the empire of Morocco was in a
condition of political disintegration and moral decay. The Kingdom of Fez was
held by Mulai Said. But in the South the Shereefs, who afterwards obtained entire
possession of the country, were beginning that movement which resulted in
Morocco, Sus, and Tafilet becoming independent sovereignties, only to be united,
nearly two centuries later, by the ruthless genius of Mulai Ismail, who made a
desert, and called it peace.

But in 1500 the Portuguese had possession of all
1 M. Brosselard, formerly Prefect of Oran, seems to entertain a contrary opinion.-
Mmoire i 2 pgraphique et historique sur les tombeaux des imirs Beni Z eiyan et de
Boabdil, dernier roi de Grenade, dicouverts a' Tlemcen (1878), pp. 159 et seq.
INTRODUCTION.

The best parts of Morocco, and were gradually extending their outposts into the interior, with the intention of seizing Marakesh. This design, as well as the capture of Fez, they would unquestionably have accomplished, had not Dom Sebastian's death and defeat on the plains of El-Ksar el-Kebir (1578) discouraged any further aggression.'

To add to the misfortunes of the empire, syphilis, which has since then sapped the vitality of the people, had been introduced by the immigrant Jews. From Leo speaking of the smoking of keef or hashish as a Tunisian practice, it may be inferred that this vice, now practised throughout Morocco, had not then become general. Piracy, which assumed its greatest proportions and was conducted with most success when the Moors were finally expelled from Spain, had not then taken root in Morocco.

But though Morocco was then barbarous compared with Spain, it was perhaps at the zenith of its fame as a land of learned men. Fez, at that time a far more opulent city than at present, was the seat of Arabic learning, to which students resorted from all parts of Islam; and its libraries, as well as those of the City of Morocco, were famous even in Cordova and Granada. A fresh stimulus to the actual locality of this famous fight—the "Battle of the Three Kings," the subject of George Peele's drama—was near the Wad Mkhamsen.

The origin and history of Moroccan piracy I have fully discussed in the Introduction to the Adventures of Thomas Pellow (1890).

INTRODUCTION.

Must certainly have been imparted to this regard for learning by the arrival in Morocco of so many cultured men from Spain. Even for some generations subsequently—actually, indeed, until the civil wars following Mulai Ismaiil's death—Morocco still held some men of learning, such as Ibn Madin, whose wise maxims may be read in the elegant version of Dombay; AlPetrage, who demonstrated the obliquity of the ecliptic, and discovered the fallacies of Ptolemy's hypothesis; and the Jew physician and philosopher, Avenzoher (Abu Merw. n 'Abd el-Malek Ibn Zohr), one of the ornaments of the Court of Yusuf Ibn Tshfin, for whom his "Teicyr", or the method of regulating diet and preparing medicines (known in Europe by the Latin version of "Paravicus") was composed. This man was, according to Leo, the pupil of the still more illustrious Averrhois; for though the latter, like most of the literati mentioned, was a native of Spain, he passed some years in Fez, where (in the middle of the twelfth century) his coreligionists lived tranquilly, and made money even more rapidly than do their persecuted descendants of these less liberal days. The fact of such men leaving the cultured courts of Seville and Cordova to take up their residence in the ruder one of Morocco, shows that the offers made to them by the African Sultans must have been of a most tempting nature. About
the same period AverrhoEs himself (Abu Walid Mohammed Ibn Roshd) came from his native town, Cordova, to be the physician

INTRODUCTION.

and friend of Yakuib el-Mansfur, whose orthodoxy was somewhat shocked by the philosopher's views regarding the creation of the world, the divine knowledge of particular things, and the future of the human soul; nevertheless, the last of the great Moslem philosophers ended his days in honour in Morocco. 'Ali 'Abd ul-Hasan was one of the great astronomers and travellers of Morocco at the beginning of the twelfth century; and though Ibn Sabin of Murcia and Ceuta was not worthy of being ranked along with Averrhoias, he was liberal enough to find a temporary retirement in the farther East necessitated by the dictates of prudence. But emphatically the greatest, and also one of the earliest, of Moroccan travellers, was Ibn Batuta, of Tangier, though in accuracy he was far behind Leo; while Mohi ed-Din Abu Mohammed 'Abd el-W hid Ibn 'Ali et-Tamimi el-Morarakoshi (I 185), who was educated at Fez, and wrote a History of the Almohades of Spain, is worthy of being ranked with Ibn Khalidoun, the historian of the Berbers, who also lived for a time in the northern capital. Ebn Abi-Zere', whose Kartas Sagir forms our almost sole authority for the history of Northern Morocco prior to the fourteenth century; Ahmed Shebab ed-Din, another native of Fez, who wrote an abridged universal history; and Ibn Adharl, who flourished soon after El-Morarakoshi, and was the author of a Chronicle of Spain and Africa up to the close of the thirteenth century, were also among the literati

INTRODUCTION.

of the country. Nor, of course, should Edrisi be forgotten, in recalling the famous savants of a land in which there are now none to carry on the old traditions; this most illustrious of ancient geographers was a native of Ceuta. Among the few modern scholars of any note are Abu-l-Ka.sem ben Ahmed Ezzi~ni, and Mohammed es-Seghir Ibn el-Hajj ben 'Abdillah el-Oufrani. The former wrote Elordjeman elno'ariib 'an douel el-machriq ou'l maghrib, or " The Interpreter who expresses himself clearly upon the Dynasties of the East and West." The latter is known from his history of the Saadian Dynasty in Morocco (51,-1670). Both books are of the utmost value to the historian of the empire, and go to prove that well into this century a regard for the past lingered in a land where nowadays it is rare to find any learning at all.

For fully a century after Leo's arrival in Fez, learning was held in such esteem that Mulai Ahmed I I El-Mans ir, who defeated Dom Sebastian, maintained a friendly correspondence with Philip II of Spain, by whose intervention the noblemen taken at the Battle of El-Ksar were released from slavery. In return, Spanish painters and architects were

1 A part of this work was translated in i886 by M. Houdas under the title of Le Maroc de 1631r a' 8z2. Ezzi~ni, who died at Sidi-bu-Medin, near Tlemsen, also wrote a Life of Mulai 'All esh-Sherif, which it is hoped may yet be translated into some European tongue.
INTRODUCTION.

despatched to Morocco; and by them many of the public buildings and decorations in the palaces were executed.

As late as 1535—not 1540, as often affirmed—Nicolas Clenard, the celebrated grammarian, spent a year and a half in Fez, for the purpose of profiting by its libraries and learning; and from that town he dates several of his letters, the Latinity of which approaches in elegance the style of a more classical age.' In Clenard's day, there were many men of letters there, and grammar was taught in the schools, though most of the studies related to religion and religious ceremonies; and to this day the Arabic spoken in that city is better than in other parts of the empire. But Clenard found no booksellers at the time of his visit, though he tells us that at certain seasons of the year book-sales were held on the Friday in the great mosque.

However, at the beginning of the sixteenth century with which these notes are alone concerned, there was an abundance of Arabic scholars in Fez, provided not only with the best writers in their own

1 Nicolai Clenardi Peregrinationum ac de rebus maohometicis Epistolae elegantissiniae. His unlatinised name was Nicolaes Cleynaert van Diest. Reisbesch." in Bibliog. Adversaria, vol. i, p. 37. A note on his works may be found in Playfair and Brown's Bibliography of Morocco, No. 48 (R. G. S. Supp. Papers, vol. iii, part 3, 1893).
Marabout, "Santo," or holy 1 Thus, in describing the letters and character of the Arabians, he has an allusion to Latin historians of African manners, which may refer to Sallust or Livy; and he also criticises the Natural History of Pliny.

INTRODUCTION.

man, of whom there has always been a plethora in Morocco—Leo found among his followers one with whom he "had old acquaintance and familiaritie: for we were certaine yeares fellow-students together at Fez, when being of one standing and seniority we had that booke of the Mahumetan religion expounded, which is commonly called the Epistle of Nensefi".i Again, among the Berbers of "the mountaine called Seusaua", who, in spite of their brutish and savage life, cherished "abundance of learned men and of skilful lawyers, whose counsell they use at all times", he met with "some who had heretofore been my fellow-students at Fez, and for our old acquaintance sake, gaue me most courteous entertainment: and, to the end I might escape the danger of theeues, they conducted me a good part of the way".

The affluence of his family, as well as his habits of life while a student, are shown by the fact that he lived for four summers in the ruined castle of Hubbed, on a hill six miles from Fez, "because it standeth in a most pleasant aire, being separate from concorse of people, and a solitarie plain fitte for a man to studie in: for my father had got a lease of the ground adjoining to this castle from the gouernour of the temple, for many yeeres". This Hubbed, I may here remark (as it is so directly connected with the early life of Leo), is a place once noted as the residence of a "Marabout", who was I 'Akdid en-Nasafi, a well-known theological commentary.

INTRODUCTION.

the first fakth of the great mosque of Fez. But, as noticed by our author, it was in ruins at the period of his stay, having been destroyed in the Said wars, about seventy years before the period to which he refers.

Leo seems also to have performed the customary pilgrimages, though he does not appear ever to have gone to Mecca, otherwise so notable an event would have been alluded to by a traveller not addicted to hide his light under a bushel. Albeit, he was at Jeddah and elsewhere in Arabia, and it may therefore be reasonably supposed that he crossed the HijAz. He tells us that, as a child, he joined with his father in making the great Fez pilgrimage to the shrine at Thasia of a most holy man, who is reputed in the time of 'Abd el-MUimen (that is to say, about the middle of the twelfth century), "to haue wrought many miracles against the furie of lions". After "being grewne up to man's estate", he repaired thither, to make supplications to this saint, who is supposed to have been Sidi (or Mulai) Buaza. He also fell in with the practice of visiting "a certaine aged sire", whom the people of Teza "adored as if he had been a god". But even at that early date Leo had begun to form opinions for himself, since a single visit served to disabuse him of any other opinion than that, like most of the "marabout" order, this "certo vecchio" was little better than an impostor, who "deluded the fonde people with strange deuises".
INTRODUCTION.
LEO'S EMPLOYMENTS.
When a young man he acted for two years, at a salary of three ducats per month, as notary (notajo) in the "Morestan", or Strangers' Hospital, in Fez, "secondo l'usanza de' giovani studianti". From this remark, which is curiously enough omitted in most of the translations of Leo, it would appear that the students undertook the duty of making the wills, and generally playing the "man of business", to the patients in this "spedale per li forestieri infermi". He also in the course of his travels repeatedly acted in a similar capacity, or, as a Thaleb learned in the law, officiated as Kadi in various towns where no one endowed with the necessary knowledge resided. Thus, in the course of his travels with a "Seriffo or Mahumetan priest", he arrived at "Ileusugaghen, a town of Hea", and there, "because the Seriffo had brought no lawyers with him, nor any judges to decide controversies, he would needes that I should take that office vpon me"; though, unfortunately, his decisions ended in "such a bloodie and horrible conflict" among the litigants, that the peacemakers thought it wisest to quit the town. At Samede he fared not much better. Here he served as judge for nine days in a place so illiterate that, in default of anyone capable of acting as clerk, he had to serve in this capacity, in addition to being the arbiter in the manifold quarrels which it was their custom to always refer to any passing stranger; but the end of all their promises of paying him handsomely for his trouble was, that he had to be content with what is known in an American backwoods store as "produce". One gave a cock, another some nuts and onions, a third a handful of garlic. The wealthier bestowed on him a goat; but as there was not a farthing of money in the mountain, the amateur judge, who had been awake all night wondering how much gold he would receive for his pains, obtained not even a piece of silver, and was fain to recompense his host with the goat, fowls, and garden stuff with which he had been obliged to be contented.
At Medea (Medut), however, he was in better luck; for not only was he sumptuously entertained, but for his two months' services he received two hundred ducats; and had not his engagements forced him to depart, he would have been willing to remain there all the rest of his life. When he was first asked to act as judge he was not more than fourteen or fifteen. But even at that early age he wore white robes, "being such as the learned men of our country are usually clad in". It was at this date (1510) that he travelled with a "Sceriffo", that is, a Shereef or descendant of the Prophet, though it is now impossible to
say for certain who this "My Lord Sheriffo" was; since in Morocco, as in all other Moslem countries, these kinsmen of Mohammed, real or reputed, are extremely numerous, and not always reputable.

He appears also in the course of his travels to have been a merchant, or to have travelled with merchants, to whom possibly he acted as clerk or notary, reducing their transactions to writing, keeping their accounts, and generally assisting in the legal part of their business, at the same time indulging, we may infer, in his own little speculations. Thus he describes, with much graphic power, the romantic adventure which befel him in the Atlas, when "vpon a certaine day of the month of October" he was "travelling with a great companie of merchants", and had, moreover, "a certaine summe of gold " about him. On another occasion, while on a voyage to Egypt, he tells that they bought from the Bedouins of the coast of Cyrenaica and Barca, some sheep and butter (alquante de' lor castrati e butirro).' Then, having shipped the merchandise, "we betooke vs to flight, fearing lest we should haue beene met withall by the Sicilian and Rhodian pirates"; and the translator adds, with that freedom which he takes much too frequently with the original, "beene spoiled not onely of our goods but of our liberties also". He was, after the manner

I This passage has been erroneously translated by Pory, who task che castrati to mean "Eunuchs or gelded men".-E. D. R.

INTRODUCTION.

of the age and the law of the land, a soldier also, "et militavit non sine gloria."
For, from the frequent allusions to the "Portugals", and the wars waged against them during their persistent aggressions in Morocco, he evidently took part in several of the expeditions of the Sultan Mohammed VI, who reigned in Fez (1508-1527) during the active years of Leo's residence in the country. Thus he expressly tells he was "serving the King" in the expedition of Mohammed against Azila, when the city was actually taken, and would have been held, but for the arrival of a Spanish squadron generously sent to the aid of Vasco Coutino, the governor, and Juan de Meneses, the commander of Tangier, by Ferdinand of Castile. This was in October 1508, when Leo was a boy of fourteen. Seven years later-on the 24th of June 1515-he was present at the disastrous attack which Antonio de Norofia made upon Mamora, where the Portuguese suffered heavily at the hands of the Moorish army, led by Mulai Ngser el-Watas, the Sultan's brother. Like his uncle, Leo was entrusted with diplomatic missions at an early age. Thus, in 1509, he saw at the distance of a mile, being "mounted upon a swift courser", the defeat and slaughter of the Moorish archers by the Portuguese under the walls of Bulahwan (Tabulawan), having been sent by the King of Fez "to declare unto the King of Morocco, and unto the Seriffo, that the King of Fez, his brother, was presenty to depart unto Duccala: for

XXV

INTRODUCTION.
which cause they were requested to provide soldiers for the better resistance of the Portugal army—an expedition by no means fortunate for Mulai Niser. Then, in 1512, he accompanied the same King of Fez-viz., Mulaf Mohammed VI on his expedition to "Elmadina, a towne of Ducala"; and, on the King's return to Fez was despatched "as ambassador" to Morocco. At that period Naser Bu Shentrif was the nominal King of Morocco. He was a relation and vassal of the King of Fez. But the actual rulers, and most influential people in the country, were the old Shereef, Hassan Ibn Mohammed and his three sons, more especially Mohammed, who had been tutor to the sons of the King of Fez. Just then, under pretence of arousing a holy war against the Portuguese (who under Fernando d'Atayde, governor of Saffi, Pedro de Sousa, governor of Azemor, and the renegade Arab chiefs Yahia and Mamun, had approached almost to the walls of Morocco city), these chiefs were insidiously strengthening that hold on the southern part of the empire which, before many years had passed, enabled them to establish the dynasty of the El-Hoseini Shereefs as masters of Morocco. It is not unlikely that the "Seriff" whom Leo accompanied on various travels about the year 1510 was a member of this family, and that their purpose was to assist in the propaganda mentioned. It was in 1512, also and in the same expedition, no doubt, already mentioned— that Leo shared in the hostilities which Mulai Mohammed of Fez waged against the Arabs of the plain, who were in the habit of harassing the pious inhabitants of the Iron Mountain, north of Mogador (p. 369).

As a troubadour, the versatile Granadian, at the age of sixteen, was also not without merit; he so charmed a Berber chief of "the mountaine called Tenuenes", in the Atlas, with his music, that though this "signore" did not understand Arabic, he, "for a recompence of his verse", presented Leo with a good horse and fifty ducats. On his 1512 embassy to Morocco, he seems likewise to have displayed his literary powers. For when at "Hadecchis, a towne of Hea" (p. 233), he was entertained by a "certaine courteous and liberall-minded priest", to whom, finding him an enthusiast regarding Arabic poetry (certain erotic forms of which were much cultivated in Fez University), Leo read "a certaine briefe treatise as touching the same argument: which he accepted so kindly at my hands that he would not suffer mee to depart without great and bovntifull rewards". In short, he had got a patron, and the "dedication fee".

It was a day when the scholar could not live by his scholarship; and we may take it that, when not engaged in trading, or fighting, or diplomacy, or acting as Kadi or notary, the Thaleb was hawking verses of his "certain briefe feature", or the like, among the Courts which he visited; for rich men, even when not lettered themselves, loved to encourage men of learning. Nor does our author appear to have been at any period fanatically
patriotic; for we find him visiting Tumeglast in company with Sidi Jeje, who, as "gouernour over all that circuit called by them Azafi", went thither "to gather up the tribute of the countrie on the behalf of the King of Portugall", against whom Leo had been fighting on other parts of the coast. 1

As Leo was only fourteen when he met this renegade Moor, whose identity we shall presently discuss, it is probable that the journey mentioned was made in the capacity of notary or clerk to a less literate envoy sent to treat with this personage, whose proceedings in the years succeeding 1508 seriously alarmed the Kings of Fez and Morocco. Indeed, it is open to believe that many of his wanderings were undertaken as an allachdof this sort, either to government functionaries or to private merchants.

This theory of Leo's business is rendered the more probable from our finding him in 1506 at Tefza (Kasba Tadla, according to my identification) with the official sent thither to receive the fifty thousand ducats' fine from the Jews, who "were said" to favour the King's enemies. He notes, moreover, with a knowledge which is almost professional, the

I Pory, following Florianus's imperfect translation, takes leave to characterise Sidi Jeje as Leo's "deare friend". There is no such expression in the original. "Io fui", he writes, "in questa terra alloggiato con Sidi Jeje, che era venuto a riscuoter li tributi di quel paese in nome del r di Portgallo, dal quale era stato capitane della campagna di Azafi."

INTRODUCTION. xxix

capacity of people for paying, and the difficulty or ease with which money is to be got out of them. Thus, "no people are slower" than those of Efza "for paying of debts"; albeit, like these easy-going folk all the world over, "they are most liberall and courteous". And this he knew: for "my selfe was in this towne when the King's army lay in Tedles, and then they yeelded themselves to the King", which places this visit about the year 1512.

LEO'S TRAVELS.

So little is known of the career of Leo, except what he incidentally tells us in the course of his narrative, that it is difficult to give a consecutive account of his roamings, and very often one is tantalised by a casual remark which shows that he travelled in distant regions, but the particulars of those journeys it is now impossible to obtain. Here and there, however, we come upon a date, or can fix the occurrence of particular events by inferences which bring us into the beaten track of history. Few as these landmarks are, we can say with confidence, that though as a child he made acquaintance with various parts of Morocco on the pilgrimages he made with his father, his first active employment was at the siege of Azila, when he was about thirteen or fourteen. This must have been his age, since he declares that he was twelve at the date when Saffi fell into the hands of the "Portugals". This was in 1507 or 1508, for the

xxx INTRODUCTION.

preliminary hostilities continued for some time, and Leo is a little vague, like most Moors, about his exact age at the time the events in question were being
enacted. It is, however, just possible that he refers not to the actual capture of the place but to the building of the fortified Portuguese "casa", which "castle" (as Pory translates the word) was avowedly erected to help the designs of the Portuguese merchants on the city. In any case, if he was fourteen when he made the acquaintance of the "governor della campagna", speaking with him "per nome del re di Fessa e del Serif principe di Sus ed Ea", we must antedate his birth by at least three years. He mentions that the governor, or "capo", of Saffi when the place was taken and all but he fled, was called "Jeja". As the same person is named on p. 67 as following the occupation to which he had been appointed by Emmanuel the Fortunate of Portugal, under the name of "Jeje", "governour ouer all that circuit called by them Azafi", Leo, if he conferred with him "in the name of the King of Fez and the Prince Sheriff of Sus and Haha", must at the age of fourteen, in the same year that he was at the siege of Azila, have been either an allachd of some sort, or as an envoy been entrusted with the conduct of diplomatic affairs. But as Saffi was taken in 1507 or 1508, and Leo's acquaintance with "Jeje" began after that event (as we must infer from the context), Leo, if he conferred with him "Governor of the country", i.e., round the town of Saffi.

INTRODUCTION.

his conference could not have taken place much later than 1509 or 1510. A word or two may fitly here be said as to the identity and history of the so-called Jeje.

Turning to the annals of Portuguese relations with Morocco, we find that when Saffi was disputed by the factions of Abd er-Rahman (who had established a kind of -monarchical republic in the city) and the chiefs 'Ali Ibn Gesimen' and Yahia Ibn Tafut, the former sought help from Portugal against their rivals. This was granted by King Emmanuel, but only on the condition that the Christians should be permitted to build a factory, or fondak with a gate to the sea, and a tower for their better security. This was agreed to, with the result that the Portuguese took care to convert their "casa" into a veritable fortress, well provided with small-arms and artillery smuggled in among goods. These preliminaries being speedily

1 " Hali sonne unto one Goeseman," as Pory translates " Ali figliuol di Guesinen", or, as Marmol names him, "Ali Ben Guccimen". In the Africa Portuguesa of Manuel de Faria y Sousa (1681, vol. i, p. 77), he is called "Cide Alia dux", or, a few lines later, "Haliadux", while his coadjutor is named "Cide Haya Abentaful", while " Azaafe " (Saffi) is then declared to be "con alguna corrupcion dezimos Zafin" (p. 76). He is the "Yahaya Aben Tafuf" of Marmol. Finally, to end these citations of misreadings of two well-known names, in Diego de Torres' Relacion del origen y sucesso de los Xarifes (1586), from whom most of his successors have borrowed freely, "Cide Haya Abentaful" and "Cide Hali" are the titles given to the two chiefs.
settled, the Portuguese took the first opportunity they could find for picking a quarrel with the Moors. The old allies of the Christians offered a stout resistance to their treacherous friends, who had so distinctly played the part which the Saxons acted in England; but on the arrival of Garcio de Melo and Diego Azambuja from Mazagan with troops and three "caravelas", further resistance proved useless, and Ali with most of the people sought safety in flight. But Yahia demanded to be sent to Lisbon that he might explain his conduct; and in this he was so successful that he returned, as Leo correctly states, as ruler of the native tributaries in the adjoining country, with the title of General. In the succeeding years he did admirable service to his Christian master; for in rapid succession he subdued Dukkala and part of the province of Haha, and defeated in succession the troops of the King of Fez and of the Shereefs of Haha and Sus. He had even the temerity to plant his lance on one of the gates of Morocco city, though nothing more came of that venture. In 1519, however, after a chequered career, in which jealousy, treachery, and injustice played a large part, he was, to the irreparable loss of the Portuguese, assassinated. Some contemporary chroniclers are inclined to believe this was done at the instigation of the Shereefs; though considering the dislike which his amazing success, and his favour with the King, had won for him, the chances are that Nufio de Mascareñas, who had succeeded Nufio de Altayde

INTRODUCTION.
travelled was possibly Ahmed, the second son of Hassan Ibn Mohammed, who had been appointed a Professor in Fez University, and who was therefore in all likelihood one of our author's teachers. He was with him at Ileusugaghen in Haha, at Tefetni, "a fortress upon the ocean sea", in the same province, in the mountain "called Ideuacil"

-probably Idaouicar, a part of that westward spur of the Atlas which ends at Agades-and in other localities where it is known that the Shereefs were looking to their own interest about that period. Thus he was in Sus when " My Lord the Seriffo bare rule over it"; and at Tagovost he remained thirteen days with the "Seriffo his principal chancellor, who went thither of purpose to buie certaine slaves for his Lord". But as he mentions that this was in the year of the Hegira 919 (=A.D. 15131), the journey in question must have been made at a later date. In 1511 (A.H. 917) he was on his way from Draa to Fez, and next year he was at Dedes, a place which he heartily disliked. But he could not help himself; being "commanded by one to whom I was in dutie bound to travell [from Morocco] to Segelmessi, I could not chose but come this way".2 Who was this person to whom Leo was

1 Not 1510, as Florianus and Pory add; for Leo seldom gives the equivalent in the Christian era, and then not always correctly, while his translations are frequently inaccurate.

2 " Ma mi vi convenne passar, mentre andai da Marocco a Segelmesse per obbedir a cui era tenuto." The "from Morocco" is omitted in most translations.
xxxiv

INTRODUCTION.

compelled to yield obedience by going on a journey he cared so little about? In all probability it was undertaken on behalf of one of the Shereef's sons Ahmed, if my supposition is correct; for at that time the old Shereef lived in the Draa country on the other side of the Atlas in a " Kasba" or fortified hamlet called Tegumedat or Tamugardert, not far from Segelmessa.

It was in 1512, also, that Leo made his diplomatic visit to Morocco (p. 297); and in 1513 he returned, evidently from Tunis, to see his friends in Fez (mia pairia).

The rest of that year, and the following one well into 1515, have to be accounted for; and if our calculations of the year of his birth be not wide of the mark, these were appropriated to the journey which he made with his uncle to Timbuktu and other parts of Central Africa. He was then sixteen; and allowing that he was close on seventeen, and that the journey was begun in 1513, this date would fall in fairly well with his having been born in 1495-6.

He must, however, have returned by 1515; for in that year (p. 412) he was at the attack on Mamora, and at Etiad, in the same year, he was "once entertained by a preest".

As Leo tells us that he was at Mamora a little

I "Alloggiato in casa del sacerdote della terra." Perhaps "sacerdote" might be better translated " a reader of the law", or "a member of the Ulema"; for in Morocco, as in all other Moslem countries, priests in the Christian sense of the word are unknown.
INTRODUCTION.

time before he made his journey to Constantinople, this must have been made either in 1515 or in 1516; and as he tells us that it was his "hap thrice to travell into Egypt since Selim the Great Turk conquered Egypt", he must have made these three journeys after 1517, which was the date of the capture of Cairo; moreover, as his description of Egypt under the Mameluks bears the impress of personal knowledge, we are free to infer that between 1515 and 1517 he may have visited the country while on the Constantinople voyage. In another part of his work (Book iv) we learn that he was in Bougie in 1512, the same year that he was in Morocco, on his way to Constantine and Tunis. He also tells us that he heard of the defeat of Diego de Verras before Algiers in 1516, and of the death of Barbarossa in 1518. But it is not clear at what part in his travels these tidings, which he relates not very accurately, reached him.

The chronology suggested is the more likely to be accurate since we have still a variety of travels to account for. Thus he tells us that should it please God to vouchsafe him longer life, he proposed to describe "all the regions of Asia which I haue travelled, to wit, Arabia Deserta, Arabia Felix, Arabia Petrea, the Asian part of Egypt, Armenia, and some part of Tartaria, all of which countries I saw and passed through in the time of my youth. Likewise I will set down my last voyages from Fez to Constantinople, from Constantinople to Egypt, and from thence unto Italie, in which I journey I saw diuers and sundry Islands". He further lets us know that he was "carried' by mariners by water from Cairo to Assouan, with whom returning back unto ChanA [Kenneh] I travelled over the desert unto the Red Sea, ouer which sea I crossed unto lambuth [Yambo, the port of Medina] and Ziddem [Jeddah, the port of Mecca], two hauentownes of Arabia deserta, of which two townes, because they belong vnto Asia, I will not here discourse, least I should seem to transgresse the limits of Africa".

This explanation shows the route which he took, and the period at which the journey to Arabia was taken-namely, during one of his visits to Egypt. But we also learn that he was at Tauris (Tabriz), in Persia (p. 137), which was perhaps the "part of Tartaria" to which he refers; and as he was also in Armenia, the presumption is that it was during a journey in the latter country that he reached the city, which was then, as it is still, the great meeting-place for the caravans. Unfortunately, if he ever wrote any account of these countries it has long ago been lost.

His acquaintance with Morocco was obtained during the wandering life he led, while his less accurate, or at least less minute, knowledge of the other Barbary States seems to have been picked up during coasting voyages to and from Egypt and Constantinople, or while engaged in caravan journeys in the interior. In
these days merchant vessels called in at many ports for fresh food and water, to avoid pirates and stormy weather, or to

INTRODUCTION.

sell or buy the products of the different districts; so that in the course of voyages which were not fewer than six in number, he must have grown familiar with every town on the Barbary shore.

All his information regarding Central Africa appears to have been gathered during the long journey which he made with his uncle by the ordinary caravan route. At that period Timbuktu was in its glory; for the Songhay dynasty was not overthrown by Jaudar, the Morocco captain, for nearly seventy-six years after Leo's visit; so at that date (1513-15) its sovereigns were not in any way vassals of the Sultans of Morocco, as they became for a short period after the victory of Jaudar. On this expedition he passed through fifteen negro kingdoms, viz.---" beginning from the west, and so proceeding eastward and southward, Gualata (Walata), Ghinea (Djenne, Guinea), Melli (M'di), Tombut (Timbuktu), Gago (Gog), Guber (Gdber), Agadez, Cano (Kano'), Casena (Katsena'), Zegzeg, Zanfara (Zamfira), Guangara (Wangara), Burno (Bornu), Gaoga (Gagho), Nube (Nubia)?

Most of these, as he accurately enough remarks, are situated near the River Niger. But it is probable, from his giving accounts of other countries than those in the direct road to Timbuktu, that he returned by another route. He appears to show a personal familiarity with Bornu and Lake Chad (" The Lake of the Desert of Gaoga"), in which, erroneously, he places the source of the Niger. This portion of his work, though not the most accurate, nor that portion which is most fully compiled from his own observations, is valuable in so far that it enables us to ascertain the many changes which had happened since Edrisi described the same region from information brought to him by various travellers. Kan6 had ceased to hold its old supremacy among these Niger states, and had become subject to Timbuktu. Wangara had become independent, while neither Bornu nor Katsena then held the commanding power they afterwards obtained. Timbuktu, from being an insignificant principality, had, owing to the conquests of Mohammed ben Abu Bakr El-Hajj Askia (whom he erroneously styles King of Timbuktu), become a flourishing state, to which most of the neighbouring countries paid tribute, though Leo does not mention Askia's expedition against Agadez, of which he might have heard as easily as of those against Katsena and Kan6, which preceded the former by only two years. Otherwise, he seems to have been well informed regarding the great conquests of the personage whom he names Abubacr Ischia. It is, however, possible that the account which Leo gives of Agadez represents the condition of that town when he visited it, before Askia's
time, and not at the date when he wrote, his statement regarding the tribute of 50,000 ducats payable to the King of Timbuktu having been derived from later information. His account of Askia is also confused. "Having by warres in the space of fifteene yeeres conquered many large dominions, he then concluded a league with all nations and went on a pilgrimage to Mecca." But (as Barth has pointed out) Askia having ascended the throne of Gagho on the 14th of Jumada II, A.H. 898, began his pilgrimage in Safer A.H. 892, consequently in the fifth year of his reign. Yet Leo received information of his expedition against Katsena and the adjoining provinces which was made in A.H. 919.1

He also repeats many of the mistakes of Edrisi regarding the situation of the Niger kingdoms; and among numerous minor inaccuracies which I shall have occasion to note in their proper place, he even speaks of the ocean encircling the desert from Cape Nun to Gaoga, and gives an inaccurate position to Wangara in order to make it fit in with this view. In short, the leading defect of Leo's description—the lack of exact dates, and the uncertainty how far he is speaking as an eye-witness, and how far from second-hand information—is prominent in his book on the Niger kingdoms. His route, if we may determine anything from the order in which he takes up the different countries, was through the desert, and then along the lines followed by the Moorish caravans from Guinea (Ghinea) and Melli (Mdili), eastwards down the river to Timbuktu and Gagho, and thence across the desert to Gobes on the northern frontier of Hausaland; thence to Agadez, which is more easterly, Zegzeg and Zanfara, still more in the rear, till at length he arrives at Wangara (Guangara), in the remote interior. But he displays his imperfect acquaintance with Hausaland by setting Casena (Katsena) on the east, and Cano (Kan6) and Zanfara in like manner on the east of Zegzeg. Hence it is not surprising to find him placing Wangara on the east of Zanfara.

CAPTURE OF LEO AND His LIFE IN ITALY.
But it so happened that the cup went too often to the fountain; for on returning from what appears to have been a second voyage to Constantinople (which had then been for about seventy years under the Turks), he had the ill-luck to fall into the hands of some Christian (probably Venetian) corsairs' off the famous island of Djerba, the Island of the Lotos Eaters, and for three centuries later a favourite haunt of the Mediterranean sea-robbers. These pirates, finding that they had a person of greater learning than usual on board, carried him to Rome as a present to Pope Leo X (Giovanni de' Medici), in the hope, no doubt, of atoning by this pious act for a long accumulation of infamy. The exact date of this important event in Leo's life is not known. But as he made three
1 According to Ramusio, "alcune fuste di corsari". The religion of these pirates may be inferred from their subsequent proceedings.

INTRODUCTION.

voyages to Egypt subsequent to 1517, it could scarcely have happened before 1520 (certainly not in 1518, as Berbrugger fancies); and it was not later than 1523, as the Pope died in that year. We may therefore fix on 1520 as the probable year of his arrival in the imperial city. At that time Moorish slaves were common at every court, and Moorish guards then occupied in many of them the places afterwards taken by the Swiss. But Leo X, who was proud of being the patron of men of letters, when he found that his slave was a man of learning, and familiar with many strange countries, received him graciously, and not only immediately freed him, but gave him a handsome pension, that he might not have any inclination to leave him.'

But he naturally did more than this. For he immediately set about converting the Moor; and when one remembers the position in which the latter was placed, it is not surprising that his patron's efforts were speedily crowned with success. Thereupon he was baptized under the name of Giovanni Leone, the Pope standing as the new convert's godfather, and giving him his own name also.' There is little doubt that Leo's change of faith was dictated by self-interest. Even in our times, the conversion of Mohammedans, especially of Moors, is so rare that the exceptional cases are "E diede gli vna buona prouisione accib' egli non si partisse", according to Ramusio.

2 "... E indusse a farsi Christiano & gli pose i'n due suoi nomi, Giouanni & Leone" (Ramusio).

INTRODUCTION. xliii deservedly looked upon with profound suspicion. But at the close of the fifteenth and the beginning of the sixteenth centuries, they were so abundant that their insincerity can scarcely be doubted. In Granada, after the expulsion of the Moorish kings, fifty thousand consented to be baptized, though their relapses afforded in future years an endless amount of toil for the Inquisition. Under Cardinal Ximenes' policy of learned argument and costly presents, so many insisted on abjuring the creed of "false Mahound", that the good Archbishop had to baptize the perverts by means of a wet mop trundled over their heads. In this way four thousand were sometimes admitted into the Church in one day. During Leo's residence in Morocco he must have frequently heard of similar occurrences; and, moreover, as there were in these days many Spanish and Portuguese missionaries in the country, and even a few converts, besides numbers of very indifferent Moslems in Mazagan, Saffi, Tangier, and other of the towns in the Christians' hands, his change of faith could scarcely have troubled him greatly.' It was simply a necessity of the circumstantiality. MulaY Hamed, the last King of Tunis of the Hafside dynasty, retired into Sicily in 1573, and there adopted Christianity; and in 1622 Ajaja, son of the Bey Yusuf, died in Palermo,
where he had been voluntarily baptised under the name of Philippe, his godfather having been Philippe of Austria.-De la Rive, Hist. géne'rale de la 2Tunisie (1883), p. 289.

A Bishop of Morocco was appointed, and actually lived in the country as early as the thirteenth century. But though there were numbers of native Christians by the year 1544, the titular-

stances in which fortune had placed him; and an action, moreover, likely to be of material advantage to him. For in 1520 the great schism of Martin Luther had inflicted so serious a humiliation on the Papal court, that even the admission of a scholarly Moor was treated as a greater victory than it might have been accounted in more flourishing days of the Church.

The next few years of John Leo's life in Rome must have been extremely agreeable. To the literati of Pope Leo's capital, the arrival of so pleasant an addition must also have been

holder of that office resided either in Ceuta or in Seville.-Del Puerto, Mission historial de Marruecos, p. 140; Gramaye, Africa Illustrata, p. 56 ; Godard, Maroc et Revue Africaine (1857), PP. 124, 257, 433.

As late as the middle of the seventeenth century two Shereefs embraced Christianity. The first was Mula! El-Arbi, nephew of the Sultan Mulai Er-Rashid, and son of MulaY Mohammed; who, after fleeing to Larache, crossed to Spain and was baptised under the name of Augustin de la Cerda. The second was Mulai Mohammed Athasi (commonly described as the only son of the Sultan Mohammed IX; but he was more probably only one of the many Shereefs or princely descendants of the Prophet), who was captured on his way to Mecca by a Maltese galley under the command of Fray de Mendez. He was baptised in 1656 under the name of Balthazar de Loyola de Mendez. As late as the middle of the seventeenth century two Shereefs embraced Christianity. The first was Mula! INTRODUCTION.

an event. He had travelled further than any of them, and was familiar with lands then only vaguely known through Edrisi, Ptolemy, and other ancient geographers.

The chances are that he was more or less familiar with Italian before arriving in Rome. Spanish, we know, was among his accomplishments; and it would have been difficult for him to have travelled so much along the shores of the Mediterranean without attaining a vernacular acquaintance with what was then-as it still is in the upper portion of that sea—the language of commerce. However,
his Italian was never more than passable. Even in Ramusio's version it is far from
elegant, though not without a certain rude vigour, and a simple lucidity which
renders it difficult to mistake his meaning. Latin was, however, one of his Roman
acquisitions. He also taught Arabic—the most distinguished of his pupils being the
Bishop of Viterbo, afterwards Cardinal Egidio Antonini. In Rome, also, he would
appear to have written in Italian the work which is his chief claim to fame. No
doubt he had previously kept a diary or notes; for it is impossible that so
multifarious a mass of details could have been retained with such accuracy in his
memory. But that it was prepared in Rome in the form we
1 Ramusio tells us that during his long residence in Rome Leo learnt to read and
write Italian, and translated into that language the Arabic description of Africa
which he carried with him when captured. "The Pope . . . understanding that he

INTRODUCTION.

have it is certain, from the many references to events which occurred after his
arrival, and to authors with whom it is most improbable he could have been
acquainted, before Latin and the libraries of Rome opened up to him new fields of
knowledge; and, lastly, by the fact that he dates it as " written at Rome in the
yeere of Christ 1526, and upon the tenth of March "; or three years after Pope
Leo's death; thus making it less probable that His Holiness helped him with the
book.
The Pope was, indeed, too busy a man for any such unostentatious toil; and,
moreover, had he done so, would have insisted on a more polished version. The
book was, however, either wholly or in a rough draft, originally written in Arabic;
and though this version is not now known to be in existence, the M S. was at one
time in the library of Vincenzo Pinelli (1535-1601). The only version now extant
is the Italian, into which he himself translated the book from the Arabic; and even
this MS., though Ramusio had it in Leo's own handwriting, has disappeared, so
that the Edilio princeps is our sole authority for Leo's statements. Had the
original been accessible,' many moot points might have been settled.

Mr. S. Cock, the editor of the Narrative of Robert Adams, etc. (1816), appears,
from some remarks which he makes (p. 188), to have thought that the MS. was
still in existence. Even M. Berbrugger (Revue Africaine (1858), p. 362) is not
without hope

INTRODUCTION. xlvii

THE LATER YEARS OF LEO.
In Rome Leo lived for many years, though at times he paid visits to Bologna and
other cities. In 1550, when Ramusio published his Navigazioni, he does not
appear to have been a resident in the Pontifical city, or indeed in Italy. He is
merely described as having lived for a long time in Rome (cosi. abilb poi in Roma
"lungo lempo"); and this statement is repeated in the edition of 1554. But in the
I563, I588,' and subsequent editions-the latter issued many years after his death—it is affirmed, though without any authority being given, that Aot only did Leo live in Rome, but never set foot out of it for the rest of his life.' At all events, he was at work in the year 1541. How he ended his chequered career is not, and probably never will be, known. But, from an allusion in the works of a contemporary- Widmanstadt-it is conjectured that, hurt at the little consideration he received after the Pope's death, he took up his residence in Tunis (where he died in i552); and when last seen was once more quite as good a Moslem as he had ever been a Christian. There is much probabof the original MS. being found. Ramusio mentions to Frascatoro that the MS. came into his hands "after several accidents, too long to recount "-a fear for boring his friend which posterity must regard less tenderly.

"Tommaso Giunti," the printer, addresses an additional preface to the reader, from which it may be inferred that he was responsible for this edition.

INTRODUCTION.

Leo's contemporaries are so silent regarding him, that almost nothing is known as to his ways of life or character, beyond what can be gathered from the pages of his magnum opus. However, this is in many places so frankly autobiographical, that it is possible to piece together from various passages a fair picture of the man who was for nearly three centuries the sole authority on the geography of Northern and Central Africa. Whether he was a married man or a bachelor is not known: with a Moslem's reticence on such delicate subjects as his womenkind, he avoids the slightest allusion to the harem. Yet this could not have been through any regard for the susceptibilities of the priestly society in which he found himself at Rome; for the Court of Leo X and the Pontifical College in the sixteenth century were not so deeply tinctured with the prudishness of St. Anthony as to have counselled any reserve on marital matters. Indeed, had Leo been married, we should in all likelihood have learned the fact directly or incidentally, for he seemed to have been something of a gallant.

Nor was Leo without humour of a pawky type. He jokes, somewhat parlously, one might imagine, over the craze of one Pope for destroying the buildings erected by his predecessor, and hints that the "daintie cates" in the vegetarian monastery at Asouiat might be taken as a proof that the inmates, like the monks o' Melrose,
"had gude kail on Fridays when they fasted"—and perhaps during the rest of the week also. His remarks about the social evils in Egypt are those of a shrewd observer whose eyes were not blind to anything which concerned mankind. He is often frank to a fault; as, for instance, when he congratulates himself on seeing the rout at Bulahuan in 1513 mounted "on a fleet courser"—a confession of cowardice quite consistent with the practical character of the clerkly soldier, who considered it idle to throw away his life for an idea. Moreover, all through his book we find the same Mohammedan spirit of not "crying over spilt milk"—a recognition of the uselessness of fighting against "Kismet"—of the impiety of wailing against what "has been written" in the book of fate. He does not appear at any time to have been a bigot. Thus, as already noted, even when a

INTRODUCTION.

boy he was not deceived by the assumed piety of the "ancient sire" at Tessa; and his chief pleasure in the mosque was to see the people troubled with colds sneezing, and then all the other worshippers sneezing in concert, until it was impossible to hear the words of the preacher. Nor did he believe in the art of magic. His ideas of good government were ahead of his times; for he laments the tyranny which prevailed, and the civil broils which were the natural result of it; and he prophesies, with an accuracy only too well justified by subsequent events, that the universal avarice and corruption of men in authority would bring about contempt of learning and education, and thereby widespread ignorance, immorality and superstition, with the national ruin which would be sure to follow in their train. The mere fact that he denounced Islam for Christianity is to be taken more as a proof of his suppleness than of his open-mindedness; for at that period religion was considered by the Moors as a topload on the conscience, which might be tossed overboard as the worldly interest of the owner dictated. It may be taken that if Leo was of any creed, he was always at heart a Moslem; and if the person seen in after years in Tunis was actually he, then the convert of Giovanni de' Medici had, as almost always happens in such cases, reverted to his ancient faith in preparation for the visit of Azrael. But as long as he was nominally a Christian and a resident in Rome, the quondam Al-Hasan Ibn Mohammed cursed the Prophet with

INTRODUCTION.

the best of them. "The Mohammedan plot," "the pernicious foundation of Mohammedan law," and so forth, were the fine phrases by which this newly-made Christian referred to the belief which he had abandoned. Above all, the Moor was blessed with that happy adaptability which is the birthright of his race. Perfectly at home anywhere, and always "lovingly" entertained, ready to be African or Granadian, Moslem or Nazarene, as best suited the circumstances of the case, keen to note everything, and capable of telling what he had seen in a pleasant fashion, to trader or lawyer, soldier or judge, diplomatist or priest, each in his turn, with equal
readiness, Leo Africanus must have been a pleasant companion to travel with, and of all men the best fitted to traverse the interior of Africa.

LEO'S MISCELLANEOUS WRITINGS.

Among the known treatises which were written before his Description of Africa are the Lives of the Arab Physicians and Philosophers,¹ and a vocabulary of the Arabic and Spanish languages.²

1 "De Viris quibusdam illustribus ad Arabes Libellus Jokannis Leonis Africani," in J. A. Fabricius' Bibliotheca Gr&,ca, vol. xiii (Hamburg, 1726), pp. 259-298. Of the twenty-nine chapters, the last three are concerned with the Hebrew physicians and philosophers. Leo refers to it in the present work, p. 155, Bk. III.

2 This vocabulary Jacob Mantino, the celebrated Hebrew physician, mentions having consulted in manuscript (Ramusio).

INTRODUCTION.

According to his own statements, he seems also to have written-or intended to write-an Epitome of the Mohammedan Chronicles, a History of the Mohammedan Religion, and a collection of Arabic epitaphs from the burial-grounds around Fez, the MS. of which he gave to the king's brother; while we have already noted the fact that he had a project, which he does not seem ever to have carried out, of narrating his travels in Asia and Europe. "The divers excellent poems" which he wrote have likewise vanished.

His "DESCRIZIONE DELL' AFRICA": EARLY EDITIONS.

As we have already seen, Leo probably wrote his Description of Africa in the first place in Arabic; but after having learnt Italian, he seems to have rewritten the entire work in his adopted tongue; for this version, which is the one from which all the translations have been derived, contains allusions to events which occurred long after his capture, and bits of information, as well as allusions to authors with which he could not well have been acquainted prior to his residence in the Pontifical capital. This manuscript of the Italian version is dated from Rome, March 10th, 1526; but it was only in 1550 that Ramusio-the Hakluyt of Italy-was fortunate enough to obtain it for his collection of Voyages and Travels, in which, after Ramusio had edited it "with the utmost diligence he was master of", it duly made its appearance.¹ Of the fate of the MS. nothing is known, but there is every probability that it perished in the fire which, seven years later, destroyed so much of the material collected for Ramusio's second volume.

The period in which Leo's epoch-making contribution appeared was a stirring one in the history of exploration. In the year when it was being written the world had been turned upside down by wild tales of the new continent which Columbus and his companions had discovered. In 1497, the year in all likelihood which saw the family of Leo repatriated in Africa, Vasco da Gama had started on his successful voyage to India, by way of the Cape of Good Hope; in the following year the mainland of America had been reached; and in 1500 Pinzon had lighted upon
Brazil and its mighty rivers. Thirteen years later, Balboa, i' silent upon a peak in Darien", had sighted the Pacific; six years nearer Leo's time Cortes had conquered Mexico; and at the time our author was so quietly telling of regions then as little known as any in the New World, Pizarro and Almagro were partitioning Peru, and Soliman the Grand Turk was threatening Europe with the Moslem yoke.
Yet not a hint
1 In spite of Ramusio's editorial care, it is full of grammatical mistakes. The history of the manuscript is not given. It merely fell into his hands owing to a series of accidents, which it would take too long to recount-"I1 qual libro, scritto da lui medesimo, dopo molti accidenti che sarrano lunghi a raccontare, pervenne nelle nostre mani."

INTRODUCTION.
do we get of all these stirring events. Indeed, interesting and important as Leo's pages undeniably are, the reader is apt, when he remembers the feverish tidings which must have all the time been reaching Leo's ears, to hold at cheap appraisement his descriptions of petty princes and their states.

But in the middle of the sixteenth century the world was eager for news of any country "not Christian". Africa was then in an eminent degree a dark continent; for scarcely any portion of it was known, and the imaginative cosmographers who even at a later date in constructing their maps were compelled to dot their open spaces with "elephants for want of towns"-were adrift from the lack even of coast-lines. Men had, it is true, some vague knowledge of the coasts of Northern and Western Africa; and there were rumours, derived from Edrisi and Ibn Batuta, of Arab kingdoms on the east coast, and of others on the upper waters of a great river then beginning to be known as the Niger-which, however, was frequently confounded with the Gambia, the Senegal, and even with the Nile. About two hundred and fifty years before (1291), Ugolino, Guido Vivaldi, and Tedisio Doria had attempted the circumnavigation of Africa; but scarcely anything was achieved until the early part of the fifteenth century, when began the series of voyages associated with the name of Prince Henry the Navigator. In 1434-46, Portuguese seamen had skirted the edge of the Sahara, bringing rumours

INTRODUCTION.
of Timbuktu, Jenne, Congo, and the lands beyond; and various ships had crept down the west coast. In 1487 Bartolomeo Diaz had discovered the Cape of Good Hope, an event which, if known to Leo, is not noticed by him." In 1500 Diego Diaz had sighted Madagascar; and in 1550 Pannilini had penetrated Algeria for some distance. But the interior of the continent south of the old settled regions of the north, except for a short distance from the coast, was a terra incognita. How little was known of the interior may be gathered from the summary which Pory made fifty years later, as an introduction to his translation of Leo.

Ramusio's collection, to which we have already referred, went through several editions in three volumes, the first of which was devoted to Leo's involuntary contribution; these editions bear the dates 1550, 1554, 1563, 1588, 1606, and 1613.
In 1556, soon after its reappearance in Venice, the work was translated into French, apparently from the 1554 edition, though the voyages were not arranged in the same order as in the Italian original. This most sumptuously printed version 'In reality, Leo's work, though called a Description of Africa, is merely a description of those parts lying north of the Equator which were personally known to the Author and his informants.

2 Historiale Description de L'Afrique, fierce partie dv monde, contenant ses Royaumes, R'gions, Viles, Citis, Chdteaux et forteresses : Iles, Fleuves, Animaux, fant aquatiques, que terres/res .. coutumes, loix, religion etfacon de faire des habitds, avec pourtrails de leurs habis : ensemble auftres choses mimorables, et singuli res nouueautis: Escrie de ndtre tems par lean Leon, African, INTRODUCTION.

was published by Jean Temporal, who seems himself to have been the translator, and also the author of two laudatory poems to Ramusio, which form part of the various prefaces and dedications attached to the volumes. It has a curious double-page woodcut map of Africa—a copy of the one in the 1554 edition of Ramusio—and a series of large, fair woodcuts, purporting to be portraits of African people, though it is clear the artist had nothing better than his imagination to go upon.

This excellent version of Jean Temporal, which was dedicated to the Dauphin, afterwards Francis II, the first husband of Mary Stuart, was no sooner out than it was pirated by Christopher Plantin, who six years before had established in a small way of business that famous printing house which for two centuries and a half was the pride of Antwerp.'

This volume, admirably printed and bound in vellum, but without maps or illustrations, is confined to Leo's work, which from the first was regarded as the most important in Ramusio's collections; for premierement en langue Arabesque, puis en Toscane, &d present mise en Francois. INTRODUCTION.
Latin version obtained a currency which its merits never deserved, while the infinitely superior version of Temporal fell into disuse. A second edition appeared in 1558, and it was reprinted at ZUrich in 1559,1 and at Leyden in 1632'; and up to this hour it is cited' by geographers, and such historians as usually go to original sources for information, with a confidence which has caused and perpetuated many errors; most of them being apparently unacquainted with the Italian or any other version.
It is, indeed, scarcely possible to characterise in terms, too severe the way in which Florianus executed this version, or the mischief which he has done to the cause of truth. The Latinity is but as only one side of each leaf is numbered, the pages actually amount to 604.
1 As Florianus died in 1585 (Foppert, Bibliothec. Belg., p. 639), this edition was published in his lifetime. It differs from the original in having the pages (1-517) consecutively numbered, and in the chapters and paragraphs of each book also being numbered. But the type, in italics, is small, and not very clear. It is not often met with.
loannis Leonis Africani, Africe descri~tio, ix lib. absoluta
(Lug. Batav., Apud Elzevir, Ao. 1632, with engraving of an emblematic character). i vol. (in two parts, with continuous pagination), 12mo, pp. 800, with 16 pp. index at the end. This is the Latin edition most frequently quoted. It was re-
issued in 1639 by the same publisher in two volumes, evidently from the same

A 16mo work, issued at Leyden in 1634—"Tvrecici Imperii Statvs"—is

sometimes classed as another edition. It is in reality composed of extracts from

various writers on Turkish affairs, with an account of Tunisia and Algeria from

Gramaye and Leo, though without acknowledgment (Bibl. of Morocco, No. 184).

INTRODUCTION.

tolerable, and in some instances elegant, though far from what we have a right to

expect from one occupying an academical position in a day when this tongue was

almost the vernacular of learned men. But the accurate reproduction of the

author's meaning is in numerous places scarcely aimed at. Whole passages, some

indeed of cardinal importance, are omitted; and blunders quite inexcusable are

made with such frequency and under circumstances so inexplicable that it is

impossible to believe that he was familiar with Italian, or that he bestowed the

most ordinary care upon his task. I have already incidentally noted a few of these

errors; but as the Latin of Florianus has been for more than three centuries the

standard version—the Italian, French and English being comparatively seldom

quoted—under the mistaken belief that it was trustworthy, it may be advisable to

prelude my comments on Leo's text by instancing some of the more flagrant

lapses of this Flemish translator, whose ignorance and negligence seem to lay

equal claim on our amazement.'

Thus, to instance some of his mistranslations, coccicic (melons) are Latinised as

cocci, which Pory Englishes as "Cocos". "Mele" (honey) is represented by pira, a

bonfire; and "melaranci"

I The Antwerp (1556) edition is quoted throughout, for the Leyden (1632) reprint

is a discreditable dumpy duodecimo, in which the Elzevirs have slavishly copied

all the blunders of Florianus, without however giving his dedication, or indeed

making the slightest reference to him.

INTRODUCTION.

(oranges) by mala citrea; "Tedeschi" (Germans), is translated Tuscos; "brigantini"

(ships) is turned into mililes, soldiers; "avolo" (grandfather) into avunculum

(uncle); "came di agnelli" (lamb), instead of being translated carne agninam, is

transformed into vitalenare; "Gozzi" (swellings) becomes gargullones nodani;

while "il verno" (winter), of which the natural translation would have been kyems,

becomes in the Latin verna temlora. These and other faults, of a similar though

less heinous character, are due to the translator employing a Latin word which is

not the equivalent of the Italian one. But he frequently goes further, by actually

adding or omitting whole clauses or expressions—a process by which the meaning

of Leo is materially altered. Thus (p. 198), in describing Oran he characterises it

as "maximum hoc atque frequentissimum oppidum "this huge and much-
frequented city—which is a turgid exaggeration of Leo's "una citta' grande "—a large
town; while "ante aliquot saecula ab Afris ad Mare Mediterraneum exstructum" (a
statement of doubtful accuracy) is an exceedingly free expansion of "edificata da
'gli antiche Affricani sul mare Mediterraneo". The words, "a d'intorno alte e belle
mura -surrounded by good and lofty walls-get expanded into the sonorous " muris
Leo describes a large number of the citizens as being artisans and weavers—"artigiani e tessitore di tele"; but the "artigiani" is omitted by Florianus. Again, speak-

INTRODUCTION. 

ving of the number of Catalans who frequented Oran for the purposes of trade, he mistranslates the Italian "loggia" into "vicus"—a street. A line or two lower down, "l'entrata del porto"—the Custom House dues—appear as "tributum Regium"; while "fuste' e brigantini armati", which Pory (who, unfortunately, for reasons not difficult to explain, follows Florianus in most of his blunders) very properly translates "foists and brigandines of war", appears in the Latin version (as already noted) "propriis sumptibus milites"; though one might think the seafaring men of Antwerp could have explained to the Rector of its High School what a "foist" and a "brigantine" were. After telling how Ferdinand, King of Spain, captured Oran, Leo—who, when he does not write from personal knowledge, is usually careful to say so, and in this case derives his information from "most credible and substantial persons, which were themselves eyewitnesses of the scene"—apologises for this pusillanimity on the part of his countrymen by the fact that the town was torn by civil broils ("per causa di molti disordini"); but Florianus omits these important words. A still more serious blunder is his mistranslation of "d'indi a molte mesi con l'aiuto d' alcuni vescovi e del cardinale de Spagna una maggiore ne rifece: e con questa in una giornata fu presa la citt") into "verum post aliquot deinde

1 Fusta, a galley.

2 "After many months, with the help of some Bishops and a
It is doubtless to this inference of Florianus that we trace the widely accepted notion that Leo's family fled to Africa after the fall of Granada—a conclusion which we have shown is by no means justified by any of the facts within our knowledge.

INTRODUCTION.

Again, we find—not to enumerate less material errors—"giudice" (judge) mistranslated "judxum" (Jew), evidently under the belief that the word is "giuded", and "una scorta" (a convoy or escort), by scorlum (a hide), etc. Another mistranslation has often puzzled those familiar with Morocco, and misled a still greater number of readers who, like Florianus, were unacquainted with that country. It is in describing Leo, when he met with his romantic adventure among the Atlas snows, as travelling with "currus" (p. 26). This word, which occurs thrice in rapid succession, is translated "carts" by Pory. But as there are no roads except bridle-paths in Morocco, wheeled carriages

1 Fey, Histoire d'Oran avant, Pendant, et apr' la domination Espagnole (Oran, 1858), p. 69, whose authority is Alvarez Gomez. There is something not unpleasant, according to the Rochefoucauldian maxim, in finding that Lorsbach, a German grammarian who is cruelly hypercritical upon Florianus, is in this passage quite as blundering as the translator whom he corrects; for Oran was not captured in A.H. 6191—which may be a misprint for 96—nor is the latter year equivalent to MDX. Temporal is even worse: for he translates "novecento sedici" as "neuf cens".

2 The Sultan has an ancient state carriage in which, at a very slow pace, he is dragged to the palace mosque on Fridays, the horses being led, not driven. But he always rides back. In i890, the late Mulai Hasan acquired a hansom cab; but it is never outside the palace. Some carts were taken to Marakesh (Morocco City) a few years ago; but soon got broken. In Mula! Ismail's time there were a few rude waggons at Mequinez dragged by Christian slaves, but they were not used for carrying merchandise.

INTRODUCTION.

are unknown outside of the coast towns, all goods being carried on the backs of camels, horses, mules and donkeys, and consequently this statement that "carts" were employed for freight nearly four centuries ago, especially in the rugged Atlas, seems inexplicable; until we find that in the original Italian the word is "carovana"—or caravan, a packteam of animals, which might have been correctly Latinised as "comitatus", though unfortunately the puzzle has seldom been solved by ascertaining what the Moor himself said.

These instances of faulty translation, of unwarrantable omission or amplification, might be indefinitely multiplied did space permit. In short, Florianus, with all his merits—and the vast service he did to geography by rendering Leo accessible to many people too learned to understand either Italian or French must not be forgotten—was afflicted with the worst fault in an editor, that lues emendaloris
which afflicted so many of the transcribers of the period. He could not let well alone. He tried to improve the text by giving his personal gloss to the writer's meaning, a proceeding which would have been perfectly justifiable and even commendable had he not too frequently incorporated his reading into the text without distinguishing what was his and what was Leo's. Thus—as final citation—the passage which seems to have troubled the conscientious editor of the fictitious narrative of Adams (Mr. S. Cock, of the Company of Merchants trading to

INTRODUCTION.

Africa).1 Here the words of Leo, in which he describes the houses in Timbuktu as huts, built with stakes covered with chalk (or clay) and thatched with straw (an almost exact description according to the latest account), appear to Florianus to fall below what he considers the then half-fabulous city of Central Africa ought to be; for he adds "sunt mutatoe". Again, Leo's rather confused description of Timbuktu as being "vicina a un ramo del Niger circa a dodici miglia", is improved by Florianus and Pory into "in duodecimo millaria a quodam fuvio situm fuit quod e Nigro flumine effluebat".

PORy's EDITION.

In these preliminary criticisms upon the translation of Florianus, I have somewhat anticipated what might have fittingly appeared as emendatory notes to the chapters in question. But as this version has been accepted for more than three hundred years as a sort of geographical classic, it is right that its latter-day students should be warned against the many pitfalls with which its pages are studded. Unfortunately, also, the translation which is here reprinted has in many places been

I The Narrative of Robert Adams, a Sailor who was wrecked on the Western Coast of Africa in the Year z&ro, was detained Three Years in Slavery by the Arabs of the Great Desert, and resided several months in the City of Tombuctoo (i816), p. 183.

2 "Within twelve miles of a certaine branch of Niger."—Pory.

f

INTRODUCTION.

affected by the errors or the carelessness of Florianus. For, though Master John Pory does not say in so many words that his version is from the Italian, without the interposition of the latter, he is evidently desirous, from his references to Ramusio, and his sedulous avoidance of Florianus' name, that this impression should be conveyed. In reality, as shown by the fact of his accepting the worst of the Latin blunders, though his good sense enables him to steer clear of some of the Antwerp Rector's absurdities, his version seems in the main to have followed that of Florianus, though at times the translator may have consulted the Italian, a language with which he was probably less familiar than with Latin.
Pory was a friend of Hakluyt,' who, according to the dedication, and a note prefixed to the volume, intimates that not only did he regard the way in which the translation has been executed with approval, but that he himself "was

1 Of Pory little is known. In the Register of Gonville and Caius College, Cambridge, he is entered as "John Porye", who became an undergraduate in 1587. There is no further information regarding him, but in Dr. Venn's printed list the following quotation is translated from an "early note" in Latin. "This man translated and collected a geographical history of Africa, written in Arabic and Italian by John Leo, a Moor born in Granada. He presented a copy of it to our library, with a printed paper in the beginning testifying to his regard to the College." The date of this "early note" is not stated, He does not seem to have graduated. In the Court and Times of Charles I (vol. ii, p. 90), there is printed a letter from Pory to Sir Thomas Puckering.

lxxvi

INTRODUCTION. lxxvii

the first and only man that persuaded him to take it in hand." The version has, therefore, peculiar claims upon the Hakluyt Society. Apart, however, from any merits of its own-an any vital defects will be pointed out-the book is an excellent specimen of Elizabethan English, lucid, quaint, and plain-spoken to the verge of what, in these more conventional times, might be regarded as a little unrefined.

Again, as Pory was almost a contemporary of Leo, his version is preferable to one written in language less in accordance with the Italian of the original. He was, moreover, a scholar, and in his way a geographer, for his translation' is sandwiched between an account of the part of Africa not described by Leo, compiled from various authors, and of value as a fair view of the knowledge of that continent possessed by the Englishman of the closing years of Queen Elizabeth's reign.

1 A Geographical I Jistorie of Africa .... . .. Written in Arabiecke and Italian Iby John Leo a More, I Londini, I I6oo.

Title : Dedication, i page unnumbered; To the Reader, 5 pages unnumbered; A generall description of all Africa, together with a comparison of the ancient and new names of all the principall countries and prouinces therein, 1-57; An approbation of the historie ensuing, by me Richard Haklvyt [with extracts in praise of Leo by Ramusio, Ortelius, Bodin, and Posseuinus], 57-60; Leo's text, 1-358; A briefe relation concerning the dominions, revenues, forces, and manner of government of sundry the greatest princes either inhabiting within the bounds of Africa, or at least possessing some parts thereof, translated for the most part out of Italian, 359-420. The only edition is in 4to, with a map of Africa, f2

lxxviii INTRODUCTION.

The book is dedicated to Sir Robert Cecil, Lord Burleigh's son, Secretary of State, and afterwards Earl of Salisbury; and as it refers to the recent visit of " the
Marocon ambassadour", and the interest on that account aroused regarding Africa, we may take it that Master Pory, with fine business instinct, produced his famous treatise at an opportune moment. Considering the circumstances mentioned, his translation can scarcely be regarded as equal to Temporal's, so far as literal accuracy is concerned. It is, nevertheless, better than that of Florianus and when the occasional inaccuracies which he too readily adopted from this latter are corrected, it may be regarded as quite worthy of the esteem in which it was held by his contemporaries, and still is up to this day by those geographers who continue to quote it. Like Florianus, he is at times apt to let his feelings get the better of him, and to intercalate an offensive remark touching that "great deceiver Mohamet ", or to strengthen an abusive epithet. Having been issued in the same year that the last volume of Hakluyt's Principal Navigations, Voyages, T-affiques and Discoveries was completed, it does not appear in that collection. But in the second volume of Hakluylus Posthumus or Purchas his Pilgrimes-a work made up mainly of materials left unprinted by Hakluyt-the greater part of Pory's volume is included.1 It is also abridged in Harris's collection.2 The next edition of Leo which appeared seems to have been the Dutch one issued at Rotterdam in 1665,3 though, as in so many of its predecessors, the translator-who seems to have I Observations of Africa, and a description of the Kingdomes of Bugia and Tienes, the Land of the Negroes, and of the Confines of Egypt: with an account of the People, Tribes, Languages, Seasons, Vertues, Vices, and other more general considerations of Africa, vol. ii, pp. 749. (1617-25.) 2 "c A particular account of the Kingdom of Morocco, taken out of Joohn Leo. Additions collected from Marmol, John Leo's Description of the King of Fez", etc. Harris, Navigantium atque Itinerarium Bibliotheca, etc., vol. i, pp. 316-338 (1705). 3 Pertinente beschryvinge van I Africa met alle de Landen, KoningriVken, Steden, Volken, I Gewoonten Gedierten Vogelen, Boomen, I Aaard-vruchten die daar zijn. I Met Kopere Plater verciert. I Hier neffens is by-gevoet een pertinente beschryvinge van de Kuste van Guinea, 0 soo als die hedens daags bevaren word, en de Handelinge die daar op de I Gout-Kust word gedreven, beginnende he xvii. Cap. I Tot Amsterdam. I By Arnout Leers. Boek-verkooper I MDCLXV, 4to. The book is dedicated in a very laudatory preface (signed by the publisher) to the Admiralty Committee of Rotterdam. The map is a copy of that published by Jodocius Hondius, and the
copper-plates are for the most part reproductions of those in the French version of Leo. The book is divided into twenty-two chapters, the first nine (pp. 1-225) of which correspond to the nine books of Leo. The others are occupied with compiled matter, in many cases containing curious facts of much value relating to the Moorish sovereigns, the trade of the Moors with Guinea and Gago, the different settlements along the African coast, and particularly with the Dutch commerce in the West African settlements.

INTRODUCTION.
been the publisher, Arnout Leers-made his version from the Latin of Florianus, instead of from the original Italian. With the exception of Purchas's annexation, Pory's translation has not hitherto been reprinted, and perfect copies now fetch a price sufficiently high to show the esteem in which it is held by collectors. But, in 1738, Francis Moore, an unusually learned Factor of the Royal African Company, retranslated, as an appendix to his work on the Gambia, nearly the whole of Leo's account of the Negro kingdoms, which he, in common with most of the geographers of that date, believed to be identical with the Niger. This version professes to be from the original Italian; though as it is merely a summary, 1 "Travels into the Inland Parts of Africa :containing a Description of the several nations for the space of six hundred miles at the River Gambia,- their trade, habits, customs, Languages, Manners, religion and government. the Power, Disposition and Character of some Negro Princes: with a particular Account of job Ben Solomon, a Pholez, who was in England in the year 1733, and known by the name of the African. Yo which is added Capt. Stubbs' Voyage zp the Gambia in the year 1723, to make Discoveries," with an accurate Mapo of that River taken on the spot: And many other Copper Piates. Also Extracts from the Nubian's Geography [Edrisi’s], Leo the African, and other Authors ancient and modern, concerning the Niger, Nile and Gambia, and observations thereon; by Francis Moore, Factor several years to the Royal African Company of England. London: Printed by Edward Cave, at St. John's Gate, for the Author, and sold by J. Stagg, in Westminster Hall; and at St. John's Gate aforesaid. DCCXXXVIII." 2 In my work on Africa, vol. i, pp. 120-2 76, the history of the revolution in opinion on this subject is traced.

INTRODUCTION.
it is difficult to say whether he, like others, did not consult the Latin too frequently. It differs from Pory, though it is not free from a few of the blunders of Florianus. Moore, who like many of the early West African traders, seems to have been a man of unusual intelligence, adds a few notes to his pages, some of which I have found of use in trying to interpret Leo's meaning. Up to the year 1801, no German translation seems to have appeared; for in a critical summary of the book by the Hofrath Paul Jacob Bruns, I only the Latin of Florianus (Leyden edition, 1632) and the Italian of Ramusio are quoted. This
paper is a useful analysis of Leo; but though the author was a student of African geography, the information at his disposal scarcely enabled him to do much in the way of elucidation, while the attempt he makes to fix the principal dates of the Moor's career is not in accordance with the facts which we have extracted from the book itself.

But in the same year that Bruns published this brief analysis, Leo's work was made the theme of a discourse by Lorsbach, Prorector of the Nassau University, in which the inaccuracies of the Antwerp

2 He wrote a Vue Systematische Erdbeschreibung von Africa, Nuremberg: 6 vols. (1791-99), as part of a general geography by Schneider and others.

INTRODUCTION.

Latinist were anathematised in a tract of twenty pages, half Latin half German, composed in the true style of that grammarian who consigned his rival to perdition for his treatise on the irregular verbs. This exposure of his predecessor's inaccuracies was, however, only an advertisement showing the urgency of a fresh translation, which was duly produced five years subsequently. So far as literal accuracy is concerned, this German version is faultless, but the author being entirely unfamiliar with the region described by Leo, adds nothing of his own to the elucidation of the text; and as African exploration was then in its infancy, he could benefit but scantily by the labours of others. Most of his emendata have, however, after verification, been embodied in the present volume. This was the last version of Leo produced, though in 1830, Ramusio's Voyages' were reprinted at Herborn, 8vo, i8o5. This version is, according to my experience, the rarest of all the editions of Leo. The British Museum does not possess a copy, and I have in vain searched other libraries for it, nor have I yet been able to obtain a copy in Germany (Feb. 4th, 1895).

INTRODUCTION. lxxiii
Venice, and Temporal's translation at Paris; in both cases with careful revisions of the text, though without the maps or woodcuts in the original version.

I have only to add that the late Dr. Heinrich Barth promised, more than thirty years ago, to undertake the task which has fallen to a less competent successor. But it is understood that he had made little-if any-progress with a labour for which he was so eminently qualified, when his untimely death in 1865 postponed for more than a quarter of a century the reissue of a traveller, whose only rival in the knowledge of Northern and Central Africa had, up to that date, been Barth himself. Fortunately, however, the accomplished young German, in his two great works, has put at our disposal the most important portion of his information regarding the countries described in Leo; and, as the following pages will often bear witness, he, though dead, speaks again in the notes extracted from those volumes.

WORKS COMPILED FROM LEO'S AFRICA.

Though the above editions comprise all that can properly be described as acknowledged versions of Leo, there are many other works which are, to all intents and purposes, little more than compilations from the information which he supplies, or paraphrases of his text. Thus Marmol-Caravajal—who, like Leo, a native (1520) of Granada, and who was taken prisoner during the expedition of Charles V against Algiers, and for the next seven years travelled over a great part of North Africa—in his famous description of Africa, merely translates largely from his predecessor's work, though he has the meanness to mention Leo's name only once.

INTRODUCTION.
On the other hand, Langres de Tassy copies freely from Marmol, while Joseph Morgan is quite as much in his debt, though it is incorrect to say that his works are "mere translations" from Langres de Tassy.
Jean-Baptiste Gramaye was an equally barefaced plagiarist of Leo and Marmol, "Maximum partem", runs the verdict of Hartmann, "que Geographiam spectant, ad verburn ex Leone desumsit". Manuel de Faria y Sousa is also indebted to him for his information about various transactions, though without acknowledgment.
Dapper puts Leo freely under contribution, while Ogilby's huge folio is practically a translation of the 1 Histoire di Royaume d'Alger (1725).
2 History of Algiers, to which is prefixed an epitome of the General History of Barbary from the earliest times (1728) : A Conipleat History of the Piratical Slates of Barbary, etc., by a gentleman who resided therefor many years in a public character (i 75 0).
3 Africae Illustratce, Lib. x in quibus Barbaria gentesque ejus ut oim ut nunc describantur Tornaci-Nerviorum (Doornik), 1622. Gramaye, who like Florianus was a citizen of Antwerp, had been for some time a slave in Algiers (1619-1622), which to him was "Hell's epitome", "Miseries Ocean", "Whip of the Christian World", "Torture's Centre", etc. (1681).
4 Africa Portuguesa, etc. (1681).
5 Nauwkeurige beschrijving der Afrikaansche Gewesten van Egpten, Barbaryen, Libyen, Biledulgered, Negroslant, Guinea, Etheoien, en Abyssinien. Amsterdam, 1668, 2nd ed. 1676, fol.
6 Africa : being an accurate description of the regions of Egypt, Barbary, Lybia, and Billedulgerid, etc., 1670. It is valuable historically for its plans of Tangier, while occupied by England. Petit de la Croix's Relation Universelle de l'Afrique, etc. (1688), is another plagiarism of Dapper.
ixxv

INTRODUCTION.
Dutch geographer. D'Avity, also, would never have written his work' had Leo not written before him. Livio Sanuto is more honest, though scarcely less indebted to the Moor, and all the map-makers from Hondius downwards, and even earlier-for in Ramusio and Pory there are maps of Africa based upon his descriptions-draw their information direct from his pages: Indeed, up to a very recent date, nine-tenth of the names on the maps of those parts of Africa traversed by him were placed there on his authority alone: for he was not only the great, but the sole authority in these regions.
It is perhaps unnecessary to add, that every author who had occasion to write on the Barbary States and the "Land of the Negroes", quotes him profusely. H6fer, and Dureau de la Malle in his industrious digest of the geography of the Province of Constantine, refer to him on almost every page; and as late as 1834, that most untrustworthy though voluminous author, Graberg di Hems, again and again copies without acknowledgment Leo's descriptions of Moroccan towns; in many instances without even taking the trouble to ascertain whether they existed, or whether the data which were accurate in 1520 applied with the same strictness three centuries later. In like manner, Lord, in his work on "Algeria" (1830), compiles the geography in part from Leo.

All of the older writers on Africa exhaust themselves in eulogies upon the Moorish geographer. Pory has appended some of them to his own description of the parts of Africa undescribed by Leo. Chief among these admirers of our author was Richard Hakluyt.

Authors of a later date are scarcely less unanimous in vouching for the merits of Leo. Walckenaer, who for his time was one of the most accurate students of African geography, affirms that seventy years ago the geography of "Jean Leon, surnommé l'Africain", threw an entirely new light upon the interior of Africa, and that "c'est encore aujourd'hui pour ces regions la principale autorite, la source d'instruction la plus abondante et la plus pure. ... Les notions les moins douteuses que l'on a pu acquérir dans les derniers temps, coïncident avec celles qu'il nous a données."

deserves the uncomplimentary criticism bestowed on it by Tissot. (Recherches sur la geographie cornfare de la Aauretanie lingitane, 1877, pp. 148, 461.) See present edition, p. 103.

2 Recherches Ge'ographiques sur 'intirier de 'Afrique sejtentroniale, &c. (1821), pp. 36, 84, 192.

INTRODUCTION.

Hartmann, a still more learned commentator on mediaeval geography, is even more enthusiastic in his praise; he remarks: "De libelli eius praestantia inter
omnes satis constat. Libellus (olim dicta enim repetere me non poenitet) est aureus: quo si caruissem lumine quasi quam saepissime caruissem."

Scarcely a traveller has written on Northern or Central Africa without citing Leo's opinions; not to cite the numerous minor writers who have been indebted to, or have spoken in appreciative terms of, the work, we may mention Renou, Pellissier, Carette, Shaw, Temple, Mannert, Guerin, Playfair, D'Avezac, Berbrugger, Castiglioni, the Beecheys; and last, but by no means least, Barth. With the exception of some parts of the Atlas and the Riff country, all, or nearly all, of the regions described by Leo have been visited by European travellers. Hence, while the old writers accepted him as their sole available authority for the geography of vast tracts, without the possibility of checking his statements, the modern student is able to regard him merely as an historian—a personal witness of towns, and events, and manners which have passed away, or of circumstances which for four centuries have remained unaltered. But whenever we are in a position to test his statements, Leo's credit as an observer has gained rather than diminished. Hence, to-day, the traveller in Morocco, or in Algeria, or in Tunis, or in Tripoli, or in

1 Edrisii Africa, ed. altera, 1796, p. xx.

INTRODUCTION. lxxix

Egypt and Central Africa, finds frequent occasion to refer to John Leo, though seldom to scoff at his accuracy when he discourses of what he actually saw. Indeed, among the many authors who have commented on, or pillaged from, or mentioned his book, the only ones whom I can remember as unfavourable to him are Morgan and Chenier. Morgan, himself one of the most audacious of plagiarists, prefers Marmol in spite of his being "somewhat too verbose, virulently partial, and not always correct.' Chenier's meritorious treatise 2—which is said to have given great offence to Sidi Mohammed X though of little geographical value, sneers at Leo's description of Fez as exaggerated. But when the Scottish traveller, William Lithgow, visited it about the year 1617, he was amazed at the grandeur of the mosques (into which, more fortunate than his successors, he was permitted to enter), and palaces, and caravanserais, which made it second only to Cairo, equal to Constantinople, and far superior to

INTRODUCTION.
Aleppo, these four cities being the greatest he had ever seen at home or abroad; though Lithgow seems to exaggerate when he affirms that the plain contained at that date "125,000 fine houses, and in them a million of souls." Even at that date it was a literary centre, the home of a "great number of poets", and the scene every year, on the Prophet's birthday, of literary competitions; albeit what he says on the subject bears a suspicious resemblance to Leo's description, though our traveller is never once mentioned by him.

LEO'S STATUS AS A TRAVELLER.

This general consensus of opinion regarding the merits of Leo—by the old writers who were compelled to take him on trust, and by the younger who were able to check many of his statements—may be accepted as a positive proof that the great reputation he has enjoyed for three-and-a-half centuries is not undeserved. He occupies, in the first place, a distinct position in the roll of African geographers. His period comes between those of El-Bekri and Edrisi on one side, and the histories of Marmol, Haedo, Birago, Diego de Torres, Gramaye, and the native historians on the other side. He may indeed be described as the last of the Arab scholars who derived their inspiration from the brilliant age of Mussulman civilisation in Spain; for the decadence of his people in polite letters began at the date of his birth; while even in his day, as he laments, the

INTRODUCTION.

love of polite letters had ceased to be a passion with the African Moors. The Arab geographers before El-Bekri scarcely deserved the name. Their works were undigested compilations, out of which it is often difficult to make any sense. Into this category come Ibn el-Wardi and Kazwini. Even the works of Abu-l-Feda and Ibn Haukal, both of which contain so many useful notes on the early geography of Africa, cannot be excluded from this general stricture. El-Bekri, with whose works Leo was acquainted for he begins Book vii with a reference to the fact that neither he nor Mas'cidi supplies any information regarding the Negro country—contrary to what might be premised from his nationality, was not personally familiar with Africa. He was born at Cordova, towards the close of the eleventh or about the beginning of the twelfth century, and in his capacity of Khatib had frequent opportunities of conversing with natives of the Northern provinces of Africa. The principal of these informants was a Berber, who came to Cordova about A.H. 352, as envoy from the Omayyid Khalif, Mostanser. But nowhere does Bekri say in so many words "this I saw with my own eyes", or "heard with my own ears", as Leo is in the habit of doing. All that he is able to affirm is on the authority of some preceding writer, or the declaration of some native of the particular region he is describing, or the news brought back by travellers who had explored the region. His book is therefore a compilation of 9'
second-hand information; though, no doubt, owing to Spain and Africa being, at the time he wrote, under Arab rule, his opportunities for picking the brains of competent informants were excellent.

Edrisi was probably born about A.H. 493 (A.D. 1099-1100); and Casiri1 seems to have satisfied himself, though on what grounds he does not inform us, that Ceuta, in Morocco, was his birthplace. Cordova appears to have been the place of his education, and from the intimacy with the geography of Spain which he displays, it is probable that he travelled through most of that country. However, he soon left for Sicily, whither many of his family had fled after the victory of 'Obeid Allah ben Ismail El-Mahdi, towards the commencement of the tenth century. In that island he won the favour of King Roger II, under whose patronage he wrote his "Going out of a Curious Man to explore the Regions of the Globe, its Provinces, Islands, Cities, and their Dimensions and Situations"; the alternative name of "Nubian Geography", which was given to it by Sionita and Hezronita, two of its editors, being altogether arbitrary, as the book is actually a description of the entire world known to Edrisi and his informants. He does not seem to have travelled much himself, for though he returned to Africa, and died at Ceuta, the work which formed so notable a landmark in the history of geography was a compilation from

INTRODUCTION. lxxxii

notes supplied him by agents sent out expressly for the purpose.

In this respect both he and El-Bekri differed widely from Leo, who wrote for the most part about what he had actually seen. But though Edrisi lacks the luminous style of Leo, the critical acumen which he bestowed on the materials put at his disposal, imperfect and inaccurate though many of them were, compares favourably with the credulity displayed by subsequent compilers such as the unknown writer whose plagiarisms have been so long accepted under the name of Sir John Maundevile's Voyage and Travaile, which seem to have been collected in the first two decades of the fourteenth century. It must also be remembered that when Edrisi wrote, the Berber dynasty of the Almohades had just dethroned that of the Almoravides; and that though the Arabs had begun to play a very secondary part in the West, they were still powerful in the East a fact which the historian, in spite of his anxiety to be agreeable to his royal patron, tries to impress upon his readers. Leo also was the protege of a powerful Christian sovereign—a circumstance which doubtless suggested to him the omission of much which might otherwise have been inserted in his volume. Thus he observes much the same kind of reticence regarding the conduct of the Spaniards and Portuguese in Morocco, which Edrisi does concerning the enterprise of Roger I I. Still, there is no reason to doubt the accuracy of what Leo tells us. This, indeed, we can check by g 2

INTRODUCTION.
our own observations. The distinguishing feature of this writer is the minute accuracy regarding comparatively trifling matters. Kafsa (Caphsa), which he describes quite accurately, is inhabited, he informs us, by a people of a rude and illiberall disposition and vnkinde vnto strangers: wherefore they are held in great contempt by all other Africans (Book vi). This trait is still notorious, and was noticed by Sir Grenville Temple when he visited the place upwards of sixty years ago. Leo appears (as we have already noted) to have kept memoranda, otherwise it is impossible for his memory to have preserved so many details: though when he finished his volume he was very little over thirty years- of age. As a tribute to his conscientiousness, when describing "the mountaine called Horta"-the highest peak of the Atlas-he mentions that he saw many notable things there of which he could "make no discourse at all, partly because they are out of my remembrance". When Leo tells exactly what passed before his own eyes he is seldom far wrong; it is only when he trusts to others that he falls into absurdities. Throughout the book it is, however, his own knowledge that is mainly relied upon. It is only in matters of history that he quotes from other writers, and from the frequency with which he refers to them we obtain a hint regarding the extent of his reading. Thus, he knew his Ptolemy-as did Edrisi also-and his Orosius. He often quotes Ibn el-Rakik, from whom he has taken his account of the early Arab invasions and

INTRODUCTION.

other particulars, Edrisi, El-Bekri and Mas'Udi; and though he does not mention him by name, his description of the Riff is so like that of Strabo as to suggest something more than a mere coincidence; and he is condescending towards Pliny as a man of merit who erred owing to his ignorance of Africa. Nor, as we have seen, is his book free from errors for which he, and not his translation, is responsible. Thus, in addition to what we have already noted regarding his errors in dates, and the like, he is altogether confused in discussing the site of Volubilis, and he places Agadir (Gartguessen) on the River Sus instead of six miles north of it, while he confounds that river with the Nessa. Nor is Leo innocent of blunders which cannot be attributable to imperfect knowledge of certain countries. Thus, he declares that the Chelif (Selef) rises in the Gunseris (Wanseres) Mountains and falls into the Mediterranean between Mezagran and Mostaganem; this river in reality having its source in the Jebel el-Amir in the meridian of Algiers, and not in the Wanseres, which are much farther to the west, while its mouth is to the east, not to the west, of Mostaganem. Berbrugger' is, however, entirely wrong in affirming that Leo makes the Muluia fall into the ocean. He expressly intimates that it enters " nel mare Mediterraneo non molto discosto della cittat di Casasa". It is Temporal who

1 Revue Africainie, 1858, p. 363.

INTRODUCTION.

makes this mistake, Florianus and Pory translating Leo's text quite accurately.
His description of Tuggurt (Techort) is, however, the most extraordinary of his few inaccuracies. "The ancient town of Techort" - I am quoting Pory, who renders the meaning quite satisfactorily "was built by the Numidians upon a certain hill by the foot whereof runneth a river, upon which river standeth a draw bridge. The wall of this town was made of free stone and lime, but that part which is next unto the mountaine hath instead of a wall an impregnable rock opposite against it: this town is distant five hundred miles southward from the Mediterranean sea, and about 300 miles from Tegorarim (Tegorarin)." Again, in giving a list of the places he is about to describe in the west, he mentions first Tegorarin, then Mzab, then Tuggurt, and last of all Wargla, the enumeration proceeding from west to east. Yet Tuggurt is put to the west of Wargla. However, it is in the description of Tuggurt that he is most wide of the mark, for that town has always been built in a plain, not on a mountain. It has no river below, for that name could not reasonably be bestowed on the ditch or canal which receives the superfluous

1 "Una montagna come un tufo"-a mountain in the form of a promontory.
2 "Pietra viva e di creta."
3 "Non della parte del monte, perciocche ivi difesa delle rupe."

I Leo's miles are Roman.

INTRODUCTION.
irrigation water furnished by artesian wells. But, as M. Berbrugger very justly remarks, if we admit this canal to be the little river (fizizzello) of Leo, and that he gives the name of a mountain to the earthwork where the town is fortified, it is impossible to understand how he places it between Mzab and Wargla, or how he accounts for those high rocks, of which there exists not a trace under the city walls.

Nevertheless, the fact remains that Leo stands out prominently among the writers, not only of his own age, but of succeeding ages, for his freedom from superstition and credulity, his absence of prejudice, and his unusual accuracy. Marmol, who wrote nearly a century later, was an historian of a different type. His judgment had been warped by the wrongs he had suffered during his captivity in Barbary, differing so widely from the kindness which Leo met with in the course of his nominal servitude to the Pope. He displays without moderation on every page his violent religious prejudice, and his hatred of those who professed a different faith from his own. He even goes so far as to declare that his object in writing was to stimulate the Christian natives "to arm against the infidels". His position was a remarkable contrast to that of Leo's in Africa. The Spaniard left the land of his birth to endure for more than seven years the humiliation of slavery, in the very regions through which his predecessor and townsman
travelled in freedom and comfort. Leo took what notes he pleased. Indeed, as a
man of letters, he was encouraged to write on any and every topic, and in his
capacity of notary had ample opportunities for inscribing remarks on the
peculiarities of the people with whom he came into contact. Marmol, by the
surveillance of his guardians, was doubtless debarred any such privilege, so that
his descriptions are taken almost verbatim from Leo, though as an historian he has
merits of his own. Captain Carette' carries the contrast between the two great
rivals in the geographical description of Africa still further. Thus, while Leo
closed his travels as a captive, Marmol closed his as a free man in his own
country, though it is equally to be regretted "que le Chretien, transplanté sous la
tente des Arabes, n'ait pu écrire tout ce qu'il voyait, et que le Maure, transplanté
'a la cour pontificale, n'ait pu dire tout ce qu'il savait". And it is curious to note
that both writers ended life as they began it: the Spanish officer by a translation of
the Morals of Sai*t' Brzrigile" the godson of Leo X by a treatise on the
Mohammedan religion, and most likely by a recantation of the creed into which
he had been baptised.

INTRODUCTION.
THE CREDIBILITY OF LEO'S NARRATIVE.
Time has, therefore, dealt kindly with Leo: for if we find that he is worthy of
general confidence on matters which can be checked, it is justifiable to assume
that he is equally to be trusted when his statements cannot be verified. There are,
for instance, parts of the Atlas which have not been visited since his day by any
traveller capable of describing what he has seen; so that for the present, at least, it
is impossible to confirm his description of certain villages, tribes, and
geographical features, or even to identify them. Again, the condition of the
African cities in the sixteenth century must, for the most part, be accepted on his
word, and several towns described by him are no longer to be found-the very
names have vanished.

This is, however, not a matter for any surprise. Three or four centuries work
wonderful changes, even when a city of stone or brick and mortar is left to itself.
The native towns of Barbary are generally built either of swish, of " tabía" (lime
and clay), or of sun-dried bricks, which after a few rainy winters, if the houses are
not repaired, return to their original clay; and when places are deserted, through
war or other causes, it is difficult in a few years to trace the outlines of a once
prosperous village, or even "city", after the IMorocco fashion. An apt illustration
of this is furnished by

INTRODUCTION.
Shaw,' though he rather exaggerates the unsubstantiality of a Barbary town.
"When I was at Tozer in December, A.D. 1727", he tells us, "we had a small
drizzly shower that continued for the space of two hours; and so little provision was made against accidents of this kind, that several of the houses which are built only, as usual, with palm branches, mud, and tiles baked in the sun (corresponding perhaps to, and explanatory of, the untempered mortar, "Ezek., xiii, i i), fell down by imbibing the moisture of the shower. Nay, provided the drops had been larger, or the shower of longer continuance, or overflowing in the Prophet's expression, the whole city would have undoubtedly dissolved and dropt to pieces." Yet, in El-Bekri's day, Tozer was regarded as "a great city surrounded by a wall of stone and brick", many bazaars, suburbs, and a numerous population. Even to-day, though its walls are demolished, and it is little more than a collection of villages, Tozer is' still a place of some consequence.

In Leo's pages we have repeated mention of towns being evacuated and being half in ruins when he saw them. This state of matters has been steadily in progress ever since. War, pestilence, or the whim of a Sultan, has led to once thriving places being deserted, so that it is no wonder that many "cities" visited by the traveller of four centuries

INTRODUCTION.

ago are no longer to be seen. They have crumbled into mud, or a few blocks of tabia, still bearing traces of whitewash, stand amid the prickly acacia bushes or the palmetto scrub: mute evidence that on a spot where now no sound is heard save the squeak of the land-tortoises, or the whirl of the partridges, were, at a time of which tradition has not kept the record, the hives of a busy race of men. Again, whole tribes have been exterminated, and towns razed, to gratify the vengeance of a conqueror. To threaten a city with being so completely destroyed that it might be sifted through a sieve, was a common hyperbole of the Moorish Sultans. Then, too, tribes not only disappear but change their homes. Thus, in Leo's day, the valley of the Zizor Siss-was inhabited by the Zanega, a Berber tribe, the same Mr. Ball suggests, as the Azaneques, whom Ca da Mosto describes in the vicinity of the Wad Nun. They have since migrated across the Sahara, and, still calling themselves Zanega and speaking a Berber dialect, are dangerous neighbours to the black people of the Senegal. The names of places also change in time. One example out of many may suffice. Agadir, which

1 Hooker and Ball, Tour in Morocco (1878), p. 377. This volume contains a useful paper on the geography of South Morocco; but Mr. Ball is in error when he supposes that " there is nothing in the published. annals of the Poituguese wars with the Moors to suggest a belief that the former at any time established their authority in the interior of South Morocco, or even undertook any inland expeditions" (p. 383).

xci

INTRODUCTION.
in the Berber tongue means the wall (Arabic, Si-r), is identical with the place
which Leo calls Gartguessem; yet at the time of the foundation of the Portuguese
fort, and while the place on the hill grew, it was known to the Europeans as Santa
Cruz, and to the natives as the Europeans' house (i.e., Tigitimmi-Rumi of the
Berbers, Ddr-Rdmi of the Arabs).

A village will often be known by the name of a noted chief or saint, and take that
of his successor; or if, owing to any untoward incident, the old name is accounted
"unlucky", it will in time be changed. Moreover, in North Africa, and especially
in Morocco, there are almost universally two names for every place—the Arab and
the Berber—and the one which a traveller hears depends very much on the
nationality to which his informant belongs. On the coast, and for the better-known
cities of the interior, there are usually three, the third being that applied by the
Europeans as their transformation of the native one. This, however, is not likely to
lead us far astray.

Leo had not, so far as we can gather from his remarks, any acquaintance with the
Berber language; so that it is very probable that he occasionally mistook the
pronunciation of place-names not Arabic; and when translating his Arabic
manuscript into Italian adopted a puzzling form of transliteration, which may
account for the peculiar shape some of the names have taken, or for others the
identity of which is less easy to settle. In addition, it must have

INTRODUCTION.

inevitably happened that Leo's manuscript contained the usual percentage of
lapsus penne, while Ramusio's print, in spite of the care he bestowed upon it,
contains various errors.

All of these factors must be taken into account in studying Leo's text and the
accuracy of his statements. We must not therefore allow the fact that many of
Leo's remarks no longer hold good at the present time to have more than its due
weight.

CHANGES SINCE LEO WROTE HIS DESCRIPTION OF AFRICA.

Leo is sometimes considered to have been rather florid in his description of the
riches and populousness of Northern Africa four centuries ago. But there is no
room for doubt that the population of all the Barbary States, and that of Morocco
in an especial degree, must, with the prosperity which population gives, have
markedly diminished within the interval between Leo's day and ours. Even within
the last century there has been a remarkable decrease in both. Any other
conclusion is impossible. Arab and Berber families are usually large, but no
natural increment could make up for the hecatombs slain in civil war, or laid low
by epidemics and famine. The ruined towns and villages, the deserted hamlets, the
legends of populous places where there are now no sounds save the cry of the
jackal, together with the startling falling-off in the population of cities like Fez,
Mekines and Merakesh,

xc..°

INTRODUCTION.
are proofs that even within the last century, or century and a half, the people of Morocco have been waning in numbers, while the decline in the prosperity of the Empire since Leo's day has been remarkable. Allowing that he did not permit his country to lose anything in the eyes of the Christians, for whom his famous work was written—although there is not much in its pages to demand any such postulate—these must have been flourishing times in all parts of the kingdoms of Fez and Morocco, and particularly in Haha and other southern provinces, where the people lived in comparative prosperity and culture, where there were men of education quite equal to the average of the period in Europe, and even scholars of some distinction.

Yet it is difficult to fix the site of some of these, and at the present day squalor and ignorance take the place of the wealth and refinement which was then so notable. In all of them the population has dwindled away. Others, though bearing traces of former grandeur, are now little better than heaps of ruins and miserable villages, while the population of the country cannot be a third of what it was when Leo wrote. The iron and copper mines which were worked in his day are now scarcely legendary, and various crafts then generally practised have in our time ceased to be followed. Education was then so widespread that when Leo finds certain out-of-the-way districts deficient in a knowledge of reading and writing, the fact is considered worthy of note. No modern traveller would think this circumstance worthy of a special memorandum in his diary.

But otherwise, the Morocco of our day is amazingly like the Morocco which Leo knew so well; just as his Africa, as a whole, is very like the Africa of Herodotus or the "Dark Continent" of the latest explorer. There is always the same tawdry magnificence and the same squalid misery; the same absence of any middle class between wealthy despotism and grinding poverty; the same lack of change, or desire to change, among the people. The population is smaller and poorer, and as a whole less enlightened; yet they cherish the same customs as their forefathers, and the inhabitants of particular sections of the country are distinguished by traits identical with those which the keen-eyed Moor noted four hundred years ago, and the more remote the region the more exactly do Leo's words still apply. Cross-question, for example, an Arab from Sus on the places described in this work, and you will be startled to find him—of course entirely ignorant of the purport of your questions, and of the existence of the old historian—giving answers which confirm almost verbatim the statements made by him.

And the government is much what it always was. The Empire is now nominally under a single head. Yet now, as always, the Chiefs of the Southern Arabs, and of the Berber tribes of the North, and of some Arab septs, etc., recognise the authority of the Sultan only when they are defeated by the army.
with which he is all the summer marching to-and-fro, collecting his internal revenue, or engaged in punitory expeditions against the refractory subjects who have spitefully used his officials. The merciless tyranny of the latter is as abominable as ever, and the injustice, the venality, and the ruthlessness which are the concomitants of Moorish rule, even more remarkable in our day than his, though possibly the central authority is now stronger than it was four hundred years ago. However, many of the Atlas, Sus and Riff tribes preserve their autonomy more or less perfectly, though the democratic governments which prevailed in towns like Sallee, Tarudent and Saffi (before the Portuguese seized it) have long ago been crushed.

The Berbers of 1895 love the Arabs no better than those of 1455 did; and then, as now, the former, living in stationary villages on the hills, are liable to raid the flocks of the tented nomads in the valleys below, with murderous reprisals when opportunity offers on the part of the latter. No later than 1888, the then Sultan, Mulai el-Hasan, on one of his expeditions against the Beni-M’tir and other mountain tribes, got himself so hemmed in that it was with difficulty a way was cut out for him by the courage of Kald Maclean and his troops; and still more recently one of the late Sultan's sons had an equally narrow escape from the Zenmur tribe, whose country is not far from Sallee-Rabat. In short, the ancient "Mauri"-which the Berbers are-have not, in spite of the lapse of twelve centuries,
In other respects, the interior is still left entirely to the natives, in spite of the fact that by treaty obligation every part of the Empire is free to the "Nasrgni". Many parts can, indeed, be visited only at the peril of the traveller, and there are vast regions in Sus and in the Atlas, and the country beyond, where not even the safe-conduct of the Sultan is of any service to the explorer. During the period of Leo Africanus, and certainly for more than two centuries subsequently, Europeans visited the out-of-the-way parts of Morocco almost as freely as they do at present, and were even able to trade with places, such as Tarudent, from which they are at present practically debarred.'

Still, take it as a whole, Morocco has not changed to anything like the same extent which Europe has in four centuries, though it would-from the facts mentioned-be unreasonable to expect every little town and village which Leo described to exist, or to be exactly as they were in his day. It is still as roadless, and as bridgeless as ever. Indeed, it is probable that not one of the half dozen bridges in the Empire dates from a period much later than his, and the few ferryboats afloat in his time have, in

\[1\] Roger Bodenham, previous to his trip to Mexico in 1564 (Hakluyt, vol. iii), used to "trade and traffic to the ports of Barbary", and suffered loss and hindrance "by that new trade begun by me in the city of Fez"; and when Captain John Smith ---afterwards of New England---went to Morocco in search of soldierly service, he found several free Englishmen prospering in Marakesh (Bibliography of Morocco, No. 173).

INTRODUCTION.

some instances, not been replaced. The trains of loaded camels, horses, mules and donkeys, and the long cavalcade of mountain travellers, still trudge at a walking pace over the same narrow bridle-paths as their predecessors did a thousand years or more ago. There has been absolutely no change, except for the worse, and any advances made in the coast towns are due entirely to the enterprise of foreigners. An exception might be made in favour of the army, though it is questionable whether the instruction of the tribesmen in the use of instruments of more murderous efficiency can be described as progress. Part of the standing army is now commanded and drilled by European officers, and a French military commission, forced upon the Sultan, usually accompanies his punitive expeditions. A few thousands of the men are provided with arms of greater precision than flint-lock muskets, and among the equipment of the forces are some Krupp and Armstrong guns. But medical staff or commissariat are as little known to the Shereefian army as humanity and the first principles of hygiene. "Copples" of wretched prisoners secured by the neck accompany the victors in the civil broils described, and happy is the fate of these unfortunates if their heads surmount the city gates. Too frequently they are sent to rot in loathsome dungeons; or if believed to be rich, or the relations of rich people, they are tortured until they discover their hoards, or their kinsmen relieve their sufferings by disgorging to their cruel gaolers-which has h12 xcix
INTRODUCTION.
been the way of Barbary and the East generally ever since time was. Algeria—though this name was not then devised has changed most of all, though there, as elsewhere, the ways of the country people are not widely different from what they have been for more than eleven centuries. When Leo travelled through that region it was still broken up into a number of small independent kingdoms, under native princes of Arab or Berber descent; though then, as was the case for long subsequently, the mountain tribes and the desert nomads recognised no rulers but their own chiefs. The most powerful of these petty monarchs was the King of Tlemcen, though most of what is now Algeria was then under the Kings of Tunis. But the provinces of Algiers proper and Tennez were generally bestowed by the Tlemcen sovereign on sons or relations, who acted nominally as Vicerroys, though in reality as all but independent rulers. But a little before Leo visited the country the disruption had begun, by Spain (1505–10) taking advantage of dissensions among these petty sovereigns to invade the country, and conquer in succession Mersa el-Kebir, Oran, Delys, Bougia, Mostaganem, Tlemcen and Algiers, in so far that this town consented to pay tribute and to abandon piracy. To enforce these conditions a fort was built on the Pefion, part of which still exists as a foundation for the lighthouse.

INTRODUCTION.
It was at this juncture (1516) that the so-called "Emir", Salem ben Teumi, hearing of the exploits of the brothers Bab-Arftj and Kheir ed-Din, better known as Barbarossa, a corruption of the elder brother's Turkish name—invited them to help. These two remarkable adventurers, whose names often figure in Leo, were—so it is generally accepted, though the question is a disputed one—the sons of Mohammed, an Albanian renegade, who occupied a post of some importance in the navy of the Sultan Bayazid. Retiring to the island of Mitylene to escape punishment for a misdemeanour, he married in the town of Bonava a Christian named Catalina, the widow of a Greek priest. This is the statement of Sandoval (Historie de la vida y hechos del imperador Carlos V, 1581), who positively contradicts the statement of Paulus Jovius (Pauli Jovii Novocomensis Episcopi Nucerini, Historia sui Temporis, lib. xxiii, cited in Rerum a Carolo V Casare Augusto in Africa bello gestarum Commentarii, etc. Antwerp, 1555, p. 70) that they were the sons of a Greek priest who had apostatised (vol. i, p. 65), and there is no basis for the assertion of Marmol that the elder brother was born in Sicily of an Andalusian mother. By his Greek wife Mohammed had six children: two daughters, brought up as Christians (one of them as a Religieuse), and four sons, who, as was the fashion in these mixed marriages, embraced the religion of their father. The eldest of these was Arfi, or Arfj (according to an Arabic MS. of Gazewat in the National Library of France, translated by Venture); Horuc (according to Sandoval), Latinised by Paulus Jovius into Horucius, and in the MS. memoirs of Cardinal de Granvelle in the Besançon Library into Horucius; and Aruch, according to Haedo's spelling. He was brought up as a sailor. (2) IshAk, a carpenter. (3) Kheir ed-Din, variously rendered in European histories by Hairadin,
Chalradine, Haradin, and Tcherdine—WHO was brought up to his father's newly-adopted trade of pottery.

(4) Mohammed (sometimes called Ilyas), who aspired to the holy life of a Marabout, or Saint. Sandoval (vol. i, p. 64) is the authority for the doubtful assertion so widely credited that he derived his well-known name of Barbarossa from the Knights of

INTRODUCTION.

him to dislodge the Spaniards from the castle commanding the town, of which he was the nominal ruler. These Corsairs had already (1512-1515) failed to take Bougia, but in 1514 they had turned the Genoese out of Jijelli. Accordingly, they readily accepted Salem ben Teumi's invitation, and not only succeeded in making themselves masters of the town, but putting the Emir to death proclaimed BAtba-Aruj king in his place. This was the beginning of the Turkish Empire in Algeria, as Leo relates, partly from his own observations, but to a large extent from second-hand information, some of the events noted having happened after his departure from the country. For, sore pressed by the Spaniards on one side, and by the native Algerians on the other, Kheir ed-Din, who had succeeded his brother (i 518), put himself under the suzerainty of Malta (Rhodes), by whom he was taken captive and served as a galley-slave—"Y como era vermejo", he tells us, "llamaren le todos Barbarrosa no saviendo por ventura su proprio nombre."

-Rotalier, Ilhistoire d'Alger (184), t. i, pp. 76, 77, 79; M. de Grammont (Revue Africaine, No. 17, (1885), p. 226; and Hisloire d'Alger sous la domination Turque [1887]) is, however, convinced that the old etymology is the right one. Mercier, Histoire de lAfrique septenrionale, t. ii (1888), p. 426, etc.; Rang et Denis, Fondation de la Regence d'Alger, Ristoire de Barberousse, Chronique Arabe du xviiie sikcle, publi? sur un manuscript de la Bibliothèque royale, avec un appendice et des notes, etc. (1837), vol. ii, pp. 103-107. This anonymous Arab author describes them as the sons of Yakub Reis: "honn&é musulman qui faisait un petit commerce maritime, dans l'Archepef, avec un navire qu'il commandait."

INTRODUCTION.

the Sultan, Selim I, by whom he was named Pasha of Algiers.

The subsequent events it is not necessary to recapitulate at any length. The Turks gradually extended their conquests over the whole of Algeria, and all the Barbary States except Morocco, where they never had a footing (though they marched on Fez). The Pashas were succeeded by the Deys, whose vile rule lasted until 1830, when the French seized Algiers, and in the course of a few years, after in vain trying the experiment of suzerain native princes,' took possession of the entire region. The result was good government, good roads, fine railways, public buildings far in advance of the necessities of the colony, and the transformation of all the old crumbling AraboTurkish towns.
But of the Turkish rule Leo said little. Even that of Barbarossa had not fairly begun when he was taken to Italy. Yet he saw most of the incidents described, having travelled from Fez to Tunis, and been entertained by "one that was sent ambassadour from the people of Alger into Spanie, from whence he brought three thousand bookes written in the Arabian toong"; an event dating prior to the Spanish domination mentioned. He was at Bougia during the time Barbarossa was besieging the place. There were two sieges of this town, one in 1512 by BhbhAr'j (who lost an arm in the attack), and the other, not more successful, in 1515, by his brother, Kheir ed-Din. As Leo expressly limits the name of Barbarossa to the elder brother, this must refer to the former of these two sieges. But as the Moor tells us that he afterwards proceeded to Constantirie in the due course of his journey, and next to Tunis, hearing in the meantime that "Barbarossa was slaine at Tremizen,1 and that his brother called Cairadin succeeded in the government of Alger", (which took place in 1518), this could scarcely have referred to the same journey. It is, indeed, probable that the news reached him after he had left the country, for immediately after he tells us how "we heard also" that "the Emperour Charles the fift had sent two armes to surprize Alger: the first whereof was destroied vpon the plaine of Alger, and the second hauing assailed the towne three daies together was partly slaine and partly taken by

1 This event took place not actually at Tlemsen—as usually stated—but at the River of Oudja, or Rio Salado, west of Oran, when, after his escape from the city which he had defended for twenty-six days, Arefij was overtaken by Alfonso Velasco (not Martin d'Agote, as Marmol has it). The man who slew him after a desperate fight was the ensign, Garcia de Tineo. On this subject, Elie de Primaudace's Histoire de l'occupation Espagne en Afrique (1506-1574): Documents inédits (1875), p. 25 et passim, and Berbrugger, Revue Africaine, vol. iv, pp. 25-33, may be profitably studied4

INTRODUCTION.

Barbarossa, insomuch that very few escaped backe into Spaine. This was done in the yeere of the Hegeira nine hundred and twentie two"—which gives the incorrect date of A.D. 1516. Moreover, though the army sent by Ximenes (who became Regent of Spain on the death of Ferdinand1) under the command of Diego de Vera was so utterly routed, that after his return to Spain the children shouted after him that Barbarossa with one arm defeated him with two, the defeat was not quite
so complete as Leo describes. Still, as he saw the close of the Arab and Berber rule, and the beginning of the Turkish, this portion of the Moor's narrative is more than usually valuable.

Tunisia has changed perhaps less than Algeria, so far as the civilisation of the people is concerned; but territorially it has altered quite as much. Before the events which led to the settlement of the Turks in Barbary, the Kings of Tunis were the most powerful of the sovereigns in that part of North Africa. Their power extended from Tripoli in the east, to Constantine and Bougia in the west, these principalities being generally governed by relatives, sons or favourites of the king. In addition to the authority they exercised in their immediate dominions, the Tunisian sovereigns had much influence with the Arab tribes, in what it is now the

INTRODUCTION.

fashion to call their "hinterland". But several of the provincial governors were, as in the neighbouring kingdoms, almost independent. It is perhaps needless to add that neither Bougia nor Constantine is now a fief of Tunis, while Tripoli has long been a possession of the Sultan of Turkey.

When Leo knew Tunis (before 1520, for his subsequent residence and death in that country are problematical) Mulai Abu 'Abd Allah Mohammed, of the Beni Hafs dynasty, was King. He died in 1525. For a time his heirs maintained, with the help of the Spaniards to whom they had become vassals, a nominal power, alternated by tussles with Dragut the Corsair, who was twice master of the city of Tunis. But the last of these suffragan princes disappeared when the Turks ousted the Spaniards. Then, from the 3rd of September 1573, to the 12th of May 1881, the "Khutba" was read in the name of the reigning Sultan of the Osmanlis. But from the latter of these dates, Tunis, from being a Regency of Turkey though in reality governed by a Dey or a Bey independent in everything but the name—became a Protectorate of France, or, in other words, a colony conveniently ruled in a despotic manner by a Resident who, as Mayor of the Palace, issues his decrees in the name of Sidi 'Ali, brother of Mohammed esSadok, the ruler whom the French insisted on "protecting". He will, most likely, even as rot faindant, be the last reigning descendant of Hussein ben 'Ali, the Greek renegade, who, in 1705, was elected Bey by the Turkish soldiers, and thus founded the dynasty now on the eve of expiring.

Since the new condition of affairs, Tunisia has changed somewhat. Justice is better, if not so cheap, and tyranny, other than that of the bureaucrat, is unknown. The coast-towns have all received a garrison, and have acquired a varnish of the cafr type of civilisation; a railway runs from the city of Tunis to Algiers, and two smaller ones to Goletta, Carthage, and Hamman el-Enf. There is
a boulevard and a European quarter outside the walls of the capital, which are already getting breached; and a costly system of administration has been introduced, entirely unsuited to a land in which the old patriarchal rule, purified and improved, would have been amply sufficient.

But the interior is even yet very little affected by the Franks. There the Arabs live as they have always lived, and though the traveller is no longer in the imminent peril of losing his purse and his life, as he was before the days of the protectorate, the habits of the tribesmen are unaltered.

Tripoli, Barca and Cyrenaica are perhaps the least changed of all the Barbary States—less so than even Morocco. For, though the country is now a vilayet of the Ottoman Empire, there has been little alteration in it during the last four or five centuries. When Leo visited this region, it was in a state of transition as regards rulers. Don Pedro Navarro had just (1510) wrested the city of Tripoli from the Tunisian sovereign, on behalf of Ferdinand

cvii

INTRODUCTION.

the Catholic. Thirteen years later, Charles V bestowed it upon the Knights of St. John, who, in 1553, were compelled to surrender to Dragut and Sinan, the Turkish pirates. Up to the year 1714 the country was governed by Bashaws, who were tributary to Constantinople, in much the same way that the Deys of Algiers or the Beys of Tunis were. But, in that year, Ahmed Pasha Karamanli became actually independent, and his descendants continued to rule Tripoli until 1835, when the Turks took advantage of a civil war to reassert their own authority.

Yet all these revolutions affected only the city of Tripoli and a few of the coast towns. A little way into the interior, the Arabs and Berbers lived without troubling themselves much over who had, or who had not, "Tarabulus al-Gharb", except in so far as the quarrels for mastery interfered with their caravan trade, the crocus gardens from whence their saffron was produced, or their chance of plunder.

Tripoli (like the adjoining parts of Barbary) ought to-day to be under the successors of the Knights; for the Maltese are still their commercial masters, and, beyond such civilisation as they have brought in their train, this dirty Moorish town bears few traces, except in its battered fortifications, of having been so often contended for by half the nations of Christendom. A few miles beyond the walls the country is stationary. Roads and wheeled carriages are unknown, the safety of travellers not to be reckoned on, and railways a dream which never disturbs the sleep of the drowsy inhabitants,

INTRODUCTION.

Egypt is, so far as the river-side and coast towns are concerned, a very different land from that which Leo described. All these are Frenchified or Anglicised. Railways thread the country, and martial airs of the Gaiours' garrisons call the Faithful to prayer. But Leo made his acquaintance with the Nile Valley at an interesting period of its history, namely, just subsequent to the year 1517, when the long line of Slave Kings-called the Bahri, or Turkish, and the Burgi, or Circassian, Mamelukes, to whose enlightened love of art Cairo still bears witness-
came to an end on the conquest of Egypt by the Ottoman Sultan Selim I. Leo's description of Lower Egypt contains the earliest account which we possess of the "Soldan's" court, both before and after this grievous misfortune for the Delta. Otherwise, the data he supplies regarding the country at large are less important than those concerning other regions; and he seems to have compiled his accounts of "Anthius" and other places either from inaccurate information, or from manuscripts which he met with in Rome, since it is difficult to make them fit in with known facts.

Finally, the central portions of Africa visited by him have not until lately changed at all (except those situated on the fringe of the desert south of Algeria or on the Upper Niger), or, at least, only in so far that one dynasty of black kings has been succeeded by another. His description of the towns would serve equally well today: his accounts of the habits of the people are not very different from those brought home by the most recent explorers. But in the four centuries which have elapsed since his day, Africa has been penetrated in every direction, and Timbuktu, of which he gives the earliest account known to us, has been reached by many travellers; while the Niger was descended in 1889 from Barnaku almost to the city itself which is not on the river-by a French steamlaunch,' and in 1894 this city was occupied by a French garrison.

Timbuktu is thus, with most of the Sahara, now brought within the French "sphere of influence". In time a railway will reach it either from Senegal or from Algeria, and this once mysterious city will receive unbelieving visitors as complacently as has the holy city of Kairwgn since 1882. Bornu and Sokoto and "Ghinea", with much of the Upper Niger and Lake Tschad country may, in like manner, become at some future date a Protectorate of Great Britain.

In his particularisation of the genealogies of the Upper Niger kings, Leo falls into some blunders, which will be pointed out in the proper place, and his natural history is, with few exceptions, very indifferent. This, indeed, is the most unsatisfactory section of Leo's volume; his critical faculty is at its worst when he enlarges on "the strange beasts and other living creatures of Africa"-the lions 120 feet in length, "the sea-oxe," and "the huge and monstrous dragons"-notwithstanding his amusing patronage of Pliny, who was among the number of authors he had read with evident attention.

Altogether, in closing these preliminary critical remarks on the old African traveller, it is not saying more than he deserves when I affirm that he is one of the
few geographical writers of his age who can still be read, not merely for the purposes of the historian, or for entertainment—and he is good for both—but also for actual information regarding the condition of the countries and the habits of the people described by him.

A GEOGRAPHICAL HISTORIE of AFRICA, Written in Arabiceaud7taian by JOHN LEo a More, borne in GranadAnd brought vp in Barbarie. Wherein be hath at large decribed, not onely the qualities, fituation, And true diPlances ofthe regions, cies, townesmountamies, rivers, and other plac es throughout all the north and pricipall pdrtes of -Africa; but alfo the dfeents and famies of their kings, the caufes and euents of their warres, with their manners cuZtc'tmes, religions, and cmile gouvernment, and many. other memorable matters . gathered partly out of his owne diligent ob/eruations, and portly out of the ancient records and chronicle: o/the 4rabtans and Mores. Before which, out of the beft a ncient and rmoderne writers, is prefixed agenerall dekription of Africa, and alfo a particular treatifc of all the maine lands and ffles vndescribed by lobn Lea. And afer the fameMi vexed a relation ofthe grtrt Princes,and tie mantfoldrelioni v that parr ofthe world. "Tranflated and collee&ed by I OH N Po 0 Y, latCly of Goneuil and Caius College in Cambridge. L ON DINI, 9mpenfis 9eorg. Rihop. 1600

TO THE RIGHT HONORAble sir ROBERT CECIL, Knight, princiPall Secretarie to her Maiestie, Master of the Court of Wardes and Liueries, and one of her Highnes most Honorable priuie Counsell. ,oCoo Ioo n 0 0 heere the first fruits, or rather the tender buddes and blossomes of my labours. Which least in this their winterly sprouting they might perhaps by some bitter blasts of censure o be frost-nipped, I humbly recomooo~oo.o;ooo mend to your Honorable protection. Most due they are onely to your selfe, being for the greatest part nothing else, but a large illustration of certaine southern voiages of the English, alreadie dedicated to your Honour. And at this time especially I thought they would prooue the more acceptable in that the Marocan ambassadour (whose Kings dominions are heere most amplie and particularly described) hath so lately treated with your Honour concerning matters of that estate. Vouchsafe therefore (right Honorable) according to your accustomed humanitie towards learning, to accept of this Geographcall historie, in like manner as it
pleased your Honour not long since most fauourablie to take in good part those commendable indeuours of my reuerend friend M. Richard Hakluyt: who out of his mature iudgement in these studies, knowing the excellencie of this storie aboue all others in the same kinde, was the onely man that mooued me to translate it. At London this three and fortieth most ioifull Coronation-day of her sacred Maiestie. 
1 6 o o. Your Honors alwaies most readie to be commanded IOHN PORY.

To the Reader.
Jue me leaue (gentle Readers) if not to present vnto your knowledge, bicause 0 some perhaps may as wel be informed as my selfe; yet, to call to your remembrance, some fewe particulars, concerning this Geographica ll Historie, and Iohn Leo the author thereof.
Who albeit by birth a More, and by religion for many yeeres a Mahumetan: yet if you consider his Parentage, Witte, Education, Learning, Emploiments, Trauels, and his conuersion to Christianitie; you shall finde him not altogithe vnfit to vndertake such an enterprize; nor vnwoorthy to be regarded. First therefore his Parentage seemeth not to haue bin ignoble: seeing (as in his second booke himselfe testifteth) an Vncle of his was so Honorabl e a person, and so excellent an Oratour and Poet; that he was sent as a principall A mbassadour, from the king of Fez, to the king of Tombuto.' And whether this our Author were borne at Granada in Spaine, (as it is most likely) or in some part of Africa;2 certaine it is, that in naturall sharpenes and viuacitie of Wit, he most liuely resembled those great and classickall authours, Pomponius Mela, Iustinus Historicus, Columella, Seneca, Quintillian, Orosius, Prudentius, Martial, Luuenal, Auicen, &c. reputed all for Spanish writers; as likewise Terentius Afer, Tertullian, Saint Augustine, Victor, Optatus, &c. knowen to be writers of Africa. But amongst great varietie which are to be found in the processe of this

TO THE READER. 5 notable discourse, I will heere lay before your view one onely patterne of his surpassing wit. In his second booke therefore, if you peruse the description of Mount Tenuueues, you shall there finde the learned and sweete Arabian verses of Iohn Leo, not being then fully sixteene yeeres of age, so highly esteemed by the Prince of the same mountaine, that in recompence thereof, after bountifull entertainment, he dismissed him with gifts of great value. Neither wanted he the best Education that all Barbarie could affoord For being euen from his tender yeeres trained vp at the Vnuiersitie of Fez, in Grammar, Poetrie, Rhetorick, Philosophie, Historie, Cabala, Astronomie, and other
ingenuous sciences, and hauing so great acquaintance and conversation in the kings court: how could he choose but prooue in his kinde a most accomplished and absolute man? So as I may iustly say (if the comparision be tolerable) that as Moses was learned in all the wisedome of the Egyptians; so likewise was Leo, in that of the Arabians and Mores.

And that he was not meanely, but extraordinarily learned; let me keepe silence, that the admirable fruits of his rare Learning, and this Geographicall Historie among the rest may beare record. Besides which, he wrote an Arabian Grammar, highly commended by a great Linguist of Italie who had the sight and examination thereof, as likewise a booke of the liues oy the Arabian Philosophers; and a discourse of the religion of Mahumet; with duers excellent Poems, and other monuments of his industrie, which are not come to light.

Now as concerning his Emploiments, were they not such as might well beseeme a man of good worth? For (to omit how many courts and campes of princes he had frequented) did not he, as himselfe in his third booke witnesseth, personally serue king Mahumet of Fez in his wars against Arzilla? And was he not at another time, as appeareth out of his second

TO THE READER.

Booke, in seruice and honorable place vnder the same king of Fez, and sent ambassadour by him to the king of Maroco? Yea, how often in regard of his singular knowledge and judgement in the lawes of those countries, was he appointed, and sometimes constrained at duers strange cities and townes through which he travelled, to become a judge and arbiter in matters of greatest moment? Moreover as touching his exceeding-great Trauels, had he not at the first beeene a More and a Mahumetan in religion, and most ski full in the languages and customs of the Arabians and Africans, and for the most part travelled in Carouans, or vnder the authoritie, safe conduct, and commendation of great princes: I maruell much how euer he should haue escaped so manie thousands of imminent dangers. And (all the former notwithstanding) I maruel much more, how euer he escaped them. For how many desolate cold mountaines, and huge, drie, and barren deserts passed he? How often was he in hazard to haue beeene captiued, or to haue had his throte cut by the prouling Arabians, and wilde Mores? And how hardly manie times escaped he the Lyons greedie mouth, and the deuouring iawes of the Crocodile? But if you will needes haue a briefe iournall of his travelles, you may see in the end of his eight booke, what he writeth jor himselfe. Wherefore (saith he) if it shall please God to vouchsafe me longer life, I purpose to describe all the regions of Asia which I haue travelled: to wit, Arabia Deserta, Arabia Petrea, Arabia Felix, the Asian part of Egypt, Armenia, and some part of Tartaria; all which countries I sawe and passed through in the time of my youth. Likewise I will describe my last voiages from Constantinople to Egypt, and from thence vnto Italy, &c. Besides all which places he had also beeene at Tauris in Persia: and of his owne countrey, and other African regions adioining and remote, he was so diligent a traueller; that there was no kingdome, prouince, signorie, or citie; or
scarcelie any towne, village, mountaine, valley, riuier, or forrest, &c. which he left
vnuisited. And so muck the more credite and commendation deserueth this
woorthy Historie of his; in that it is (except the antiquities, and certaine other
incidents) nothing else but a large Itinerarium or Journal of his African voiages :
neither describeth he almost any one particular place, where hismelfe had not
sometime beeene an eie-witnes.
But, not to forget His conuersion to Christianitie, amidst all these his busie and
dangerous trauels, it pleased the diuine prouidence, for the discouery and
manifestation of Gods woonderfull works, and of his dreadfull and just
iudgements performed in Africa (which before the time of John Leo, were either
utterly concealed, or vnperfectly and fabulously reported both by ancient and late
writers) to deliuer this author of ours, and this present Geographicall Historie, into
the hands of certaine Italian Pirates, about the isle of Gerbi, situate in the gulfe of
Capes, betweene the cities of Tunis and Tripolis in Barbarie. Being thus taken, the
Pirates presented him and his Booke vnto Pope Leo the tenth: who esteeming of
him as of a most rich and inualuable prie, greatly reioiced at his arriuall, and gaue
him most kinde entertainement and liberall maintenance, till such time as he had
woone him to be baptized in the name of Christ, and to be called John Leo, after
the Popes owne name. And so during his abode in Italy, learning the Italian toong,
he translated this booke thereinto, being before written in Arabick. Thus much
of John Leo.
Now let vs acquaint you with the Historie it selfe. First therefore from so woorthy
an author, how could an historie proceed but of speciall woorth and consequence
? For proofe whereof I appeale vnto the translations thereof into Latine, Italian,
Spanish, French, English, and (if I be not deceiued) into some other languages,3
which argue a general approbation of the same, I appeale also to the grand and
most

TO THE READER.
Read pag. 59 iudiciall Cosmographer* Master Iohn Baptista Ramusius, of places
vndescribed bylohn sometime Secretarie to the state of Venice, who in the Leo.
Preface to his first volume of voiages, so highly commendeth
it to learned Fracastoro, and placeth euyer word in the very forefront of his
discourses, as the principal and most praisewoorthy of the all. And were
renowned Ortelius
alieu, I would vnder correction report me to him ; whether his map of Barbarie
and Biledulgerid, as also in his last Additament that of the kingdomes of Maroco
and Fez, were not particularly and from point to point framed out of this present
relation, which he also in two places at the least preferrreth farre before all other
histories written of Africa.4 But to leaue the testimonies of others, and to come
neerer to the matter it selfe; like as our prime andpeerelesse English Antiquarie
master William Camden in his learned Britannia, hath exactly described
England, Scotliland, Ireland, and the isles adiacent (the which by Leander for Italie,
by Damianus a Goez briefly for Spaine, by Belforest for France, by Munster Jor
upper Germanie, by Guiccardini for the Netherlandes, and by others for other
countries hath beene performed) so likewise this our author Iohn Leo in the
historie ensuing hath so largely, particularly, and methodically deciphered the
countries of Barbarie, Numidia, Libya, The land of Negros, and the hitherpart of
Egypt, as (I take it) neuer any writer either before or since his time hath done. For,
if you shall throughly consider him, what kingdome, province, citie, towne,
village, mountaine, vallie, riuier; yea, what temple, college, hospital, bath-stoue,
Inne; or what other memorable matter doth he omit? So doth he most iudicially
describe the temperature of the climate, and the nature of the soile, as also the
dispositions, manners, rites, customes, and most ancient pedigrees of the
inhabitants, together with the alterations of religion and estate, the conquests, and
ouerthrowes of the Romaines, Goths, and Arabians, and other things (by the way)
right

TO THE READER.

woorthie the obseruation. So that the Africans may Justly say to him, and the
English to master Camden, as the prince of Roman oratours did vnto Marcus
Varro the learnedst of his nation. Nos in patria nostra peregrinant es errantesque
Tull. Acad. tanquam hospires, tui libri quasi domum deduxerunt, vt quast. lib.
possemus aliquando, qui & vbi essemus, agnoscere. Tu xatem patriae, tu
descriptiones temporum, tu sacrorum iura, tu domesticam, tu bellicam
disciplinam, tu sedem regionum & locorum, &c. Which may thus be rudely
Englished. Wandring vp and downe like Pilgrimes in our owne natuie soile, thy
bookes haue as it were led vs the right way home; that we might at length
acknowledge both who and where we are. Thou hast reuealed the
antiquitie of our nation, the order of times, the rites of our religion, our manner of
government both in peace and warre, yea thou hast described the situation of
countries and places. &c.

Now as concerning the additions before and after this Geographicall Historie;
hauing had some spare-howers since it came first vnder the presses - I thought
good (both for the Readers satisfaction, and that Iohn Leo might not appeere too
solitarie vpon the stage) to bestowe a part of them in collecting and digesting the
same. The chiefe scope of this my enterprize is, to make a briefe and cursorie
description of all those maine lands and isles of Africa, which mine author in his
nine booke hath omitted. For he in very deed leaueh vntouched all those parts of
the African continent which lie to the south of the fifteneen kingdoms of Negros,
and to the east of Nillus. For the manifestation whereof, I haue (as truely as I could
coniecture) in the mappe adioined to this booke, caused a list or border of small
prickes to be engrauen; which running westward from the mouth of Nillus to The
streights of Gibraltar, and from thence southward to the coast of Guinie, and then
eastward to the banks of Nillus, and so northward to the place where it began;
dothe with advantage

TO THE READER.

include allplace treated of by Leo, and excludeth the residue which by way of
Preface we haue described before the beginning of his African historie. Likewise
at the latter end I haue put downe certaine relations of the great Princes of Africa,
and of the Christian, Jewish, Mahometan, and Gentilish religions there professed. The Princes of greatest account either inhabiting or at least possessing large territories there, are first The grand Negus or Christian Emperor of Abassia or the higher Ethiopia, commonly called Presbyter The varietie of John or (as Zagazabo his owne ambassadour would haue this emperours names read in him) Prezious John; but because throughout all the Ethiopic a marginall note Pag. of relation of Francis Alvarez, being the best that euer was placed undescribed by written of those parts, he is continually named Prete Lanni, John Leo. in imitation of him I also most commonly call him by that name. Ahd so likewise though Zagazabo5 (for the more magnificent reputation of his prince) will haue his dominions called Ethiopia; yet with the consent of some approoued authors, and also to distinguish the country of this emperour from many other regions situate both in the higher Ethiopia, and in the lower; I haue set it downe in my mappe, and in my discourses do most usuall speak thereof under the name of Abassia. The other great Princes intreated of in the said relations, are The K. of Spain, The Turkish Emperour, * Or Xerifo, or The * Xarifo otherwise called The Miramoni'n or the king of serifo.
Maroco Sus and Fez, and the emperour of Monomotapa.
My methode in the discourse before Leo is after a generall preface of Africa, to begin at the Red sea, where Leo endeth; and thence (as well in the description of the maine lands, as of the isles by him untouche) to proceed on southerly to the cape of Buena esperanza; from which cape we returne toward the north, describing all along the westerne countries and isles of Africa, till we haue brought our whole descriptions to an end vpon the most southwestery parts of Barbarie, where our author John Leo beginneth his.
Et quoniam (as one faith) turpe non est, per quos pro-

TO THE READER.
seceris, agnoscere : my principall authors out of whom I haue gathered this store, are, of the ancients note, Ptolemy, Strabo, Plinie, Diodorus Siculus, &c. and amongst later writers, I haue helped my selfe out of sundrie discourses in the first Italian volume of Baptista Ramusio, as likewise out of John Barros, Castanneda, Ortelius, Osorius de reb. gest. Eman. Matthew Dresserus, Quadus, Isalario del mundo, John Huighen van Linschoten, & out of the Hollanders late voiages to the east Indies, and to San Tom6: but I am much more beholding to the history of Philippo Pigafetta, to the Ethiopic relations of Francis Alvarez, & of Damianus a Goez, and beyond all comparison (both for matter and method) most of all, to the learned Astronomer and Geographer Antonius Maginus of Padua, and to the unuersall relations written in Italian by G. B. B.
And heere, before I surcease, I must admonish the Reader of certaine faults escaped in some copies: as namely in the description of the isles in the Barbarian bay, A~otatado, for A~otado; in a marginall note ouer against the description of
Tombuto in the seventh booke of John Leo, Moneyfor Gold; in the relation of the Christianitie of Egypt, Hypostasis twice togeth, in stead of Hypostases ; and in the discourse of the Christianitie of Congo, Paulo Aquinto, for Panso Aquitimo. Other literall faults (if there be any) will not be hard for the Reader himselfe to amend.

A GENERALL DESCRIPTION
A generall description of all Africa, logitker witk a comtairison of tke ancient and new names of all the principall countries and prouinces therein. Africa other- 0 0 0 0 Hat part of inhabited lande extending wise called Libya. L southward, which we call Africa, and o the Greeks Libya, is one of the three 0 generall parts of the world knownen vnto our ancestors; which in very 0 deed was not throughly by them The greater discovered, both because the Inlands part of Africa vknownen in coulde not be trauailed in regard of huge deserts full of former ages. dangerous sands, which being driuen with the winde, put trauailers in extreme hazard of their liues; and also by reason of the long and perilous nauigation vpon the African coasts, for which cause it was by very few of ancient times compassed by nauigation, much lesse searched. or intirely known. Of which few, the principall were Hanno a Carthaginian captaine sent by the gouernours of that commonwelth for discouerie of the saide lande, and When Africa one Eudoxus that fled from Ptolemcus Lathyrus, the king of was sailed round about. Alexandria. Howbeit in these latter times it hath beene * And since often* by the Portugals sailed round about, and diligently also by the English, French, searched, especially along the shore, euen from the and Dutch. streights of Gibraltar to the enterance of the red sea ;* but * Bartholomew the first Portugall that euer doubled the cape of Buena Dias doubled the cape before; esperanqa, and coasted the south and southeast parts of but returned fearefully with- Africa, in former times vknowne, was Vasco da Gama, out .proceeding any farther. in the yeere 1497, who from hence sailed to Calicut in the The etymologie or deriuation east Indies, to the vnspeakeable gaine of the Portugals. of this worde Africa. To omit John Leo his etymologies of this name Africa;
OF 'ALL AFRICA.

Festus will haue it to be derived from the Greeke worde θετλύς, which signifieth horror or colde, and from a the particle priuatiue, as who should say, Africa is a place free from all horror and extremitie of colde, because it lieth open to the heauens, and is sandie, drie, and desert. Others say that it is called Africa quasi Aprica, that is exposed and subject to the scorching beames of the sunne, the most part thereof lying betweene the Tropicks. Iosephus wil haue it so called from Afer one of the posteritie of Abraham, and others from Afer sonne to Hercules of Libya. But it was by the Greekes called Libya, because it why Africa was called was in old time conquered by Libs the king of Mauritia. Libya. In the holie Scriptures it is called Chamesis, by the Arabianes and Ethiopians Alkebulam, and by the Indians Besecath.

In situation & shape this land of Africa is almost an Isole, being by a very small and narrowe neckland (passing ad betweene the Mediterran sea and the gulf of Arabia, alids the red se) conjoined to Asia, and in extension of ground being almost twaise as bigge as Europe, albeit for inhabitants it is not halfe so populous. Wherefore though in A comparison betweene Africa

longitude from west to east Africa be shorter then Europe and Europe. in some places, yet extendeth it so farre vnto the south, that Europe in that respect is nothing comparable vnto it : for Africa containeth almost seuentie degrees in latitude, whereas Europe stretcheth but flue and thirtie degrees: moreouer Africa is more vniforme and spacious; but Europe is of a more distracted and manifolde shape, being in sundry places dispersed & restrained by the sea. Howbeit notwithstanding Africa hath farre greater extension of The causes why Africa is so

ground then Europe, yet is it not so populous, nor so slenderly incommodious to inhabite: for the lande of Africa is in habited, many places vnhabitable; the principall causes whereof are, the scarcitie of water, the barrennes of the soile, being either covered with unprofitable sande, dust, or ashes, or else

A GENERALL DESCRIPTION

Sandie seas in being subject to extreme heate of the sunne : also there are Africa. certaine dangerous heapes of sande, which being raised by the winde, are driuen vp and downe like the waues of a tempestuous sea: In brieue, there are such abundance of venemous and hurtfull creatures, that for feare of them the land in some places can very hardly, and in others by no meane8 be manured or inhabited, be it neuer so fruitfull. Wherefore in divers parts this region lieth waste and vnpeopled: howbeit where it is inhabited, it is exceeding fertile, and that especially in the north parts thereof, lying ouer against Europe, where (according to the report of many historiographers, and cosmographers) it was in ancient times abundantly furnished with inhabitants: so likewise all the western coast betweene Cabo de buena esperan—a, and Cabo Negro situate about nineteene degrees of southerly latitude, containeth many plaines, hils, vallies, and other places most fruitfull and pleasant, it being there a continuall spring, and elsewhere also it is verie fertile, as it shall be declared more at large in the particular
descriptions of each region.
The position of The Equinoctiall circle doth in a manner diuide Africa Africa, according to the in the verie midst thereof; from whence it stretcheth not eauens. onely to each tropique, but also twelue degrees almost beyond them both: wherefore the greater part is comprized betweene the saide Tropiques vnder the Torrid or burnt Zone, for which onely cause the ancient writers supposed it to be vnhabitable and desert in so many places: which indeed is much rather to be ascribed to the waste wildernesse, the barren and sandie soile, and the scarcitie of waters and fountaines. It comprehended therefore fully and perfectly the three first northerly climates, and so many and the like climates southerly; for it is situate betweene the eleuenth north Parallele, and the eleuenth Antiparallele, or south Parallele, both which are equally distant from the Equinoctiall on either side. But about either of the foresaid extremes, the longest day consisteth of fowerteene howers and one fourth part, and about the midst, of twelue howers exactly. Likewise as touching the longitude, Africa stretcheth from the Meridian vnder fower degrees to the Meridian vnder fower-score and two degrees of longitude, to wit, from Cabo Roxo, or the Red cape on the west, to Cape Guardafu on the east side, betweene which two capes is the greatest breth of Africa. Africa hath too narrowe boundes allotted vnto it by John :P/ e bounde s of Leo and certaine others, for they disioine the greater part of Africa. Egypt and all Ethiopia there from. Wherefore it is more conuenient in this behalfe to follow Ptolemy, and the late writers, limiting the same on the north with the Mediterraene sea, and the streights of Gibraltar; on the east with the Red sea or the Arabian gulfe, and the small neckland of Asia passing betweene the Mediterranea sea, and the said gulfe; on the south (at the cape of Buena esperan~a, where it endeth in forme of a wedge) with the maine Ocean partly called the Ethiopian sea, as being neere vnto the land of Ethiopia; and on the west, from the hither side of the Equinoctiall line, with the Atlantike Ocean, (called by Ptolemy Mare Occiduum, by Dionysius ffesperium, and part thereof by the Spaniards Mar del Norte) but beyond the Equinoctiall line it is bounded westward with the Ethiopian sea.
Africa bath very many and most exceeding great The mounlairies of mountaines, the principal whereof is Mount Atlas, whose Africa. tops of incredible height rising out of the midst of sandy Mount Atlas. desertes, exalt themselues above the cloudes. This mountaine beginneth westward at that place, where it distinguisheth the Ocean by the name of Atlanticus: from whence by a perpetuall ridge, after many windings and turnings, it extendeth east toward the confines of Egypt: moreouer it is in most places rounde, hard to

A GENERALL DESCRIPTION
ascend, craggie, steepe, impassable, cold, barren, shadie, and euery where full of woods and fountaines, with cloudes alwaies houering about the tops thereof, being Theprouin- forlorn and desolate toward the Ocean, but ouer against* ces of Temizen,
Alger, Bugia, Africa minor, most fertile, and abounding with plentie of Constantina,
and Tunis. corne and of thick woods which are clad with a kinde of mossse no whit inferior to silke.
The tops of this mountaine are couered with deepe snowes euen in the midst of sommer: and sometimes when the North winds blow any thing sharpe, the snow falleth in such abundance, that it hideth the trees growing vpon the sides thereof, and is deadly both to man and beast.
Extremecold: Moreouer the fountaines which are here found, are so fountain es. extreame cold in the hottest of sommer, as if a man should dip his hand therein but for a short space, it would loose.lountaines both life, sence, and motion. Besides Mount Atlas those cilled Os Picos fragoosos: that mountaines likewise are very famous, which being situate iv to say, sharpe pointed lohn on the south part of Africa, are called by the Portugales Brros Dec. Os Picosfragosos :6 for by reason of their surpassing height lib. 8, capk. 4.
and craggie clifes it is impossible to skale them, and they are bare, forlorne, and destitute of all reliefe.
Likewise the cape commonly called Sierra Leona is as it were framed out of an exceeding high mountaine, which may be kenned a mighty distance off: the top of this mountaine is continuallie ouershadowed with cloudes, which often send forth dreadfull thunder and lightening: whereupon some think it to haue bin called by Ptolemy, and by Hanno of Carthage, The chariot of the gods.7
Likewise there are certain mountaines in Angola called Cabambe containing most rich siluer-mines, &c.

OF ALL AFRICA.

Also in Africa are certaine mightie lakes, which for their The lake oJ Zembre, which extension seem rather to be seas, the principal whereof by some others is placed wider called by some Zembre, being situate by a number of huge Mhe Equinocmountaines, and distant from the Equinoctial eleuen ortiall. twelue degrees to the south, containeth about flue hundred leagues in compass out of
which lake doe spring the famous riuers of Nilus, Zaire, and Cuama, and some affirme very strange sea-monsters to be therein.9
Africa likewise hath many exceeding great riuers, as The riuers namely Nilus, Niger, Senaga, Gambra, Zaire, Abagni, Africa. Tagassi, Coluez, Coauo, Cuama, and Maniche, or Rio del spirito santo, all which are in a manner of the same qualitie and disposition; for with their yeerlie inundations they doe most wonderfullie fatten and enrich the soile of the territories adioyning. Nilus the most famous riuer: vis. of the world, diuiding Egypt in the midst, and with his ouerflowes making it most fruitefull, continueth in his yeerely increase fortie daies, and forty daies in decrease; to wit, from the seuenteenth of Iune to the sixt of October: and this riuer after a mightie long course through Ethiopia and Egypt, dischargeth his streames into the Mediterran sea. The riuer of Niger, running through the land of Niv., Negros, called of old (as Solinus supposed) by the naturall inhabitants Astabus, and (according to Marmolius) Hued Nijar in the Arabian toung, is now esteemed by Paulus Iouius to be Gambra, and by Cadamosta the riuer of Senega; but that both of them are deceived, it is evident out of the description of Sanutus, who putteth downe the two foresaid riuers seuerallie, and thinketh Niger to be that which is now called Rio grande. This riuer taketh his beginning, as some thinke, out of a certain desert to the east, called Seu, or springeth rather out of a lake, and after a long race, falleth at length into the western Ocean. It increaseth also, for the space of fortie daies like Nilus, and is for so long space decreasing about the verie same

A GENERALL DESCRIPTION

B
time; by which inundation it bringeth such fruitfulness vnto all the land of Negros (certain mountaines onely excepted) as no place in the world can be imagined more fertile. Senaga or Canaga, a most notable riuer, called, as some thinke, Baratis by Ptolemy, and for the length thereof, and manifold strange creatures therein contained, comparable to Nilus, seuereth by his winding chanel the barren and naked soile, from the Greene and fruitefull. Moreouer it maketh a separation betweene nations of sundrie colours: for the people on this side are of a dead ash-colour, leane, and of a small stature; but on the farther side they are exceeding blacke, of tall and manly stature, and very well proportioned: howbeit neere vnto the riuier on either side, they are of a meane colour, complexion, and stature betweene both the aboue mentioned. It falleth into the sea by two mouthes, the principall whereof is about a mile broad, vp into the which the sea entreth almost 60 miles. It springeth (according to John Barros) out of two lakes (the greater whereof is now called the lake of Gaoga, but heretofore by Ptolemy Chelonidw paludes, and the lesser Ptolemy calleth Nubepalus) as These two ri- also out of a riuier named by Ptolemy Ghir. This riuier of uers of Senaga and Gambra Senaga hath great variety of strange fishes, and other are not certainly known, creatures that Rue in the water, as namely, sea-horses, whether they
be maine riuers crocodiles, winged serpents, and such like: neere vnto it of themselves, or branches and also are great store of Elephants, wilde bores, lyons, and mouthes of leopards. Gambra or Gambea a very great riuer, lying betweene Senaga and Niger, and esteemed by Sanutus to be that which Ptolemei called Stachir, fetcheth his originall from the lake of Libya, and from the fountaines which Ptolemei assigneth to the riuer of Niger: this riuer in greatnes and depth exceedeth Senaga, and hath many vknowne riuers falling thereinto, and bringeth forth all kindes of liuing creatures that Senaga doth. In the midst The isle of Elephants. of this riuer standeth the Isle of Elephants, so called, in

OF ALL AFRICA.
regarde of great numbers of those beasts. The riuer Zaire beginneth out of the same lake from whence Nilus springeth: this being one of the greatest riuers of all Africa, and utterly vnknowne vnto ancient writers, containeth at the mouth eight and twentye miles in breth, hauing a very safe harbour for ships to ride in: also there are many and great Islands in the chanell thereof, and sundrie riuers do fall thereinto, the principall whereof are Vumba, Barbele, Coanza, and Lelunda: in briefe, this riuer Zaire running through the kingdome of Congo, disgorgeth it selfe into the maine Ethiopian sea. Out of The setwo riuers of Cusame lake, which is the very fountaine of Nilus, springeth ne and Magnice (according another notable and famous riuer, which after a long race to Phiiippo Pigafetta) toward the south and east, is diuided into two branches: spring both out the northerly branch, which is exceeding great (for it of aegreatlake receiueueth sixe great riuers thereinto, and is nauigable for brinches of one rizuer.
the space of seuen hundred miles) being properly called Cuama, and the other branch more southerly, which is verie great also, being named Manich or Magnice, or Rio del spir’ito Santo.10
The promontories, capes, or headlands of Africa be verie Thepronontories or capes many, the most famous and principal wherof are, The of Africa. Cabo de buena
cape of Buena esperan~a, or good hope, Cabo verde, and esperanza. Cabo de los corrientes. The cape of Buena esperan~a or good hope is the extreame southerly point of all Africa, being a most renowned and dangerous promontorie, which in the yeere one thousand foure hundred ninetie seuen was the second time discouered by Vasco da Gama at the commandement of Don Emanuel king of Portugal: this cape the mariners were woont to cal the lion of the Ocean, and the tempestuous cape, by reason of the russling and roring of the windes, which they found there for the most part very boisterous: for the sea thereabout is exceeding rough, by reason of the continual fury of the windes; neither will any nauigatours touch vpon the cape, except B 2

A GENERALL DESCRIPTION
Cabo verde. they be enforced by meere necessitie. Cabo verde or
The greene head-land, is esteemed by some to be the same which Ptolemy
calleth Promontorium Arfinarium, & is compassed on either side by the riuers of
Senega and Cabo tie los cor- Gambra. Cabo de los corrientes, otherwise called the
cape rientes.
of San Sebastian, stretcheth foorth it selfe right ouer against the south ende of the
great Isle of Madagascar: it is a cape well knowne, by reason it is so dangerous to
double, which the Moores durst not passe for a very long
time.
And here as concerning the strange beasts, fishes,
serpents, trees, plants, and roots of Africa, as likewise touching the diseases,
where to the African people are most subject; and the varietie of languages
(excepting the Chaldwean, Egyptian, Turkish, Italian, and Spanish toongs) which
are now and haue beene of ancient times spoken in Africa; I refer the Reader to
the first and last bookes of John Leo, and to other places, where they are at large
and purposely intreated of.
The inhabit- Moreouer this part of the worlde is inhabited especialy ants oq

by flue principall nations, to wit, by the people called Cafri or Cafates, that is to
say outlawes, or lawlesse, by the Abassins, the Egyptians, the Arabians, and the
Africans or Moores, properly so called ; which last are of two kinds, namely white
or tawnie Moores, and Negroes or blacke The dinersitie Moores. Of all which
nations some are Gentiles which of religions in
Africa. worship Idols; others of the sect of Mahumet; some
others Christians; and some lewish in religion; the greatest part of which people
are thought to be descended from Cham the cursed sun of Noah ; except some
Arabians of the linage of Sem, which afterward passed into Africa.
Now the Arabians inhabiting Africa are diuided into many seuerall kinds,
possessing duers and sundrie habitations and regions; for some dwell neere the
sea shore, which retaine the name of Arabians but others inhabiting the
inland, are called Baduini. There bee likewise infinite swarmes of Arabians,
which with their wiues and children, leade a vagrant and roguish life in the
deserts, vsing tents in stead of houses: these are notable theeuies, and very
troublesome both to their neighbour-inhabitants, and also to merchants: for which
cause travellers and merchants dare not passe ouer the African deserts alone, but
onely in Carotians, which are great companies of merchants riding, and
transporting their goods vpon their camels and asses : who go very strong, and in
great numbers, for feare of the said theeuish Arabians.

Ptolemy in his fourth booke of Geography diuideth The ancient diuision of
Africa into twelue regions or prouinces: namely, Mauri-Africa by Ptolemy; and
tania Tingitana, Mauritania Coesariensis, Numidia, Africa a compariso of
propria, Cyrenaica, Marmarica, Libya propria, AEgyptus with the superior,
AEgyptus inferior, Libya interior, AEthiopia sub ,modernenanes. AEgypto, &
AEthiopia interior.
Mauritania Tingitana, the most rich and beautifull 2. [auritania Tingitana, becountry of Africa, so named of the citie Tingis, which we ingallone with the kingdomes at this day call Tanger. was sometimes also (as Plinie of iaroco andi witnesseth) called Borgundiana: moreover others haue Fez. called it by the names of Mauritania Sitiphensis, Hispania Transfretana, and Hispania Tingitana: but Solinus termeth the same Mauritania inferior. The inhabitants were of old named by the Graecians Maurusij, and by the Romaines Mauri, but the Spaniards at this present terine them Alarabes. In this part of Africa are now contained two stately kingdomes, namely the kingdome of Maroco, and the kingdome of Fez; both which are enuironed with the mountaines of Atlas, the Ocean and the Mediterranean seas, and to the east with the riuver of Muluia. Mauritania Cwsariensis, named according to the citie of Mauritania Caesariensis Cacsaria, which was so called after the name of Claudius called at this present TremiCesar, at this present bearing the name of Tiguident or c , and Alger. Tegdemt, which worde in the Arabian toong signifieth

A GENERALL DESCRIPTION ancient; was by Victor Vtiicensis, termed Mauritania major ; by Strabo Massilia, and Massmsilia, and the inhabitants thereof by Plinie Massosuli. At this present it containeth the kingdome of Tremizen, as Dominias Niger, and Giraua are of opinion. Numidia the ancient, called in the time of Ptolomey, The ancient, contayning Bugia, new, but by the Greekes (as Plinie testifieth) Metagonitis, Constantina, Bona, Mezzab, and the inhabitants thereof Numida, and Nomades; is (S-C. that region which lieth betweene The great riuver, and the riuver Megerada, ouer which countrey king Masinissa bare rule. It containeth now (as I coniecture) the prouinces of Bugia, Constantina, Bona, and Mezzab. Howbeit at this present we vnderstande by Numidia that region which lieth betweene the mountaines of Atlas and the Libyan deserts, called by John Leo and Marmolius Biledulgerid, or the lande of Dates, bicause this is the onely region for plentie of Dates, in all Africa. Africa propria Africa propria, situate vpon the Mediterran sea, betweene all one with the kingdome of the regions of old Numidia, and the Cyrene, is called by Tunis. Plinie Zeugitania, who diuideth it into the ancient and the new. At this present it is the kingdome of Tunis, for it containeth Byzacium, which by Strabo is accounted a part of Africa propria. The head of this prouince in times past was Carthage, whereof at this present there are nothing but ruines extant. Cyrene now Cyrene, or Cyrenaica, by Plinie called Pentapolis, called Mesrata. and by the Hebrews Lebahim, is esteemed by Giraua
to be at this present called Corene, and by Andrew Theuet, Assadib: but John Leo
and Marmolius name it
Mesrata.
Marmarica Marmarica is called by Plinie Mareotis, and Libya: comprehended
in the desert of howbeit at this present the desert of Barcha, described by Barcha.
John Leo in his sixt booke, containeth a great part of
calle firoria, Cyrenaica, and all Marmarica. called Sarra. But Libya propria,
retaineth till this present the name

OF ALL AFRICA.
of Libya, and is that part which the Arabians call Sarra, which worde signifieth a
desert.
Both the ancient Ethiopias are now possessed by the AEthiopia, now called
Abassins, vnder the dominion of Prete fanni. Abassia.
Egypt retaineth euen till this day, the ancient name.
The best moderne diuision of Africa, for these our times is to adde vnto the foure
general partes, Barbaria, Numidia, Libya, and the land of Negros, set done by
John Leo, three other generall partes to wit, Egypt; the inner or the vpper
Ethiopia, containing Troglodytica, Nubia, and the empire of Prete Janni; and the
lower, or the extreme Ethiopia, stretching from the said empire along the seacoast,
and through the Inland euen to the Cape of Buena Esperanqa.
Thus much of Africa in generall. Now it remaineth that we briefly describe in
particular all the principall maine landes, and islands, (vndescribed by John Leo)
which thereto belong, or adioyne; beginning first with the Red sea one of the
chief e limits of Africa, and from thence shaping our course along the easterne or
farthest quarters thereof, through the dominions of Prete fanni, the lande of
Zanguebar, the empires of Mohenemuge, and Monomotapa, and the region of
Cafaria : and then, hauing doubled the cape of Buena esperanqa, range we along
the westerne partes by the kingdomes of Angola, Congo, Anzichi, Benin, Ghinea,
and by the capes of Sierra Leona, Capo verde, and the castle of Arguin, till we
haue brought our selues to finish our course, vpon the most southwesterne partes
of Barbarie, from whence our author John Leo beginneth his.

A DESCRIPTION OF PLACES
A particular description of all the knowne borders,
coastes and inlands of Africa, which John Leo
hath left vndescribed : collected out of sundry ancient and late writers.
Of the red sea.
The red sea called by others the Arabian gulfe, and the
streight of Mecha, containing in length twelue
hundred miles, and in breith but one hundred, is deuided into three partitions or
chanelles; the middlemost whereof being called The large or deepe sea, is without
danger nauigable both day and night, because it hath from flue and twentie to
fiftie fathomes water, especially from the isle of Camaran euen to Suez stading at
the very bottome of the gulfe : the other two partitions, which are the easterne and
westerne extremities, are incumbered with so manie little isles and rocks, as it is
impossible to saile ouer them but onely by day-light, and with most expert pilots, which This isle I take are to be hired at a small island lying ouerthwart the very to be Babelmandel. mouth or entrance of the red sea; which the ancient kings of Egypt (if the report of Strabo be true) barred with a chaine, from the African, to the Arabian side. This sea is very skarce of fish; perhaps because there fall no riuers thereinto, which with their fresh and sweete waters doe much delight and nourish the fish; and the strand or shore thereof is destitute of all greene grasse, herbes, or weeds.

The portes and hauens of this sea are for the most part very dangerous and difficult to enter, by reason of the manifold windings and turnings, which must be made, to auoide the rockes. Suez called of At the very head or North end of this gulfe, standeth olde Herourn ciuitas, and Suez, which heretofore seemeth to haue bin called Ciuitas Hazion Geber Heroum, and in the times of Dauid and Salomon Hazion-

UNDESCRIBED BY TOHN LEO.

Geber, from whence the fleetes of those partes were sent to Ophir for golde and other rich commodities. Vnder the Egyptian Ptolemeys and the Romans, this towne flourished exceedingly, by reason of the infinite quantitie of merchandize brought thither from the east Indies, and Arabia. But now it is nothing so frequented; partly in regard of the mighty concurse and traffique which Mecha draweth vnto it selfe, and partly by reason of the Portugales conuiance of spices and other Indian commodities about the cape of Buena esperan~a. At this present the great Turke hath there an Arsenale, Arsenalesignif leth a storewith certaine gailles, for feare of the Portugals aforesaid :house for munition, and for against whome there haue bin dispatched from this place ai necessaries to build, retwo greate fleetes, one for the assailing of Diu, and another taire, andfurnbire, a furfor Ormuz. Howbeit because all the countries round ish afeet. about are vtterly destitute of wood, it is a matter of infinite charge to furnish forth a fleete from hence; for they are constrained to fetch their timber as far as Caramania, partly by sea, and partly vpon camels backs. At this towne of Suez they haue no fresh water; but all their water is brought them from a place sii sixe miles distant vpon camels backs, being notwithstanding brackish and bitter.

The western shore of the Red sea is inhabited with Troglodyte weye a people people called in old time Trogldytmr, which at this that iued in caues vnder the present do all of them yeelde obedience to the great earth to auoide the extrem heat.

Turke: who considering, that the fleets of the Portugales being deriued entered very often into the Red sea, and were there &-o i*p&"Aasierno Sereceued by the subiects of Prete Gianni, and did him 8., great domage; hath thereupon taken occasion not onely to conquer the Trogldytx, but also to wast and subdue a great part of Barnagasso, the most Northerlie prouince A great part o Barnagasso
A DESCRIPTION OF PLACES

strongly fortified all their sea-townes, which before lay naked and without
fortification; the other, for that the Turke also hath bin occasioned thereby to
make warre against the Prete. Wherefore they ought not to haue under
taken any such enterprise, but with full resolution and sufficient forces to accomplish
the same; for lesser attempts serue to no other end, but onely to rouze and arme the
enemie, which was before secure and quiet.

Neither is it heere to be omitted, that in the foresaide sea, a man can saile in no
ships or barks, but only those of the great Turke, or at least with his licence,
paying vnto him for tribute a good part of the fraight. For this purpose he hath
certaine Magazines or store-houses of timber, which is brought partly from the
gulf of Satalia, and partly from Nicomedia, and other places vpon the Euxin sea,
vnto Rosetto and Alexandria; from whence it is afterward transported to Cairo,
and thence to Suez.

This sea is called the Red sea, not in regard that the waters thereof be all red, but
(as some thinke) from certaine red rushes which growe vpon the shore: and (as
others are of opinion) from a kinde of red earth which in sundry places it hath at
the bottome: which earth dieth not the very substance of the water red, but by
transparence causeth it (especially neere the shore) to appeere of that colour.

Africa Troglodytica.

That sandie, barren, and desert part of Africa which
lieth betweene Nilus and the Red sea, especially to the south of the tropike, was in
old times inhabited by the Troglodytx,13 a people so called, bicause of their
dwelling in caues vnder the ground. Along this westerne coast of the Red sea
runneth a ridge of mountaines, which being an occasion that the inland riuers can
not fall into the saide sea, they are forced to discharge themselues into Nilus.

UNDSCRIBED BY IOHN LEO.
The foresaide mountaines and sea coast are now inhabited by Mahumetans, being
partly Arabians, and partly Turkes: which not many yeeres ago haue attempted to
saile that sea, and to invade the regions adjoinging. The naturall inhabitants are a
rude barbarous people, and very poore and beggerly. The chiefe places of
habitation are Corondol,14 a speciall good porte; Alcosser5 a place well
knowne, bicause that neere vnto it the saide mountaines open themselues, and
give passage to the bringing in of the fruits and commodities of Abassia;
Suachen16

esteemed one of the principall ports in all the streights, and being made by an
island. Here resideth the Bassa of the great Turke, which is called the gouenour of
Abassia, with three thousand soldiers or thereabout.
Next followeth Ercoco17 the onely hauen towne of the Prete, lying ouer against
the little isle of Mazua:18 and heere the mountaines make an other opening or
passage, for transporting of victuals out of the lande of the saide Prete Ianni.
hence almost to the very entrance of the Red sea, the coast is at this present
uninhabited, forlorn, and desert. Likewise from Suachen to Mazua is a
continuall woode, the trees whereof are but of small woorth. Just within the saide
entrance standeth the towne and port of Vela, under the iurisdiction of the king
of Dancali a Moore.

Vpon all this west shore of the Red sea, as likewise vpon the contrary east shore,
scarcitie of water is the cause, why there are so fewe, and so small places of
habitation; and the people runne and flocke togethor, where they may finde any pit
or fountaine of water.

Some curious reader might here expect, because I haue nowe passed so neere the
frontiers of Egypt, that I should make an exact description of that most famous
and fruiteful prouince, and likewise of the great city of Alcair, and of the
inundation and decrease of Nilus: all which, because

A DESCRIPTION OF PLACES
they are expressed in most orient and liuelie colours by our author John Leo; I
should shew my selfe both injurious to him, and tedious to all iudiciall readers, in
anticipating and forestalling that, before the beginning of his booke, which he so
neere the end doth in such large and particular wise intreate of. Now therefore let
vs proceed to the upper or inner Ethiopia, beginning with the first and most
northerly prouince thereof called Nubia.

Nubia.
Passing therefore westward from the Island of Siene,
you enter into the prouince of Nubia, bordering on the west vpon Gaoga, eastward vpon the rier Nilus, towards the North, vpon Egypt, and southward vpon the desert of Goran. The inhabitants thereof called by Strabo Nia; Hue
at this present (as Francisco Aluarez reporteth) a most miserable and wretched
kinde of life; for hauing lost the sinceritie and light of the gospel, they do
embrace infinite corruptions of the Jewish and Mahumetan religions. At the same
time when the foresaid Aluarez was in Abassia, there came certaine messengers
out of Nubia, to make suit vnto the Prete, that he would send them priests, and
such persons as might preach and administer the sacraments vnto them. But he
returned answere, that he could not in regard of the scarcitie of great clergie-men
in his dominions: The said messengers reported, that the Nubians had sent often to
Rome for a bishop; but being afterward by the invasions of the Moores and the
calamitie of warre, cut short of that assistance, they fell for want of teachers and
ministers, into extreme ignorance of Christian religion, and by little and little were
infected with the impious and abominable sects of the lewes and Mahumetans.
Some Portugals trauailing to those parts, sawe many churches destroie
d by the handes of the Arabians, and in some

VDDESCRIBED BY IOHN LEO.
places the pictures of saints painted vpon the wals. They are gouerned by women,
and call their Queene Gaua. Their principall citie called Dangala, and consisting
of Dangala the about ten thousand housethoulds, is a place of great traffike, Nubia.
because it is so neere vnto Egypt and the rier Nilus. All their other habitations are
villages and base cottages. Their houses are built of claie, and couered with strawe. The chiefe commodities of this region are rice, stone-sugar, sanders, iuorie (for they take many elephants) as likewise abundance of ciuet, and golde in great plentie. The countrey is for the most part sandie: howbeit there are certaine mightie lakes, by the benefite whereof a great part of Nubia is waterd and made fruitfull.

The Isle of Meroe.

M Eroe called at this time by the names of Guengare, Amara, and Nobe, being the greatest and fairest isle which Nilus maketh, and resembled by Herodotus to the shape of a target, containeth in brethd a thousand, and in length three thousand stadious or furlongs. It aboundeth with golde, siluer, copper, iron, Eben-wood, palme-trees, and other such commodities as are in Nubia. Some write, that there growe canes or reeds of so huge a bignes, that the people make botes of them. Heere also you have minerall salt, and lions, elephants, and leopards. This island is inhabited by Mahumetans, who are confederate with the Moores against Prete Ianni. Strabo affirmeth, that in old time the authoritie of the priests of this island was so great, that by a meane and ordinarie messenger they woulde command the king to murther himselfe, and woulde substitute an other in his roome. But at length, one king hauing in a certaine temple put all the saide priests to death, quite abolished that monstrous custome. And heere as Nilus vnfoldeth himselfe into two branches,

A DESCRIPTJON of PLACES

to embrace this Isalnde, he receiueth from the east the riuier of Abagni, and from the west the riuier Sarabotto, which haue likewise other smaller riuers falling into them. The Abassins are of opinion, that the Queene of Saba, which trauelled so farre to heare the wisdome of Salomon, was mistresse of this isle. Paulus Ionius saith, here are three kings, one a Gentile, the second a Moore, and the third a Christian, subiect vnto the Prete. From Meroe to Siene it is accounted fifteene daies journey by water.

* Or AEthopia the higher.

* Commonly called in Latine writers, Presbiter Iohannes, by the Moores Asiclabassi. and by the Abassins his owne subiects Acegue, that is, Emperour, &Neguz which importeth a king, and Belul also, being all one with Encoe in the Chaldean toong, both wordes signifile precious or high.

* OrBarnagasso.

* Abassia, or the emppire of Prete Ianni.

T He Abassins are a people subiect to* Prete Janni:
whose empire (if we consider the stile which he vseth in his letters) hath most ample confines. For he intituleth himselfe emperour of the great and higher Ethiopia, king of Goiame, which (as Botera supposeth) is situate betweene Nilus and Zaire; of Vangue a kingdome beyond Zaire; of Damut which confineth with the land of the Anzichi ;25 and towards the south he is called king of Cafate and Bagamidri, two prouinces bordering vpon the first great lake, which is the originall fountaine of Nilus; as likewise of the kingdomes of Xoa, Fatigar, Angote, Baru, Baaliganze, Adea, Amara, Ambea, Vague, Tigremahon, Sabaim,
where the Queene of Saba gouerned, and lastly of Barnagaes, and lorde as farre as Nubia, which bordereth upon Egypt. But at this present the center or midst of his Empire (as John Barros writeth) is the lake of Barcena. For it extendeth eastward toward the Red sea, as farre as Suaken, the space of two hundred twenty and two leagues. Howbeit betweene the sea and his dominions runneth a ridge of mountaines inhabited by Moores, who are masters of all the sea-coast along, except the porte of Ercoco, which belongeth to the Prete. And likewise on the west, his empire is restrained by another

VNDESCIBED BY IOHN LEO.

mountainous ridge stretching along the riever of Nilus, where are founde most rich mines of golde; amongst which Most richksold mines. are the mines of Damut and of Sinassij, wholie in the possession of Gentiles which pay tribute vnto the Prete. Northward it is bounded by an imaginarie line supposed to be drawn from Suachen to the beginning of the isle Meroe aboue mentioned; which line extendeth an hundred and flue and twenty leagues. From thence the Abassin borders trend south somewhat crookedly in manner of abowe, as farre as the kingdome of Ade (from the mountaines whereof springeth a riever called by Ptolemey* Raptus * And by the late writers which falleth into the sea about Melinde) for the space of Quilimanci. two hundred and fiftie nine leagues; next vnto the which borders, inhabite certaine Gentiles of blacke colour, with curled haire. And heere the saide empire is limited by the kingdome of Adel, the head citie whereof called Arar, standeth in the latitude nine degrees. So that all this great empire may containe in compass sixe hundred threescore and two leagues, little more or lesse. It is refreshed and watered by two mightie riuers which conuey their streames into Nilus, called by Ptolemey Astaboras and Astapus, and by the naturall inhabitants Abagni and Tagassi; the first whereof taketh his originall from the lake of Barcena, and the second from the lake of Colue. Barcena lieth in seuen degrees of north latitude; & Colue vnder the verie Equinoctiall. The first (besides Abagni) in gendereth also the riever of Zeila: and the second (besides Tagassi) giueth effence to the riever of Quilimanci Between Abagni and the Red sea lieth the province of Barnagasso. Sinus Barbetweene Abagni and Tagassi are the kingdoms of Angote haricus, a mighty gulfe and Fatigar; and more towards the * bay of Barbarians,27 on thebackeside oj Aprica, the provinces of Adea and of Baru: and somewhat lower, stretching (as some will haue that of Amara. In briefe, beyond the riever of Tagassi ly it)from 4- degrees of norththe regions of Bileguanzi, and of Tigremahun. erly to 17 of soerly1.f

The Abassins haue no great knowledge of Nilus by southerly

A DESCRIPTION OF PLACES
reason of the mountaines which deuide them from it; for which cause they call Abagni the father of riuers. Howbeit they say that vpon Nilus do inhabite two
great and populous nations; one of lewes towards the west, under the government of a mighty king; the other more southerly, consisting of Amazones or warlike women; whereof we will speak more at large in our relation of Monomotapa.
Throughout all the dominion of the Prete there is not any one city of importance, either for multitude of inhabitantes, for magnificent buildings, or for any other respect.
For the greatest townes there, containe not about two thousand households; the houses being (cottage-like) reared vp with clay and couered with straw, or such like base matter. Also Ptolemy intreating of these partes, maketh mention but of three or foure cities onely, which he appointeth to the south of the Isle Meroe.
Howbeit in some places upon the frontiers of Abassia there are certaine townes very fairely built, and much frequented for traffique.
The Portugales in their trauailes throughout the empire haue often declared vnnto the Abassins, how much better it were, for avoiding of the outragious injuries and losbes daily inflicted by the Moores and Mahumetans both vpon their goods and persons, if the emperour would build cities and castles stronglie walled and fortified. Whereunto they made answere, that the power of their Neguz, or emperour, consisted not in stone-walles, but in the armes of his people.
They vse not ordinarily any lime or stone, but onely for, the building of churches (saying, that so it becommeth vs to make a difference between the houses of men, and churches dedicated to God) and of their Beteneguz or houses of the emperour, wherein the gouernours of prouinces OftheseBetene- are placed to execute iustice. These Beteneguz stand guz read Francis Aluarez, continually open, and yet in the gouernours absence no ca.p. 42. man dare enter into them, vnnder paine of being punished as a traytour. Moreoucr in the city of Axuma (esteemed by them to haue benne the seate of the Queene of Saba) stand certaine ruinous buildings like vnto pyramides; which by reason of their greatnes, remaine euen til this present, notwithstanding their many yeeres antiquitie. Likewise there are in this countrie divers churches and oratories hewen out of the hard rocke, consisting but of one onely stone, some sixtie, some fortie, and some thirtie* * Oryardes: Braccia sigfathomes long, being full of windowes, and engrauen with nifleth both strange and vnknowne characters. Three such churches there are of twelue* fathomes broade and eightie in length.
The Abassins which are subject to the Prete, hold opinion, that their prince deriueth his petigree from Melich, Of Melich read more at large the sonne of Salomon, which (as they say) he begot of in Francisco Aluarez, cap. the Queene of Saba, and that themselues are descended 37.: andcap. from the officers and attendants which Salomon appointed 138. vnto this his sonne when he sent him home vnto his mother: which seemeth not altogether unlikely, if you consider the Iewish ceremonies of circumcision, obseruing of the sabaoth, & such like, which they vse vntill this present: likewise they abhorre swines flesh and
certaine other meates, which they call vncleane. The Prete absolutely gourneth in all matters, except it be in administiring of the sacraments, and ordaining of priests. Hee giueth and taketh away benefices at his pleasure; and in punishing offenders, maketh no difference betweeene his clergie and laitie. The administration of their sacraments is wholie referred to the Abuna or Patriarke. The Prete is lorde and owner of all the lands and possessions in his empire, except those of the church; which are in number infinite; for the monasteries of saint Antonie (besides which there are none of any other order) and the colleges of the Canons and of the Hermits, together with the parishes, are innumerable. They are all prouided by the king, both of reuenewes and of ornaments. They haue two winters and two summers; which they.

A DESCRIPTION OF PLACES
discerne not by colde and heate, but by rainie and faire weather. They begin their yeere vpon the 26. of August, and diuide it into twelue moneths, each moneth containing thirtie daies, whereunto they adde euery common yeere flue daies, and in the leape yeere sixe, which odde daies they call Pagomen, that is, The end of the yeere. Their ordinarie iourneies in trauelling are twelue miles a day. The common harlots dwell without their townes, and haue wages allowed them out of the common purse: neither may they enter into any cities, nor apparell themselues, but only in yellow.
The soil of Abassia aboundeth generally with graine, and in especiall with barly and all kindes of Pulse, but not so much with wheate; they haue sugar likewise (not knowing how to refine it) and hony, and cotton-wooll, orenges, cedars, and limons, grow naturally there. They haue neither melons, citrons, nor rape-roots: but many plants & herbes different from ours. Their drinke is made of barley and millet: neither haue they any wine made of Patriarke. grapes, but onely in the houses of the emperour, and the* Abuna. They are not destitute of Elephants, mules, lions, tygres, ounces, and deere. Their owne countrey horses are but of a small size: howbeit they haue also of the Arabian and the Egyptian breed, the coltes whereof within fowre daies after they be foled, they vse to suckle with kine. They haue great and terrible apes; and infinite sorts of birds; but neither cuckowes nor Pies, so farre as euer could bee learned. Heere are likewise great store of mines of gold, siluer, iron, and copper; but they know not how to digge and refine the same: for the people of this countrey are so rude and ignorant, that they haue no knowledge nor vse of any arte or occupation. Insomuch as they esteeme the carpenters or smithes craft for an vnlawfull and diabolicall kinde of science; and such as exercise the same, Hue among them like infamous persons; neither

VNDESCRIBED BY JOHN LEO.
are they permitted to enter into any of their churches. In the kingdome of Bagamidri are founde most excellent mines of siluer, which they knowe none other way how to take from the ore, but onely by melting it with fire into thinne
plates. Goiame aboundeth with base gold. In the kingdom of Damut they digge
and refine it somewhat better. They haue neither the arte of making cloth (for
which cause the greater part of them go clad in beasts skins) nor yet the manner of
hauling, fowling, or hunting; so that their countries swarme with partridges,
quailles, fesants, cranes, geese, hens, hares, deere, and other like creatures: neither
knowe they how to make any full yse or benefite of the fruitefulnes of their
countrey, nor of the commoditie of riuers. They sowe mill for the most parte,
sometimes in one place, and sometimes in another, according as the raine giueth
them opportunitie. In summe, they shew no wit nor dexterity in any thing so
much as in robbery and warre; unto both which they have a kind of naturall
inclination. Which is occasioned (as I suppose) by the continuall voyages made by
the Prete, and by their vsuall liuing in the wide fields, and that in divers and
sundry places. For to traualle continually, and remaine in the fields without any
stable or firme habitation, compelleth men as it were, of necessitie, to lay holde
on all that comes next to hande, be it their owne, or belonging to others.
They are much subject to tempests; but to an inconuenience far more inttolerable,
namely to innumerable swarmes of locusts, which bring such desolation vpon
them, as is most dreadfull to consider: for they consume whole prouinces, leaung
them quite destitute of succour both for man and beast. They vse no stamped
coine in all this empire, but insteede thereof certaine rude pieces of golde, and
little balls of iron, especially in Angote; as likewise salt and pepper, which are the
greatest riches that they can enioy.

A DESCRIPTION OF PLACES
Hence it is, that the tributes which are payed to the prince, consist onely of such
things as his owne dominions do naturally afforde; as namely of salt, gold, siluer,
corne, hides, elephants teeth, the horne of the Rhinoceros, with slaues, and such
like. Which forme of tribute (being most agreeable to nature) is used also in other
parts of Africa. Their salt is taken out of a certaine great mountaine in the
province of Balgada, and is made into square pieces. The most populous place in all Abassia is the court of the Prete, wheresoeuer it resideth; and there are erected flue or sixe thousand tents of cotton of diuers
colours, with so notable a distinction of stretes, lanes, market-places, and
Tribunals; that euen in a moment euery man knoweth his owne station and the
place where he is to doe his busines. A man may conjecture the greatnes of this
courte, if he doe but consider, that (according to the report of some who haue
there bin personally present) besides the camels which carry the tents, the mules
of carriage exceede the number of fiftie thousand. Their mules serue them to carry
burthens, and to ride vpon: but their horses are onely for the warres. The
Mahumetans haue now brought this prince to great extremity: but heretofore
while he was in his flourishing estate, he liued so majestically, that he neuer spake
but by an interpreter; nor would be seene to his subiects, but onely vpon solemnne
dayes. - At other times it was held as a great favour, if he did shew but the halfe
part of his feete to ambassadours, and to his favorites. And no maruel: for
amongst the Ethiopians it hath beeene an ancient custome (as Strabo writeth) To
adore their kinges like gods, who for the most part hue enclosed at home. This so
strange and stately kinde of gouernment, did exceedingly abase his subject:s, whom the Prete vsed like slaues; so that vpon the smallest occasions that might be, he would deprivie them of all honour and dignity, were they neuer so great.

VNDSCRIBED BY IOHN LEO.

Abassia containeth many large plaines, and very high mountaines, all fruitfull. In some places you shall haue most extreame coulde and frostie weather: but not any snowe throughout the whole empire, no not in the mountaines. The Prele hath many moores in his dominions, and vpon his borders; but the most populous of all others are the Moores called Dobas,° who are bound by a law The fors called Dubas. neuer to marry, till they can bring most euident testimony, that each of them hath slaine twelue Christians. Wherefore the Abassin merchants passe not by their country, but with most strong guards.

A particular and briefe relation of all the kingdomes and prouinces subject to the Christian Emperour of Abassia, commonly called Prele Zanni. Barnagasso.

0F all the prouinces subject vnto the Prete, that of * Barnagasso31 is best knowne vnto vs, bicause it is * Barnagaex. so neere vnto the Red sea; ouer against the shore whereof it stretcheth in length from Suachen, almost as farre as the very mouth or entrance of the streight, being (as is before saide) bounded on the south part with the mightie riuer of Abagni, which runneth westward out of the lake Out of this lake also the riuer of Barcena into Nilus. Howbeit it hath no other port ojZeilarungh westward vpon the Red sea but onely Ercoco, situate neere the Isle into the Red of Mazua; neither hath the Prete any porte but this, in all sea. his dominions; so that he is (as it were) on all sides landlocked, which is one of the greatest defects in any empire, kingdome, or state, that can be imagined. This prouince

A DESCRIPTION OF PLACES
is full of townes and villages, as likewise of riuer:s and pooles which make it exceeding fruitfull. The Viceroy or Bar in he gouernour hereof, called also by the name of *Barnagasso, Abassin toong sinifleth the resideth in the citie of Beroa, otherwise called Barua, and. Sea, and Neguz a king: so Zhat by Ptolemey (as Sanutus thinketh) Coloue, situate vpon a Barnagaex or Barnagasso, is pleasant riuer abounding with fish. Vnto him likewise are as much as king of the sea, subiect the gouernments of Danfila and of Canfila, neere or Lord high admiral: vnto the borders of Egypt. Certaine yeeres past the great Turkes forces haue mightily afflicted this prouince, destroying the townes, and leading the people captiue: so that in the end Isaac the lorde Barnagasso was inforced to compound
with the Turkes lieutenant (bearing title, The Bassa of Abassia, and residing in Suachen) for the yeerely tribute of a thousand ounces of golde. Ouer and besides he paieth euery yeere vnto his soueraigne the Prete, an hundred and fiftie excellent horses, with cloth of silke and of cotton, and other matters.

On the most westerly part of Barnagasso, beginneth a mightie ridge of mountaines, which for a good space waxing narrower and narrower, at length in the kingdome Allpersons of of Angote dilateth it selfe into a rounde forme, enuironing the Abassin blood royal? en- with the steepe sides, and impassable tops thereof, many closed within a

ightie fruitefull and pleasant vallies, for the space of fiftene daies roundel of mountaines journey in compasse: within which vallies (as it were in Francis Alua-walled castles) all persons whatsoeuer, both male and rez, cap. 57, 59, 6., 6., female, of the Abassin bloud royall, are vnder paine of most extreme punishment, together with their whole families, limited to remaine. Within this great roundell or enclosure of mountaines, there is (among many others) contained one lesser, which is begirt arounde with a mountainous wall so craggie, steepe, and vnscaleable, that no man can come in or out, but onely by a certaine basket drawne vp and downe vpon a rope: neither is it possible to famish the parties within by a siege, be it neuer so long:

VDNESCRIBED BY IOHN LEO.

for they haue fruitefull ground, with houses, a church, a monasterie, cesternes of water, and all other necessaries for the continuall maintenance of flue hundred persons. Within this strong citadell of mountaines (for the auoiding of all tumults and seditions) are locked vp those great personages which come neerest in bloud to the Prete, and are in possiblitie of the crowne; and here must they all remaine. Tigremahon.

T Igremahon, a very large kingdome, lieth betweene the riuer Marabo, Nilus, the Red sea, and the kingdome of Angote. The gouernour heereof paieth for yeerely tribute vnto the Prete two hundred Arabian horses, a great quantitie of silke and cotton-cloth, and very much golde. Vnto this kingdome is subiect the prouince of Tigray, wherein standes the citie of Caxumo, sometimes the royall seate of the Queene of Saba (which they say was called Maqueda, of whom Salomon begat a sonne named Melich, before mentioned) which citie was the seate likewise of Queene Candace. Also to the said kingdome of Tigremahon belong the prouinces of Sabaim, Torrates, Balgada, and others.

Angote.

T His kingdome standing betweene the kingdomes of
Tigremahon and Amara, is full of mountaines and valleies, and aboundeth mightielie with all kinde of corne and cattell. The inhabitants eate but one meale in fower howres, and that alwaies in the night: their foode is most commonly rawe flesh, with a kinde of sauce made of an oxe gall. In stead of mon ley they vse salte, and little balles of iron, as is before saide. Vnto this kingdom do belong the prouinces of Abuguna, and Guanamora, with other regions and places.

A DESCRIPTION OF PLACES

The kingdome of Amara bordering north vpon Angote, east vpon Xoa, south vpon Damut, and extending west almost as farre as Nilus ; is for the most part a plaine region, without mountaines, very fertile, and abounding with cattell. Vpon the frontiers of this kingdom standeth the foresaide large, high, and craggie mountaine, wherein the sonnes, brethren, and kinsfolkes of the Prete are most warily kept, and from whence after his decease the heire apparant is brought, to be invested in the empire.

The kingdome of Xoa situate betweene the kingdomes of Amara, Damut, and Fatigar, containeth many deepe vallies, and aboundeth with all kinde of corne and cattell.

In the kingdome of Goiame are two mightie lakes, from which Nilus is saide to fetch his originall. Heere is exceeding plentie of golde vnrefined : the north part of this region is full of deserts and mountainous places.

Bagamidri one of the largest kingdomes in all the vpper Ethiopia, extendeth in length by the riuer Nilus, the space almost of six hundred miles: and in this kingdorrie are many most rich siluer-mines.

The kingdome of Fatigar lying betweene the kingdomes of Adel, and of Xoa, consisteth the greatest parte of champion groundes, which yeelde wheate, barly, and other graine most plentifully. In this kingdome standes an exceeding high mountaine, on the toppe whereof is a lake of twelue miles in compasse, abounding with great varietie of fish; and from this mountaine runne many riuers stored with fish also.

The kingdome of Damut (as Sanuttus affirmeth) doth border vpon the kingdome of Xoa, and is enclosed on either side with the lake of Barcena, and the lande of Zanguebar. Howbeit others place Damut betweene the kingdomes of Vangue and Goiame towarde the west, which opinion seemeth most probable. This countrey aboundeth with golde, ginger, grapes, corne, and beasts of all sortes. The slaues of this kingdome are much esteemed, and are commonly solde throughout all Arabia, Persia, and Egypt, where they prooue most valiant soldiers. The greater part of the people-of Damut are Gentiles, and the residue Christians, who haue certaine monasteries. In this kingdome is that exceeding high and dreadfull mountaine, Themountaine (hauing one narrow passage onely to ascend by) whither the of death. Prete sendeth his nobles which are conuicted of any heinous crime, to suffer ignominious death with hunger and cold. About the fountaines of
Nilus some say, that there are Amazones or women-warriers, most valiant and redoubted, Of these Amazones read more which use bowes and arrowes, and lie under the gouerne- in the discourse of AMonomotapa
moment of a Queene: as likewise the people called Cafri or following. Cafates, being as blacke as pitch, and of a mightie stature, and (as some thinke) descended of the lewes; but now they are idolators, and most deadly enemies to the Christians; for they make continual assaults upon the Abassins, dispoiling them both of life and goods: but all the day-time they lie lurking in mountaines, woods, and deepe vallies.
The stile used by Prete Ianni in his letters. This stile is taken out of a
I the king, whose name the lions do reverence, and who letter written by Dauid the by the grace of God was at my baptism called A thani Emperour of Tingil, that is, The incense of the virgine, but now at the AV4.ipia

A DESCRIPTION OF PLACES
beginning of my raigne, tooke upon me the name of Dauid; beloued of God, the pillar of faith, descended of the tribe of Zuda, the sonne of Dauid, the sonne of Salomon, the sonne of the pillar of Sion, the sonne of the seede of Jacob, the sonne of the hand of Marie, the sonne of Nahu according to the flesh, the sonne of the holy Apostles Peter and Paul according to grace, Emperour of the higher and greater AEthiopia, and of most large kingdoms, territories, and jurisdictions, the king of Xoa, Caffate, Fatigar, Angote, Barri, Baaliganze, Adea, Vague, and Goiam, where the fountaines of Nilus are; as likewise of Amara, Baguamedri; Ambea, Vague, Tigremahun, Sabaim the countrie of the Queen of Saba, of Barnagasso, and lorde as farre as Nubia, which confineth upon Egypt. Certaine answeres of Don Francisco 41uarez, (who from the yeere 1520, for the sPace of siTe yeeres next ensuing, had travailed and remained in the countrey of* PRETE IANNI with the Porugall ambassadour Rodrigo de Lima) made vnto sundrie demands or questions of the Archbishop of Braganfa, concerning the state of the foresaid countrey and prince, and of the disposition, manners, and customes of the people. lo. Bap. Ramusius, vol. i. delle voiagzol. 254. 255. "vz _ _He Ethiopian Emperour called Prete
fanni hath no setled place of abode where he continually resideth; but is alwaies flitting vp and downe, sometimes to one place, and sometimes to another, and liueth in tentes set vp in the fields, envirioned with a kinde of fortification; of which tents there may be in his campe of all sorts to the VNDESCRIBED BY IOHN LEO.
number of 5000. or 6000; and of horsemen and mules 50000. and vpwards.
It is a general custom of the Prete and of all his subjects not to pass on horseback by any church (so great is their reverence to holy places) but so soon as they approach thereunto, they light upon the ground, and having passed by, they mount on horseback again.

Whenever the Prete marcheth with all his troupes, there is carried before him upon the shoulders of certaine priests an altar and a consecrated stone, whereon they use to administer their communion: the priests appointed to carry it vpon a frame of wood, are eight in number, serving four and four by turns; before whom goeth a clerke with a censer and a little bell sounding; at the sight and noise whereof all persons forsake the way, and such as are on horseback, dismount.

In all this countrey there is not any towne consisting of above 1600. families, & there are very few that have so many: neither are there any castles or walled places; but very manie villages, and infinite numbers of people. Their houses are built round, al of earth, flat-roofed, and couered with a kind of thatch which will last the time of a mans life, being compassed about with courts or yards. They have no bridges, of stone vpon their riuers, but all of wood. They sleep commonly vpon oxe-hides, or else vpon certaine couches corded & sustained with thongs made of the said hides. They have no kind of tables to eat their meat vpon, but have serued it in vpon plaine & very broad platters of wood, without any table-cloth at al. Also they have certaine great deep dishes like basons made of black earth shining in manner of jet, with other cups of the same earth, out of which they use to drinke water & wine. Many of them eate raw flesh, but others broile it vpon the coles or firebrands: and some places there are so destitute of wood,

A DESCRIPTION OF PLACES
that the people are faine to dresse their meate with oxedung.
Their armour and weapons be Azagaie or short darts, some few swords, and certaine shirts of male verie long and streight, and (as some of our men which haue seene them doe report) made of naughtie and vnseruiceable matter. They have bowes and arrowes great store, but not with feathers as ours be: as likewise helmets and headpeeces, but very few, and first brought in since they began to haue traffique with the Portugals: howbeit they haue

*1526. manie strong targets. Of artillerie they had *at our departure foureteene small yron-peeces, which they had bought of certaine Turkes that vsually came to trafficke vpon the coast; for which peeces the Prete willed that they should haue their vttermost demanede, to the end they might be the willinger to returne and bring more; and he caused some of his seruants also to learne how to discharge them.

Philippo Piga- The riuers of Nilus, I my selfe neuer saw, although at one fetta will haue -Vi is to spring time I was within thirtie miles thereof: howbeit some of out of one great lake onely, our Portugales haue trauelled to the very fountaines of which is to the
south of Nilus, which are two great lakes comparable to seas, situate Goiame. in the kingdom of Goiame; out of which having conveyed it selfe a small distance, this river embraceth certaine Islets, and then holdeth on his course to Egypt. The true cause The reason why Nilus yeerely overfloweth Egypt, is, of the increase of Nius, because the generall winter of Ethiopia holding on with most mightie and continual raines from the middle of Iune to the midst of September, doth make the said river so exceedingly to swell, that the waters thereof couer al the plaine countrie of Egypt.

In all the foresaid dominions of the Prete, they use not to write one to another, neither do the officers of justice commit any of their affaires to writing, but all matters are dispatched by messengers and by wordes of mouth: onely

UNDESCRIBED BY IOHN LEO.

it was told me, that the revenues and tributes of the Prete, are put downe in writing both vpon the receite, and at the disbursement. The emperour Prete Ianni hath two speciall princely names, to wit, Acegue, which signifieth an emperour, and Neguz, a king. The Patriarke or arche-prelate of all Abassia is called Abuna, that is to say, Father; neither is there any in all the whole empire which ordaineth ministers, but onely hee. There is no wine of the grape made publiquely in any place, but onelie in the houses of the Prete and of the Patriarke; for if it be made anie other where, it is done by stealth. The wine which is vsed in their communions, they make of raisins steeped ten daies in water, and afterward streined in a wine-presse; and it is a most cordiall, delicate, and strong wine. In this countrie is a great abundance of golde, siluer, copper, and tinne, but the people are ignorant how to worke it out of the mines: neither haue they any coine of golde or siluer, but all their bargaines are made by bartering of one commoditie for another. Also they trucke little pieces of gold, some weighing a dram, and some an ounce. But salt is the principall thing which runneth currant for money throughout all the emperours dominions. Some places there are which yeeld wheat and barly, and others millet in great plentie; and where the saide graines are not reaped, there groweth Tafo da guza, a seede utterly vnknowne in these parts, as likewise lentiles, beanes, pease, fitches, and all kinde of pulse in abundance. Heere are infinite store of sugar canes, which they know neither how to boile nor refine, but eate it rawe. There be great plentie of faire grapes and peaches, which are ripe in the moneths of Februarie and Aprill. Of

A DESCRIPTION OF PLACES
Oyle strayned out of an kerbe.

Oreneges, limons, and citrons, the quantitie is innumerable; for they growe most naturally out of the Abassin soile: garden-herbes there are but fewe, because the people delight neither to set nor sowe them.

All the whole countrey is full of Basill, which groweth very tall both in the woods and vpon the mountaines: so are there likewise other odoriferous herbes of diuers sorts, but vnknown vnto vs. Of trees common with vs I remember none other kinds growing there, but onely Cypresses, damsin-trees, sallowes by the waters side, and trees of Iuiubas.

Honie there is exceeding great plentie all the countrey ouer: neither are their bee-hiues placed abroad in the open aire as ours are: but they set them in chambers, where making a little hole in the wall, the bees go thicke in and out, and come home laden with honie. Wherefore there is great quantitie gathered in all the empire, but especially in the monasteries, where they make it a great part of their sustenance. There are founde also swarmes of bees in the woods and vpon the mountaines, neere whom they place certaine hollowe boxes made of barke, which being filled with honicombes, they take vp, and carrie home to their houses.

They gather much waxe, whereof they make their candles, because they haue no vse of tallow.

They haue no oyle of oliues, but of another kinde which they call Hena: and the hearbe whereout they straine it, is like a little vine-leaf: neither hath this oyle any smell at all, but in colour it is as beautifull as gold.

Heere likewise they haue store of flax, but they know not how to make cloth thereof.

Here is also great plenty of cotton, whereof they make cloth of diuers colours.

One countrie there is so extremely colde, that the

WNDESCRIBED BY IOHN LEO.

people are inforced to clad themselues in very course cloth of a darke tawnie.

Concerning phisicke, and the cure of diseases, they know very little or nothing; but for aches in any partes of their bodies the onely remedy which they use is to apply cupping-glasses; and for head-aches they let the great vaine of the temples bloud.

Howbeit they haue certaine herbes, the iuice whereof being drunke, serueth them in steede of a purgation.

There would in this countrie be gathered infinite store of fruit, and far greater quantitie of corne, were not the poore commons most miserablie oppressed by their superiours, who extorte all their substance from them; so that they neuer till nor plant any more, then they must of meeere necessitie.

In no place wheresoeuer I travelled, could I see any shambles of flesh, but onely at the court of the Prete: for in other places no man may kill an oxe, though it bee his owne, without licence from the gouernour of the countrie.

As touching their ordinary proceeding in iustice, they use not to put any to sudden death, but beate them with bastinados according to the quality of the offence, and likewise they plucke out their eyes, and cut off their handes and feete: howbeit during mine abode there I saw one burnt for robbing of a church.
The common sort speake truth very seldome, though it bee vpon an oathe, vnlesse they be forced to sweare By the head of the King. They feare exceedingly to be excommunicated; so that being enioned any thing that tendeth to their prejudice, if they do it all, it is done for feare of excommunication.

Their depositions or othes are performed in this manner. The partie to be deposed goeth accompanied by two priests, carrying with them fire and incense to the church-

Their manner of justice.
Their maner of swearing.

A DESCRIPTION OF PLACES
door, whereon he layeth his hande; and then the said priests adiure him to tell the truth, saying: If thou sweare falsly, as the lyon deoureth the beasts of the forest, so let the diuell deuoure thy soule; and as come is ground vnder the mill-stone, so let him grinde thy bones; and finally, as the fire burneth vp the wood, so may thy soule burne in the fire of hell: and the partie sworne, answereth to euery of the former clauses, Amen. But if thou speake truth, let thy life be prolonged with honour, and thy soule enter into Paradise with the blessed: and he againe answereth, Amen.

Which being done, hee giueth testimonie of the matter in question.

7The ceremonies No person may sit in their churches, nor enter into them

Churches. with his shooses on, nor spit within them, neither may any
dogge or any other creature voide of reason come within them. They confesse themselues standing vpon their feete, and so standing likewise, receiue absolution. They say their forme of publike praier after one and the same manner, both in the churches of their Canons, and of their friers: which friers haue no wiues; but the Canons and priests are permitted to haue. Where the Canons Hue togither, they go each man to diet at his owne house; but the friers eate their meate in common.

Their ecclesiasticall gouernours are called Licanati.
The sonnes of the Canons are, as it were by inheritance, Canons; but priests sonnes haue no such priuilege, vnlesse they be ordained by the Abuna. They pay no tithes to any churches, but the clergie are maintained by great possessions belonging to their churches and monasteries.

Also when any priest is cited, he is conuented before a secular iudge.

Whereas I saide, they sit not in their churches, it is to
bee vnderstoode, that alwaies without the church doore stande a great number of woolden crutches, such as lame men vse to go upon; where euyer man taketh his

UNDESCRIBED BY IOHN LEO.
owne, and leaneth thereupon all the time of their diuine servuce.
All their books (which they haue in great numbers) are written in parchment, for paper they haue none; and the language wherein they are written named Tigia, is
all one with the Abassin language: but so it was called from the name of the first
towne in all that empire, which was converted to the Christian religion.
All their churches have two curtaines, one about their great altar, with belles,
within which curtaine none may enter but onely priests: also they have another
curtaine stretching through the midst of their church, and within that may no man
come, but such as haue taken holy orders: insomuch that many gentlemen and
honorable persons take orders vpon them, onely that they may haue accessse into
their churches.
The greater part of their monasteries are built vpon high mountaines, or in some
deepe valley: they haue great revenues and iurisdictions; and in many of them
they eate no flesh all the yeere long. Neither do they spende any store of fish,
bicause they know not how to take it.
Vpon the wals of all their churches are painted the pictures of Christ, of the
blessed virgine Marie, of the apostles, prophets and angels, and in euery one the
picture of Saint George a horseback. They haue no Roodes, neither will they
suffer Christ crucified to be painted, because they say, they are not woorthy to
behold him in that passion. All their priests, friers, and noblemen continually
carrie crosses in their hands; but the meaner sort of people carrie them about their
neckes.
Their moueable feasts, namely Easter, the feast of Ascension and Whitson tide,
they obserue at the verie same daies and times that we do. Likewise as concerning
the feasts of Christmas, the Circumcision, the Epiphanie, and
D

A DESCRIPTION OF PLACES
other the feasts of the saints, they agree whollie with vs,
though in some other things they varie.
They haue great store of leprous persons, who are
not put apart from the rest of the people, but liue in company with them: and
many there are who for charitie and deuotions sake do wash them, and heale their
wounds.
Their musicall They haue a kinde of trumpets, but not of the best, instruments.
and likewise certaine drums of brasse which are brought from Cairo, and of
woode also couered with leather at both endes, and cimbals like vnto ours, and
certaine great basons whereon they make a noise. There are flutes in like sort, and
a kinde of square instruments with strings, not much vnlike to an harpe, which
they call Dauid Mozan, that is to say, the harpe of Dauid; and with these harpes
they sonde before the Prete, but somewhat rudely.
Their horses of the countrey-breed are in number infinite,
but such small hackney-iades, that they doe them little seruice: howbeit those that
are brought out of Arabia and Egypt are most excellent and beautifull horses: and
the great horse-masters also in Abassia haue certaine breeds or races of them,
which being new foled, they suffer not to sucke the damme aboue three daies, if
they be such as they meane to backe betimes: but separating them from their
dammes, they suckle them with kine, and by that means they prooue most sightly and gallant horses. Hitherto
Aluarez.
Thus much (I hope) may suffice to haue bin spoken concerning the vpper or Inner Ethiopia which containeth the empire of Prete Ianni: now sithens we are so far proceeded, let vs take also a cursory and briefe surueie of the lower or extreme Ethiopia, extending it selfe in forme of a speares point, or a wedge, as far as thirtie flue degrees of southerly latitude.

VNDESCRIBED BY IOHN LEO.
Of the lower or extreme Ethiopia.
This parte of Africa being wtterly vnknowne to Ptolemey and all the ancient writers, but in these later times, thoroughly discovered by the Portugales, especially along the coast, beginneth to the Northwest about the great riever of Zaire, not far from the Equinoctial: from whence stretching southward to thirtie flue degrees, and then Northward along the sea-coast on the backside of Africa, as far as the very mouth or enterance of the Arabian gulfe, it limiteth the south and east frontiers of the Abassin Empire last before described.
In this part also are many particulars very memorable, as namely besides sundry great empires and kingdoms, The famous mountaines of the moon, the mightie rieurs of Magnice, Cuama, and Coauo, springing out of the lake Zembre, the renowned cape of good hope, and other matters whereof we will intreate in their due places.
This portion of Africa is divided into sixe principall partes, namely: The land of Aian, the land of Zanguebar, the empire of Mohenemugi, the empire of Monomotapa, the region of Cafraria, & the kingdom of Congo.
A ian the first general part of Ethiopia the lower.
This land of Aian is accounted by the Arabians to be that region which lyeth betweene the narrow entrance into the Red sea, and the riever of Quilimanci; The riever of Quilimanci in being vpon the sea-coast for the most part inhabited by the nine degrees of northerly latisaid Arabians: but the inland partes thereof are peopled tude. with a black nation which are Idolaters. It comprehendeth two kingdoms; Adel and Adea.
Adel is a very large kingdom, and extendeth from the Adel t efist generall part mouth of the Arabian gulfe to the cape of Guardafu called of Aian. of olde by Ptolemy Aromata promontorium. South and D 2

west it bordereth vpon the dominions of Prete Ianni, about the kingdom of Fatigar. The king of this countrie being a Moore, is accounted amongst the Mahumetans a most holy man, and very much reuerenced by them, because he
wageth continuall war with the Christians, taking captiue many of the Abassins, and
sending them to the great Turke, and the princes of Arabia, of whom he receiueth greate ayde for the maintenance of his warres, both of horse and foote. The people of Adel are of the colour of an oliue, being very warlike, notwithstanding that the greatest part of them want weapons. Their principall city is called *Anar, as some are of opinion. Vnto this kingdome is subiect the citie of Zeila inhabited by Moores, situate on a sandie and low soile, which some suppose to be built in the very same place, without the enterance of the Red sea, where Ptoloney placed the ancient mart-towne of Aualites. This citie is a place of great traffike; for hither they bring out of India, cloth, elephants teeth, frankincense, pepper, golde, and other rich merchandize. The territorie adjoining yeeldeth abundance of honie, waxe, and a great quantitie of oile, which they make not of oliues, but of a kinde of daintie plumes: it affourdeth likewise such plentie of corne, of cattell, and of fruits differing from ours, that they are transported by shipping to other nations. Barbora likewise, a citie of the Moores, standeth in this kingdome of Adel, and hath a commodious hauen, whereunto resort many ships laden with merchandize, from Aden in Arabia, and from Cambaya upon the riuer of Indus. The citizens are blacke people, and their wealth consisteth most of all in flesh.

In the yeere 1541, Gradaameth the king of this place, after manie mischiefes which he had done to Cladius the emperour of Abassia, being vanquished by Christopher de Gama, the Indian Viceroy of John the third king of Portugale; bee did by meanes of the souldiers and warlike

UNDESCRIBED BY IOHN LEO.
prouisions, which were sent him from the Sheque or gouernour of Zebit, ouercome the Portugals & the Abassins. Howbeit afterward hauing sent the said forces backe againe to Zebit, himselfe was slaine, and his whole armie ouerthrowne by king Claudius aforesaide. But certaine yeeres after, the successour of Gradamaeth hauing in a warlike encounter subdued the Prete, rode in triumph vpon a little asse; signifying thereby, that he ascribed not the victorie to his owne forces, but to the power of God.

Adea, the second kingdome of the land of Aian, situate Ade, the second part of vpon the easterne Ocean, is confined northward by the Aian. kingdome of Adel, & westward by the Abassin empire. It is exceeding fruitful, & one part thereof mightily aboundeth with woods, the residue being sufficiently stored with cattell & corne. The inhabitants being Moores by religion, and paying tribute to the emperour of Abassia, are (as they of Adel before-named) originally descended of the Arabians: who many hundred yeeres agoe, partly by their rich traffike, and especially by force of armes, became lords not onely of Aian, but of all the sea-coast along as farre as Cabo de los corrientes, standing in the southerly latitude of fourer and twentie degrees. In all which space the cities standing vpon the sea-coast; before the Portugals discouered the east Indies, lay open and vnfortified to the sea (because the Arabians themselues were absolute lords thereof) but were strongly walled toward the lande, for feare of the Cafri, or lawlesse wilde Negros, who were deadly enemies to the Arabians, and vttterly misliked their so neere
neighbourhood. Howbeit since the Portugals taking of Magadazo, and divers other townes vpon the coast, they haue applied themselves very much to fortification. But, to returne to the matter where we left, vnto the foresaid kingdom of Adea belongeth the king. The kingdom and citie of dome of Magadazo, so called of the principall citie therein, Magadazo, which is a most strong, beautifull, and rich place, and is

A DESCRIPTION OF PLACES
subject to the kingly gouvernment of a Moore. The territorie adjacent is exceeding fruitfull, abounding with sheepe, kine, horses, wheate, barley, and other kindes of graine. It hath also an excellent hauen, and much frequented by the ships of Aden and Cambaya, which come thither laden with sundrie kindes of cloth, with spices and other merchandize; and from hence they carrye elephants teeth, golde, slaues, honie, and waxe. The inhabitants are of an olie-colour, and some of them blacke, like vnto the nations adioining, and they go naked from the girdle-stead vpward, and speak the Arabian tong. They are but meanely weaponed, which causeth them to shoote poisoned arrowes. This citie was in times past head of all the townes and cities of the Moores standing along this coast for a great distance. Zanguebar or Zanzibar, the second generall part of the lower Ethiopia. Z Anzibar or Zanguebar, so called by the Arabians and Persians, is that tract of lande, which runneth along some parte of the dominions of Prete fanni, and from thence extendeth it selfe by the east of Mohenemugi, til it ioyneth with the frontiers of Monomotapa. Howbeit some there are who vnder the name of Zanzibar will haue all the south part of Africa to be understood, euen as far as Cabo Negro, which stretcheth into the western Ocean about 18. degrees of southerly latitude: so that they comprehend therein the empires of Mohenemugi and Monomotapa, and all the land of Cafraria. But in this controversie wee rather chuse to follow the opinion of Sanutus, affirming with him, that the said maritime tract of Zanguebar (as it is by vs before limited) is a lowe, fennie, and woodie countrie, with many greate and small riuers running through it: which extremity of moisture in those hot climates

VDNECDRTBED BY IOHN LEO.
causeth the ayer to be most vnholesome and pestilent. The inhabitants are for the most part black, with curled haire, being Idolaters, and much addicted to sorcery and witchcraft. They go naked all the vpper part of their bodies, covering their nether partes with clothes of diuers colours, and with beasts skins. And this fract of lande stretching along the sea-coast from the riuier Quilimanci to the riuier of Magnice containeth the kingdomes and territories of Melinde, Mombaza, Quiloa, Mozambique, Sofala, and others. Melinde, the most Northerly kingdome of Zanguebar, Meinde tht, ist part of situate in two degrees and an halfe of southerly latitude, Zanguear: and stretching from the coast vp into the main for the space of an hundred miles, hath a strong and stately city of the same name, being seuentie miles distant from Mombaza. It aboundeth with Rice, Millet, flesh, limons, citrons, and all kinds of fruittes: but as for corne, it is brought hither out of Cambaya. The inhabitants (especially on the
sea coast) are Moores and Mahumetans: who build their houses very sumptuously after the manner of Europe. They are of a colour inclining to white, and some blacke people they haue also among them, which are for the greatest part Idolaters: howbeit all of them pretend a kinde of ciuilitie both in their apparell, and in the decencie and furniture of their houses. The women are white, and sumptuously attired after the Arabian fashion with cloth of silke. Likewise they adorn their neckes, armes, hands, and feete with bracelets and Jewels of golde and siluer. When they go abroad out of their houses, they couer themselues with a vaile of taffata, so that they are not knowne but when they themselues lift. Vpon this coast of Melinde you haue a very safe harborage, wherunto the ships that saile those seas do vsually resort. In briefe the inhabitants are a kind, true-harted, & trustie people, & courteous to strangers. They haue alwaies beene in league

M'ombaza the second portion of Zangueba.
Quiloa the third part of Zangutbar.

with the Portugals, giuing them most friendly entertainmt, & reposing much c~fidence in them; neither haue they euer done them any injury.
The kingdome of Momba~a, being the second generall part of Zanguebar, and situate in three degrees and a halfe beyond the Equinoctiall line, bordering to the north vpon Melinde, and to the south vpon Quiloa; is so called after the name of a certaine isle and citie vpon the coast, both which are named Momba~a, and are peopled with Mahumetans: their houses are of many stories high, and beautified with pictures both grauen and painted. Their kings are Mahumetans, and most deadly enimies to the Christians: one of the which taking vpon him to resist the Portugals, was himselfe quite vanquished and ouerthrown, and constrained to leau his citie to the sacke and spoile of his enimies, who found there in a good quantitie of gold, siluer, and pearle; and likewise cloth of cotton, of silke, and of gold, with great numbers of slaues, & such other commodities. Howbeit they remained not there any long time, but were inforced to abandon the place in regard of the most vnholesome and infectious aire. This kingdome is tributarie to the great empire of Mohenemugi.
The kingdome of Quiloa situate in nine degrees towarde the pole Antarticke, and (like the last before mentioned) taking the denomination thereof from a certaine isle and citie both called by the name of Quiloa; may be accounted for the third portion of the lande of Zanguebar. This island hath a very fresh and coole aire, and is replenished with trees alwaies greene, and with plentie of all kinde of victuals. It is situate at the mouth of the great riuer Coaou which springeth out of the same lake from whence Nilus floweth, and is called also by some Quiloa, and by others Tahiua, and runneth from the saide lake, eastward for the space of sixe hundred miles, till it approcheth neere the sea, where the streame thereof is so forcible, that at

VNDESCRIBED BY IOtIN LEO.
the very mouth or out-let, dispersing it selfe into two branches, it shapeth out a great island, to the west whereof vpon the coast you may behold the little isle and
the citie of Quiloa, being separated from the maine by a very narrow arme of the sea. This isle (as also the great isle before named) is inhabited by Mahumetans, who are of colour whitish. Their women are comely, and rich in their attire. Their houses are fairely builte of lime and stone, and haue within them very gallant and costly furniture, and without they are environed with gardens and orchards full of sundry delicate fruits and herbes. Of this island the whole kingdome (as is aforesaide) tooke the name; which vpon the coast extendeth it selfe to Cabo Delgado, or the slender Cape (being the limite betweene Moqambique and this kingdome of Quiloa) & from thence it stretcheth vnto the foresaid riuer of Coauo. In old time this kingdome of Quiloa was the chiefest of all the principalities there adjoineing; for the Arabians which were masters thereof had enlarged their dominions for the space of nine hundred miles, so that all the sea-coast and the islands, as farre as Cabo de los Corrientes situate in fower and twentie degrees of southerly latitude, were tributarie and subject thereunto. Whereupon when the Portugals arriued in those countries the king of this place trusted so much to himselfe, that he thought he was able with his owne forces, not onely to make a defensiue warre against them, but also to driue them from those places, which they had already surprized. Howbeit, quite contrarie to his expectation, he was by the Portugals vtterly vanquished and put to flight. Who seazing vpon the isle and citie, enriched themselues with the great booties & spoiles that they found therein. Thus the mighty king of Quiloa (who before the Portugals arriuall in those parts, enioied also the chiefe commoditie of the rich gold mines of Sofala) became at length, by a composition made with Don Pedro Cabral, tributarie to the crowne

A DESCRIPTION OF PLACES
of Portugall, paying for tribute at the first flue hundred, and afterward fifteene hundred peeces of gold. Vpon the foresaid isle the Portugals erected a forteresse, which their king afterward commanded them to deface, considering that there were other forts sufficient enough for that coast. Mozambique  Betweene the two mightie riuers of Coauo and Cuama the fourth part of Zanuebar. (both which spring out of one lake with Nilus) among the kingdomes of Mombara, Mozimba, Maeuas, and Embeoe, which are not as yet perfectly discouered, lieth the kingdome of Mozambique, so called of three small islets, situate OrMoghin in the mouth of the riuer *Meghincate in fowerteene and a cats.

halfe, or fifteene degrees of southerly latitude, which kingdome in ancient time by Ptolemy was called Promontorium Prassium. In the principall of the three foresaide isles, there is a very commodious and secure hauen, capable of all kinde of vessels, and there also the Portugals haue built a very strong forte: where albeit in regard of the lownes and moisture of the soile, being full of bogges and fens, the aire be most vnholysome, and in manner pestilent: yet the opportunitie of the place, and the plentie of victuals, haue made it one of the most famous and frequented haunes in all that Ocean. For which cause the fleetes which saile from Portugall to the east Indies, when they are out of hope to performe their voyiage in summer, do vsually resort to spend the whole winter at Mozambique: and those Portugale ships also which come from the Indies toward Europe, must of
necessitie touch at this place, to furnish themselues with victuals. Along these coasts do saile certaine Moores in vessels sowed or fastened together with thongs of lether, the sailes whereof they make of Palme-leaues, and in stead of pitch and tallow, they calke them with gumme which they gather in the woods. Vnto this kingdome of Moqambique belongeth Angoscia, the province of Angoscia, so called from certaine isles of that name, lying directly ouer against it, which province

VNDESCRIBED BY IOHN LEO.

stretcheth to the riever of Cuama. It is inhabited by Mahumetans and Gentiles, who are for the greatest part merchants, and do trafficke along that coast with the same wares and commodities wherewith the people of Sofala do trade. Sofala, or Sefala, the first and last general part of Sofala the first part of ZanZanguebar, is a small kingdome lying vpon the sea-co ast, guebar. between the rievers of Cuama and Magnice, being so called after the name of a riever running through it, in which riever lyeth an Island, which is the head and principal place of the whole countrie. On this Island the Portugales haue built a most strong forte, by meanes whereof they are become Lordes of the richest trade in all those parts. For (to say nothing of the Juorie, Amber, and slaues vvhich are hither brough) all the gold in a manner that is taken out of those manifolde and endless mines of Sofala and all the Inland-countries thereabouts, is here exchanged vnto the Portugales for cotton-cloth, silkes, and other commodities of Cambia: all which is thought yeereely to amount vnto the summe of two millions of gold. This golden trade was first in the power of the Moores of Magadazo; and afterward it befell to them of Quiloa. The inhabitants of Sofala are Mahumetans, being gouerned by a king of the same sect, who yeeldeth obedience to the crowne of Portugale, because hee will not be subiect to the empire of Monomotapa. Neither is it heere to bee omitted, that in these parts vnder the name of luorie, are bartered not onely elephants teeth, but also the teeth of sea-horses: which creatures are commonly found in the rievers of Nilus, Niger, Coauo, Cuama, Magnice, and all other the great rievers of Africa.

A DESCRIPTION OF PLACES

The empire of Mohenemugi,32 the third generall part of the lower Ethiopia. T His mightie empire bordering south vpon the kingdome of Mozambique, and the empire of Monomotapa; to the riever Coauo, and beyond; west with the riever Nilus; North vpon the dominions of Prete anni; and east vpon the kingdoms of Melinde, Momba-a, and Quiloa, hath not many yeeres ago bin discovered or at least heard of by the Portugales, vpon occasion perhaps of the warres, which with vnfortunate successe they haue waged against Monomotapa. The emperour of this country holdeth a continuall league with the princes of Melinde, Momba-a, and Quiloa, towards the sea, for traffiques sake: for they prouide his dominions with cloth of cotton, cloth of silke,33 and sundrie other commodities brought from Arabia, Persia, Cambaya, and India, which are very well esteemed in those parts: but among the rest they bring especially certaine little balles, of a red colour, and in
substance like unto glasse, being made in Cambaya of a kinde of Bitumen or clammie claire, which balles they vs e to weare like beades about their necks. They serve also to them in stead of money, for gold they make none account of. Likewise with the silkes that are brought vnto them they apparel themselves from the girdle downward. In exchange for all the foresaid wares and commodities they giue gold, siluer, copper, and iuorie. Howbeit vp his Inland frontiers to the south and southwest, he maintaineth continually all and bloudie warres against the emperour of Monomotapa, his principall and greatest forces consisting of a most barbarous and fierce nation, called by the people of Congo Giachi, but by themselues Agag, who inhabite from the first great lake which is the fountaine of Nilus, for a certaine space vpon

VNDSCRIBED BY IOHN LEO.

both sides of the said riuer, and then afterward on the westerne banke as farre as the second great lake from whence Zaire hath his chiefe original, & thence euen to the confines of Prete ianni. They are a wilde and lawles people, liuing (after the manner of the ancient Scythians and Nomades, and like the Tartars and Baduin-Arabians of these times) a vagrant kind of life, vnder cabbins and cottages in the open forests. They are of stature tall, and of countenance most terrible, making lines vpon their cheeckes with certaine iron-instruments, and turning their eie-lids backward, whereby they cast vpon their enemies a most dreadfull and astonishing aspect. They are maneaters, and couragious in battaile. For their armour of defence they use certaine Pauises or great targets wherewith they couer their whole bodies, being otherwise naked: and their offensiue weapons are darts and daggers. It is not many yeeres since these cruel sauvages ranging westward from Nilus, invaded the kingdome of Congo, vanquished the inhabitants in sundrie battels, tooke the head citie, and forced the king Don Aluaro to flee for succour and safetie vnto the isle of horses, in the mouth of the great riuer Zaire, being one of the extreme frontiers of his dominions. Where the king himselfe was taken with an incurable dropsie, and his people in great numbers died of famine; who to relieue their extreme necessities, sold their wiues, their children, and their owne selues for slaves vnto the Portugals. Howbeit these warlike Giacchi, notwithstanding their hautie courage, and great exploits, are no whit feared, but rather most boldly encountered, and sometimes vanquished by the Amazones or women warriers of Monomotapa. Which two nations, what by warlike stratagems, and what by open and maine force, do often fight the most desperate and doubtfull battailes, that are performed in all those southern parts.

A DESCRIPTION OF PLACES

The empire of Monomotapa, the fourth generalpart of the lower Ethiopia. B Enomotapa, Benomotaxa, or Monomotapa is a large empire,34 so called after the name of the prince thereof, who in religion is a Gentile, and for extension of dominions, and military forces, a renowned and mightie emperour; in the language of whose subjectes an emperour is signified by this word Monomotapa. This empire of his lyeth, as it were, in an Island which containeth in compassse seuen hundred and fiftie, or (as
some think one thousand leagues, being limited on the north-west by the great
lake whereout Nilus springeth; on the south, by the ruer Magnice and the
tributarie kingdome of Butua or Toroa; on the east it hath the sea-coast and the
kingdome of Sofala, which in very deed is a member thereof; and the North part
abutteth vpon the ruer of Cuama, and the Some will hte empire of Mohenemugi.
That part of this great Island Mlagnice and

to sit before him, is all one, as with vs for a man to stand mentioned by vpon his
feete, neither may any presume to stand in his Ptoleney.3.5 presence, but onely
great lords. He is tasted vnto, not before, but after he hath eaten and drunke. For
his armes he hath a spade and two darters. Tribute he taketh none, but onely
certaine daies seruice and giftes presented vnto him ; without which there is no
appearing in his sight. Hee carrieth, withersoever he go, foure hundred dogs, as a
most sure and trustie guard. Hee keepeth all the heires of his tributarie princes, as
vassals, and as pledges of their fathers loialtie. There are no prisons in al his
empire: for sufficient testimonie being brought of the commission of any crime,
ijustice is executed out of hand : and of all offences none are punished with greater
seueritie and rigour, then witchcraft, theft, and adulterie. His people are of a
meane stature, blacke, and well proportioned. They are Gentiles in religion, hauing no idols, but worshipping one onely God whom they call Mozimo.6 They go apparelled in cloth of cotton, either made by themselues, or brought from other countries: howbeit the king will in no case weare any forrein cloth for feare of poison or such like trecherie: and the meaner sort of his subiects are clad in beasts skins. Among all the armies and legions of soldiers, which this emperour (for the defence of his great estate) is forced to maintaine, his Amazones are women warriers before mentioned are the most valiante, being indeed the very sinewes and chiefe strength of all his

A DESCRIPTION OF PLACES

militarie forces. These women, after the manner of the ancient Scythish or Asiatische Amazones, so much spoken of in histories of former times, seare off their left paps, that they might not be an hinderance vnto them in their shooting. They are most expert in warlike stratagems, and swift of foote. Their weapons are bowes and arrowes. At certaine times for generations sake they accompany with men; sending the male children home to their fathers, but keeping their daughters vnto themselves. They inhabite towards the west, not farre from the beginning of Nilus, in certaine places which themselues make choise of, and which are granted vnto them by the fauour of the Emperour. This empire of Monomotapa comprehendeth not onely the foresaid great island, but stretcheth it selue farther also toward the cape of Buena esperanza, as farre as the kingdomes of Butua or Toroa,37 which being gouerned by particular lords, do acknowledge Monomotapa for their soueraigne. Throughout all this emperours dominions is found infinite quantitie of gold, in the earth, in the rockes, and in the riuers. The gold-mines of this countrey neerest vnto Sofala are those of Manica, vpon a plaine enuironed with mountaines; and those also in the prouince of Matuca, which is inhabited by the people called Battonghi, and situate betweene the Equinoctiall line and the Tropique of Capricorne. These mines are distant from Sofala, betweene the space of 3oo. and sixe hundred miles: but those of the Boro and Quiticui are fiftene hundred miles distant towards the west. Others there are also in the kingdomes of Toroa or Butua: so that from hence or from Sofala, or from some other part of Monomotapa, some are of opinion, that Salomons gold for the adorning of the temple at Ierusalem, was brought by sea. A thing in truth not very vnilke: for here in Toroa, and in diuers places of Monomotapa are till this day remaining manie huge and

UNDSCRIBED BY IOHN LEO.

ancient buildings of timber, lime and stone, being of singular workemanship, the like whereof are not to be found in all the prouinces thereabouts. Heere is also a mightie wall of flue and twentie spannes thicke, which the people ascribe to the workemanship of the diuell, being accounted from Sofala flue hundred and ten miles the neerest way.38 All other houses throughout this empire (as is aforesaid) consist of timber, claie, and thatch. And heere I may boldly affirme, that the ancient buildings of this part of Africa, & along the coast of the east Indies, may
not onely be compared, but euen preferred before the buildings of Europe. The authors of which ancient monuments are unknown: but the later African buildings have been erected by the Arabians. In the time of Sebastian king of Portugal, the emperor of Monomotapa and many of his nobles were baptised: howbeit afterward being seduced by certaine Moores, he put Gonsaluo Silua to death, who converted him to the Christian religion. Whereupon Sebastian king of Portugall sent against him an armie of sixteene thousand,* consisting for the most part of gentlemen and men of qualitie, under the conduct of downe too great Francisco Barretto. The Monomotapa being afraid of a number, the Portugall forces, offered Barretto as good and acceptable conditions of peace as might be desired: but he not contented with reason, was quite overthrowne, not by his enemies, but by the vnwholesome aire of Ethiopia, and by the manifold diseases which consumed his people.

Cafferaria the fift general part of the lower Ethiopia.

C Africa, or the land of the Caffer, we esteem to be both the coasts and inlands of the extreme southerly point of Africa, beginning from the river Magnice, and thence extending by Cabo da pescaria, Terra do Natal, Bahia da lagoa, Bahia fermosa, about the cape

A DESCRIPTION OF PLACES

of Buena espeiran~a, by the bay called Agoada Saldanha, and thence Northward along the westerne coast of Africa, as far as Cabo Negro, or the blacke cape, which is situate verie neere vnto eightene degrees of Southerly latitude. The saide Cape of Buena esperan~a is devided into three smaller headlands or capes; The westermost, being called Cabo de buena esperanQa, or The cape of good hope after the name of the whole promontorie, and being cut from the rest of the firme land: The middlemost is named Cabo falso, because the Portugales in their voyaige homewards from the east Indies, haue sometimes mistaken this for the true cape beforementioned; betweene which two capes runneth into the sea a mightie river called by the Portugales Rio dolce40 (where their caraks often take in fresh water) and by the naturall inhabitants Camissa, which springeth out of a small lake called Gale, situate among The mountaines of the moon so much celebrated by ancient geographers: The third and eastermost cape stretching farthest into the sea, is called Cabo das Agulhas, or the cape of Needles, because there the needles of dialles touched with the loadstone, stand directly North, without any variation either to the east or to the west: betweene this cape and the foresaid westermost cape (which ly forth into the sea like two hornes) is the bredth of this mightie promontorie, containing about flue and twentie leagues; the length whereof from the riuer of Fernando Poo, where it beginneth to puttie forth into the sea, along the westerne coast southward, to the cape das Agulhas, amounteth to two thousand and two hundred Italian miles; and from Cabo das Agulhas, along the easterne shore northward, to Cape Guardafu, are three thousand three hundred of the same miles. This cape at the first discouerie thereof was called by Nauigators, The Lyon of the sea; & Cabo tormentoso, or The tepestuous cape; not so much, as I take it, for the dangerous and stormie seas more about
This cape than any other; but partly in regard of the chargeable, dangerous, and long travels of the Portugals before they could attaine vnto it; and partly bycause of the great compasse which in their voyages outward they are constrained to fetch for the doubling thereof; and partly also in regard of some tempestuous and stormie weather wherewith they haue beene encountered at this Cape; which notwithstanding at certaine times is an ordinarie matter vpon all shores and promontories ouer the face of the whole earth. And albeit some will not come within sight of this cape, but keepe a great distance off, for feare of the dangerous seas beating thereupon (as namely Francis de Almeida who sailed aboue an hundred leagues to the south, in fortie degrees of latitude; Pedro de Agnaia in fortie flue; and Vasco Carualbo in fortie seuen, where in the moneth of July eight of his men died for cold) yet we find by the late and moderne experience of sir Francis Drake, master Candish, master Lancaster in his returne from the east Indies, and of the Hollanders in their nauigations thither, begun in the yeere 1595, that those seas are at sometimes not onely free from stormie tempests, but most pleasant also to saile vpon, with faire and gentle weather. And as the Spaniards for a long time (that they might discourage all other nations from attempting nauigation vpon The south sea beyond America) blinded all Christendome with a report, that the streights of Magellan were unrepasable: so perhaps the Portugals, to terrifie all others from sailing to the east Indies, and to keepe the gaine and secrets of that rich trade entire vnto themselues, haue in their writings and relations made the doubling of the cape of Buena Esperan~a, and the crossing ouer those seas, a matter of farre greater difficultie and danger, then it is of late manifestly found to be. The name of Buena esperanqa or good hope, was giuen vnto this promontory by John E2

A DESCRIPTION OF PLACES
the second king of Portugall; bicause that when his fleetes had once doubled this cape, either outward or homeward, they then stedfastly hoped in good time to performe the residue of their voyaige; otherwise not. In the midst of this cape lieth a plot of ground of that beautie and delight, as that without any humane industrie it may compare with the most artificiall gardens of Europe. On the top of this place, nature minding as it were to excell her-selfe, hath framed a great plaine, which for beautifull situation, fruitfulnes of herbes, varietie of flowers, and flourishing verdure of things, seemeth to resemble a terrestriall paradise. The Portugals terme it not altogither unfitly, The table of the cape. And to the end they might not faile of the meanes to enjoy so pleasant a place, there is close vnder it a very good harbour which is called The port of Conception. The people of this place called in the Arabian toong Cafri, Cafres, or Cafates, that is to say, lawlesse or outlawes, are for the most part exceeding blakke of colour, which very thing may be a sufficient argument, that the sunne is not the sole or chiefe cause of their blacknes; for in diuers other countries where the heate thereof is farre more scorching and intolerable, there are tawnie, browne,
yellowish, ash-coloured, and white people; so that the cause thereof seemeth rather to be of an hereditarie qualitie transfused from the parents, then the intemperature of an hot climate, though it also may be some furtherance thereunto. The Hollanders in the yeere 1595. entering the harbour of Saint Bras, somewhat to the east of Cabo das Agulhas, had conversaion and truck with some of these Cafres, whom they found to be a stoute and valiant people, but very base and contemptible in their behauior and apparell, being clad in oxe and sheeps skins, wrapped about their shoulders with the hairie sides inward, in forme of a mantle. Their weapons are a kinde of small

VNDDESCRIBED BY JOHN LEO.
slender dartes or pikes, some whereof are headed with some kinde of mettall, the residue being vnheaded, and hardened onely at the points with fire. They couer their priuie parts with a sheepes tayle, which is bound vp before and behinde with a girdle. Their home-beasts are, like those of Spaine, verie well limmed and proportioned. Their sheepe are great and faire, not hauing any woll on their backes, but a kinde of harsh haire like goates. Other particulars by them obserued, for breuities sake, I omit.

Now that we may proceede in describing the residue of Cafraria, hauing sayled about the cape of Buena esperanqa westward, albeit the coast in regard of the greatnes thereof may seem to ly directly north, yet for the space of seuentenee degrees, till you come to Cabo Negro, (the farthest North-westerne bound of this fift part of the lower Ethiopia) it trendeth somewhat to the west: along which coast somewhat within the land appeareth a mighty ranke or ridge of mountaines, called by the Portugales Os picos fragosos, that is, the ragged points or spires, OsPicosfrabeing besides their excessiue height, craggie, rough, and Gosos steepe, lying bare, desolate, and vitterly voide of all succour, and seruing for no other end, but for an object to the windes, and a mark for the tempests. The residue of the coast, till you come to Cabo Negro, sometimes lying lowe and sometimes high, sometimes shooting into the sea, and sometimes again gently retiring, containeth many plaines, hils, vallies, and places most fertile and delightful; some of them being alwaies of so fresh and pleasant view, as they seeme to represent a continuall spring.

A DESCRIPTION OF PLACES
The kingdome of Matama.
A ngola.
The sixt and last part of the lower or extreme Ethioquia, containing tke kingdome of Congo, whereunto in times past were tributarie and subject the kingdomes of Matama, and Angola to tke south; the kingdomes of Quisama, and Pangelungos to the east; and to the north the kingdome of Anzicana inhabited by the Anzichi, and Loango peopled by the Bramas.
- o. o 0100  Ist therefore (according to our proposed order) that we may begin 0 o with the most southerly parts; The kingdome of Matama’ so called after the
name of the king thereof, (who being a Gentile ruleth ouer 5°diuers prouinces named Quimbebe) bordereth north vpon the first great lake whereout Nilus springeth, and vpon the south frontiers of Angola; east it abutteth vpon the western banke of the riuer Bagamidri ; and stretcheth south as far as the riuer Brauagul, which springeth out of the mountains of the moone. This countriy standeth in a good & holesome aire, & aboundeth with mines of cristall & other metals, and hath victuals great plenty. And although the people thereof & and their neighbour-borderers doe traffike togethier; yet the king of Matama and the king of Angola wage war offten times one against another: also the said riuer Bagamidri deuideth this kingdome of Matama from the great empire of Monomotapa before described, which lieth to the east thereof.

Next followeth Angola, a kingdome subject in times

VNDESCRIBED BY IOHN LEO.
past to the king of Congo, the gouernour whereof not verie many yeeres ago, growing exceedingly rich & mightie, rebelled against his soueraigne, & by diuers attempts skaking off the yoke of superioritie, became himselfe an absolute prince. This countrey, by reason that the people are suffered to haue as many wiuies as they list, is a place most woonderfully populous. The goe whole millions of them to the warres, not leauing any men of seruice behinde: but for want of victuals they are often constrained to leave their enterprises halfe vndone. Vpon this king, Paulo Diaz, who remained gouernour in these parts for the king of Portugall, waged warre: the reason was, bicause certaine Portugall merchants and others going by way of traffike to Cabaza, a towne situate an hundred and fiftie miles from the sea, where the king of Angola usuallie resideth; they were by order from this king, the same yeere that king Sebastian died in Barbarie,45 sodainly spoiled of their goods, and part of them slaine; it being alleaged, that they were all spies, and came to vndermine the present state. Whereupon Paulo Diaz prouided himselfe, and with two galeots did many notable exploits on both sides of the riuer Coanza. Finally having built a forte in a very commodious and hillie ground, at the confluence or meeting of the riuer last mentioned, and the riuer Luiola, with a small number of Portugals, joined to the aide sent him from the king of Congo and from certaine princes of Angola his confederates, he gau the foresaid king (notwithstanding his innumerable troupes of Negros) diuers & sundry ouerthrowes. The said riuer Coanza springeth out of the lake .of Aquelunda,46 situate westward of the great lake whereout Nilus takes his originall. In this kingdome are the mountaines of Cabambe, abounding with rich and excellent siluer mines ;47 which haue ministred the chiefe occasion of The siluer Mis of Caall the foresaid warres. This region aboundeth also with am e. other minerals, and with cattell of all sorts. Most true it is,

A DESCRIPTION OF PLACES
that dogs-flesh is heere accounted of all others the daintiest meate; for which cause they bring vp and fatten great plentie of dogs for the shambles. Yea it hath beene constantly affirmed, that a great dogge accustomed to the bull was sold in exchange of two and twentie slaues, the value of whom coulde not amount to
much lesse than two hundred and twentie ducats. The priests of Angola called Gange, are helde in such estimation and account, as the people are verily perswaded, that they haue in their power abundance and scarctie, life and death. For they haue knowledge of medicinable hearbes, and of deadly poisons also, which they keepe secret vnpto themselues; and by means of their familiaritie with the diuell, they often foretell things to come.

Quizama. Towards the lake of Aquelunda before mentioned, lieth a countrey called Quizama; the inhabitants whereof being gouerned after the manner of a common wealth, haue shewed themselves very friendly to the Portugals, and haue done them speciall good seruice in their warres against the king of Angola. Thus hauing briefly pointed at the former three bordering countries, let vs now with like breuittie passe through Bahia das vacas in thirteene, and endeth at Cabo da Caterina in two degrees and a halfe of southerly latitude. True it is that the coast neere vnpto the saide Bay of Cowes is subject to the king of Congo, but the inland is gouerned by him of Angola. East and west it stretcheth from the sea in breodth as farre as the lake of Aquelunda, for the space of sixe hundred miles, and is diuided into The sixpro- sixe prouinces: namely, the prouince of Pemba, situate in uinces of Congo. the very hart and center of the whole kingdome; Batta, the most easterly prouince, where the ancient writers seeme to haue placed Agifymba; Pango which bordereth vpon

DESCRIBED BY JOHN LEO.

Pangelungi; Sundi the most Northery prouince; Sogno which stretcheth ouer the mouth of the great riuer Zaire; and Bamba which is the principall of all the rest both for extension of ground, for riches, and for militarie forces. In the prouince of Pemba, or rather in a seuerall territorie by it selfe, standeth the citie of Sant Salvador, in former times s. Salvador the chiefe citie called Banza, being the metropolitan of all Congo, and the of Congo. seate of the king, situate an hundred and fiftie miles from the sea, vpon a rocke and high mountaine; on the verie top whereof is a goodly plaine abounding with fountains of holesome and sweete water, and with all other good things which are requisite either for the sustenence, or solace of mankinde: and vpon this plaine where Sant Salvador is seated, there may inhabitie to the number of an hundred thousand persons. In this citie the Portugals haue a warde by themselues, separate from the rest, containing a mile in compasse: and about that bignes also is the palace or house of the king. The residue of the people dwell for the most part scatteringly in villages. It is a place enriched by nature with corne, cattell, fruits, and holesome springs of water in great abundance. The principall riuer of all Congo called Zaire, taketh his chiefe originall out of Thegreatedruer the second lake of Nilus, lying vnder the Equinoctiall line of Zaire. and albeit this is one of the mightiest riuers of all Africa, being eight and twentie miles broad at the mouth, yet was it
utterly vnknowen to ancient writers. Amongst other riuers it receiueth Vumba and Barbea, which sprung out of the first great lake. In this countrey are sundry other riuers also, which fetch their originall out of the lake of Aquelunda: the principall whereof are Coanza, which diuideth the kingdome of Congo from that of Angola, and the riuer Lelunda, which breedeth crocodiles & water-Crocodiles. horses which the Greeks call Hippopotami, of which creatures the isle of horses in the mouth of the riuer Zaire taketh denomination. The Hippopotamus or water-horse Water-horses.

A DESCRIPTION OF PLACES
is somewhat tawnie, of the colour of a lion; in the night he comes on lande to feed vpon the grasse, and keepeth in the water all the day time. The Africans tame and manage some of these horses, and they prooue exceeding swift; but a man must beware how he passe ouer deepe riuers with them, for they will sodainly diue vnder water.

Also in these riuers of Ethiopia are bred a kinde of oxen, which liue euery night vpon the lande. Here likewise breedeth another strange creature, called in the Congonian language Ambize Angulo, that is to say, a hogge-fish, being so exceeding fatte, and of such greatnes, that some of them wee aboue flue hundred pound. This abidance of waters, togethier with the heat of the climate, which proceedeth from the neerenes of the sunne, causeth the countrey to be most fruitfull of plants, herbs, fruits, and come; & much more fertile would it be, if nature were helped forward by the industrie of the inhabitants. Heere also, besides goates, sheepe, deere, Gugelle, conies, hares, ciuet-cats, and ostriches, are great swarmes of tigres, which The Zebra. are very hurtfull both to man and beast. The Zebra or Zabra49 of this countrey being about the bignes of a mule, is a beast of incomparable swiftnes, striked about the body, legges, eares, and other parts, with blacke, white and browne circles of three fingers broad; which do make a pleasant shew. Buffles, wilde asses, called by the Greekes Onagri, and Dantes (of whose hard skins they make all their targets) range in heards vp and downe the woods. The elephant. Also here are infinite store of elephants of such monstrous bignes, that by the report of sundrie credible persons, some of their teeth do weigh two hundred pounds, at sixteene ounces the pound: vpon the plaines this beast is swifter than any horse, by reason of his long steps; onely he cannot turne with such celeritie. Trees he overturneth with the strength of his backe, or breaketh them between his teeth; or standeth uprigh vpon his hinder feete, to browse vpon the leaues and tender sprigs. The she elephants beare their brood in their wombes two yeeres before they bring forth young ones: neither are they great with young, but onely from seuen yeeres to seuen yeeres. This creature is saide to liue 150. yeeres ; hee is of a gentle disposition ; and relying vpon his great strength, he hurteth none but such as do him injurie; only he will in a sporting maner gently heaue vp with his snowte such persons as he meeteth. He loueth the water beyond measure, and will stande vp to the mid-body therein,
bathing the ridge of his backe, and other parts with his long promuscis or trunke. His skin is fower fingers thicke; and it is reported, that an elephant of this countrey being stricken with a little gunne called Petrera, was not wounded therewith, but so sore brused inwardly, that within three daies after he died. Heere are likewise reported to be mightie adders or snakes of flue and twentie spannes long, and flue spans broad, which will swallow vp an whole stagge, or any other creature of that bignes. Neither are they here destitute of Indie-cockes and hens, partridges, feasants, and innumerable birds of praiie, both of the lande and of the sea; whereof some die vnder the water, which the Portugals call Pelicans. Ouer against the most southerly part of the said king- The isle and hauen of dome of Congo, where it confineth with Angola, lyeth an Loanda. Isle called Loanda, being twentie miles long, and but one mile broad at the most, betweene which and the maine land is the best port of all that Ocean. About this Isle do haunt infinite store of whales, where, notwithstanding no amber at all is found; which is a manifest argument that it proceedeth not from these creatures. Here they fish for certaine little shels, which in Congo and the countries adioyning are vsed in steed of mony. The well-waters of this Isle, when the sea ebbeth, are salte, but when it floweth they are most fresh and sweet. In this Isle5° the Portugals haue a towne from whence they traffique to Congo and Angola: and amongst other commodities, they get every yeere in those parts about flue thousand slaues; the custome of which trade belongeth by ancient constitutions vnto the crowne of Portugale. Loango. To the north of Congo vpon the sea coast beginneth the kingdome of Loango tributarie in times past to the king of Congo: It aboundeth with elephants; and the inhabitants called Bramas are circumcised after the lewish manner.51 Anzichi. Next vpon them doe border the Anzichi, who are possessed of large countries, namely from the riuer Zaire euen to the deserts of Nubia. They abound with mines of copper, and with sanders both Red, and Gray which are the best; and some are of opinion, that here groweth the right Lignum Aquil, which is of so excellent vertue in phisick.52 They hauë one supreme king, with many princes vnder him. They traffique in Congo, and carrie home from thence salt and great shels to be vsed for coine (which are brought thither from the Isle of San Tom6) in exchange of their cloth of the palme tree, and of luory: but the chiefe commodities which they part from, are slaues of their owne nation and of Nubia: and the said shels they vse also instead of jewels and ornaments. Both they and the Bramas before mentioned do carry for their defence in the warres, certaine targets made of the skin of a beast which in Germany is called Dante :5 their weapons offensiue be little bowes and shorte arrowes, which they shoot with such wonderfull celerity, as they will discharge twentie one after another, before the first arrow fall to the ground. They haue shambles of mansflesh as wee haue of beeues and muttons. They eat their enemies which they take in the warres:
their slaues which they cannot make away for a good round price, they sell vnto the butchers: and some will offer themselues to the

VNDESCRIBED BY IOHN LEO.
slaughter, for the loue of their princes and patrons: so sillie they are, that to do their lوردes a pleasure, they will not refuse present death: wherefore the Portugals repose not so much trust in any kinde of slaues as in them : and they are very valiant also in the warres.
But to returne vnto the sea-coast; from the mouth of the riuver Zaire Northward, the land bearing out somewhat more to the west, is framed into three headlands, namely, Cabo primero, Cabo da Caterina, and the cape of Lopo Gonsalues, which is a cape very well knowen in regard of the eminency and outstretching thereof. It lyeth in one degree of southerly latitude. Ouer against which cape within the land do inhabite the people called Bramas in the kingdome of Loango beforementioned. From hence for the space of flue or sixe degrees, till you come to Punta delgada, or The slender point, the coast lyeth in a manner directly North; most of which tract is inhabited by a nation of Negros called Ambus. North of the said slender point you haue Rio dos Camarones, or The riuver of shrimps, which is full of little Isles ; not far from which riuver are The countries of Biafar and Medra, inhabited with people which are addicted to enchantments, witchcrafts, and all kinds of abominable sorceries.
Much more might be said concerning this sixt part of the lower Ethiopie: but because it is in so ample and methodicall a manner described in the historie of Philippo Pigafetta, most iudiciously and aptly Englished by the learned Master Abraham Hartwell; I refer the reader thereunto, as to the principal and the very fountaine of all other discourses which haue bin written to any purpos of Congo and the countries adioyning.

A DESCRIPTION OF PLACES
Of this long pepper read Ramusius, vol. i,fol. 115 pag. 2.
The prouinces of Ternian, Dauma, and Meleghete.
Grana Paradisi.
Of the countries of Benin, Meleghete, Ghinea, and Sierra Leona.
W Estward from the countries last mentioned lyeth the
kingdome of Benin, hauing a very proper towne of that name, and an hauen called Gurte. The inhabitants liue in Idolatry, and are a rude and brutish nation; notwithstanding that their prince is serued with such high reuence, and neuer commeth in sight but with great solemnity, & many ceremonies : at whose death his chiefe favorites count it the greatest point of honour to be buried with him, to the end (as they vainly imagine) they may doe him seruice in another world. This countrie aboundeth with long pepper called by the Portugals Pimienta dal rabo, which is as much to say, as pepper with a tayle: This tailed or long pepper so far excelleth the pepper of the east Indies, that an ounce thereof is of more force than halfe a pound of that other. For which cause the kings of Portugale haue done what lay in them, to keep it from being brought into these parts of Europe, least it should too much abase the estimation and price of their Indian pepper. All which
notwithstanding there hath bin great quantitie secretly conueied from thence by
the Portugals: as likewise the English and French nations, and of late yeeres the
Hollanders haue had great traffique into those parts.

Next follow the kingdomes of Temian and Dauma; and lower to the south the
prouince of Meleghete, a place very famous and well knowne, in regard of a little
red graine which there groweth, being in shape somewhat like to the Millet of
Italy, but of a most vehement and fiery tast: and these little graines are by the
apothecaries called Grana Paradisi. Here also is made of oile and the ashes of the
Palme-tree, a kind of sope, which hath double the force of ours. For which cause
it is forbidden by the

VNDESCRIBED BY IOHN LEO.

Portugals, who haue vpon that coast a little to the east of The castle of Mi na.
Cabo das tres puntas, in the northerly latitude of flue degrees, a strong castle
called San Georgio de la Mina, whereunto by way of traffike they draw all the
gold and riches of the countries adioining.

Westward of these lieth the countrie of Ghinea, inhabited by a people which the
ancient writers called

* Autolat-e, and Ichthyophagi: Ghinea is so named, Pliny calleth them A utololes.
according to the chiefe citie thereof called Genni, being situate vpon the riuier of
Sanega. The people of this countrie towards the sea-coast liue vpon fish; and they
of the inland sustain themselues with Lizards and such like creatures; & in some
places more temperate their food consisteth of herbes and milke. They conuerse
togerther in great families; and they fight oftentimes for water and for pastures;
neither haue they anie knowledge of learning or liberall arts. So long as the sun
continueth in our northern signes, that is, from the xj. of March to the xij. of
September, this people in regard of extreme scorching heat, are constrained all the
day time (being ordinarily with them of 12. howers) to retire themselues within
their houses, and do all their busines in the night. The countrey in most places is
destitute of trees that beare fruite: neither haue the greatest part of the inhabitants
any haire on their bodies, saue onely a thicke tuft growing vpon their heads: they
sell their children vnto strangers, supposing that their estate cann not possiblie be
impaired. Vnto these naturall miseries of the place, you may ad the insupportable
mischiefs which are here done by the locustes: for albeit these creatures do
infinite harme likewise in all the inner parts of Africa; yet seemeth it that this
countrie of Ghinea is their most proper habitation; whither they do often resort in
such innumerable swarms, that like a mightie thicke cloud they come raking along
in the skie, and afterward falling downe, they couer the face of the

A DESCRIPTION OF PLACES
earth, deuouring all things that they light vpon. Their comming towards any place
is known two or three daies Locustes. before by the yellownes of the sunne. But
in most places
where they haunt, the poore people are reuenged of them by killing and driyng
them in the aire for their foode: which custom is commonly vused by the Arabians
and Ethiopians; and the Portugals also haue found vessels full of them vpon the
coast of Cambaia, where they do the like mischieves. They which have eaten of them affirm that they are of a good taste, and that their flesh (so much as it is) is as white as that of a lobster. These may seem to be at one with those grasshoppers which God sent to plague Egypt; and the same kind of locustes, which the holy prophet John Baptist fed upon in the wilderness.58

Moreover along the coasts of Meleghete and Ghana are divers small rivers and freshets, containing little water, and running a slow pace: which notwithstanding are the best and pleasantest things that are to be found in these forlorn countries. For wheresoeuer any little water springeth or runneth, thither do the people resort, partly for the watering of their scorched grounds, & partly to quench their own thirst. Also upon these coasts are divers and sundry headlands which stretch into the sea; as namely The faire cape, The three-pointed cape, The cape of Sierra Leona. Palmetrees, Cabo da Verga, & Sierra Leona. This cape last mentioned hath an exceeding high mountaine thereupon, which causeth it to be seen a mightie distance off. It seemeth to be the same promontorie which Hanno and Ptolemy call The chariot of the gods. It is called by the name of a lyon in regard of the dreadful thunders and lightnings which are continually heard from the top thereof: howbeit neere vnto it are found apes, munkeies, and such other beasts as Hue in temperate places.

UNDESCRIBED BY JOHN LEO.

Of Cabo verde, Sanega, and Gambra or Gambea. Northward of Sierra Leona lieth Cabo verde, or the greene cape, called by Ptolemy Arsinarium, and being one of the most famous headlands in Africa. It is environed with two rivers, namely the river of Gambra or Gambea on the south, and the river of Senaga on the north; which last river is esteemed to be an arme of Ghir or Niger. Gambea springeth out of the same fountains assigned by Ptolemy vnto Niger (which by all the ancient writers is placed heereabout) and out of the lake of Libya. It is larger and deeper then that other of Senaga, and runneth a crooked course, receiuing many lesser rivers A fatorie of thereinto. One hundred and eighty leagues within the the Portugals mouth of this river the Portugals have a factorie or place of traffique, called The factorie of Cantor. Hither by exchange of sundry wares, they draw the gold of all those countries. In the midde way (as it were) vnto the said factorie, there is a place called the isle of Elephants in The isle of elepha nts. regard of the huge numbers of those creatures. The river of Senaga is thought to take his original out of the lakes called Chelonides. It containeth certaine Isles, which in regard of their rough and ragged shape are good for nothing, but to breed adders and such like hurtfull things, and these Isles in many places make the river utterly innaugible. About one hundred and fiftie leagues A mightie cataract or fall from the mouth thereof, it falleth spouting-wise with such of Senaga. maine force from certaine high cliffs or rocks, that a man may walke drie vnder the streame thereof. The Negros in their language call this place a Bowe. It is reported that Nilus doth the like at his Cataracts or ouerfals. And Strabo writeth of certaine
riuers of Hircania, which from exceeding steepe and craggie rockes gush with such violence into the Caspian sea, that whole armies may passe vnder them without danger of drowning. Into this riuer of Senaga,

A DESCRIPTION OF PLACES
among many riuers vnknowne, falleth one, which passing through a red soile, is itselffe also died red : and whosoever drinketh of the waters first of the Red riuer, and after of Senaga, is constrained extremely to vomite. Along the banks of this mightie riuer inhabite the blacke and barbarous nations of the Gialofi,60 the Tucuroni61 the Caraguloni,62 and the Bagani.63 Finally it voideth into the sea at two mouths, one of which mouthes is a mile broad. And it is strange to consider, how vpon the south side of this riuer the people are blacke and well proportioned, and the soile pleasant and fertile ; whereas on the north side they are browne and of a small stature, and do inhabite a barren and miserable countrie. In both the said riuers of Gambra and Senaga do breed diuers strange kindes of fishes, and other creatures of the water, as namely crocodiles, sea-horses, and winged serpents ; and hither come to drinke sundry sorts of wilde beasts. The lands comprehended betweene them both, by reason of their yeerely inundation (for from the xv. of Iune they increase fortie daies together, and are so long time decreasing, after the manner of Nilus) abound with all kinds of graine and pulse wherof the climate is capable, as namely with beanes, pease, millet, &c. but wheate, rie, barley, and grapes cannot there attaine to ripenes and perfection, by reason of ouermuch moisture: saue onely some small quantite of wheat neere the deserts where the Caraguloni inhabite. But their chiefe sustenance is Zaburro, otherwise called Ghinie-wheate or Maiz, which they sowe after the inundation of their riuers, casting some quantitie of sande thereupon to defend it from the heate, which otherwise would scorch the grounde too excessiuely. They drinke the iuice of the palme-tree, which they cut and lance for that purpose: and this iuice not being tempered, it is strong and headie as any wine. Neither are they heere destitute of mightie adders, of lions, leopards, and elephants; but

VNDSCRIBED BY IOHN LEO.
beasts for labour they haue none, saue onely a small kinde of oxen, and goates. The horses which are brought thither by merchants, liue but a short time. The aire, by reason of abundance of lakes bredde by the ouerflowes of their riuers, is moist and grosse. And heere fall most vnholesome and palpable dewes. It raineth in these countries from October till the end of July, euery day about noone, with thunder and lightning.
All the kingdomes and countries by vs before described, from the cape of Buena esperanqa, to the riuer last mentioned, are inhabited by blacke people. The most northerly are the Gialofi, who spread themselues between the two foresaid riuers for the space of flue hundred leagues eastward: so that the riuer Senaga is the vtmost northern bound of Negros, or nations extremely blakke; howbeit vpon the bankes thereof are found people of sundry colours, by reason of the varietie of women.
Betweene this riuer of Senaga and Cabo blanco, or the white cape, lieth a
countrey called by some Anterote, being all ouer in a manner sandy, barren, lowe,
and plaine; neither is there in all this distance any place of account or reckoning,
saue onely the isles of Arguin (whereof we will intreat among the isles of Africa)
and a territorie of towne sixe daies journye within the maine, called Hoden. This
towne is not walled, but lieth open, and consisteth of Ramusius vol. the wandring
Arabians rude and homely habitations, being I*fo. 99. notwithstanding a place of
Rendezeous or meeting for all such as trauell in Carouans from Tombuto, and
other places in the lande of Negros to Barbarie. The principall food of the
inhabitants heere, are dates and barly, both which the soile yeeldeth indeed, but
not in so plentifull a manner: and they drinke the milke of camels & of other
beasts, for wine they haue none at all. These people are Mahumetans, and most
deadly enimies to Christians: neither abide they long in any place, but runne
rouing and F2

A DESCRIPTION OF PLACES
wandring vp and downe those deserts. They are themselues very populose, and
haue abundance of camels, vpon whose backes they carrie copper, siluer, and
other commodities from Barbarie to Tombuto, and to the residue of the land of
Negros.64
From Cabo blanco to the regions of Sus, and Hea (which are the first prouinces
described by John Leo) excepting a small portion onely of Biledulgerid, you haue
nothing but part of the vast, fruitles, & vnhabitatable desert of Libya, called by the
Arabians Sarra,65 which stretcheth from the westerne Ocean as farre as the
frontiers of Egypt.
Thus from the very bottome of the Red Sea, hauing coasted along the easterne
and westerne shores of the most southerly partes of Africa, and briefly described all
the principall knowen empires, kingdomes, and regions within that maine, which
are left vntouched by our author John Leo; let vs now with little or more breuitie
prosecute the description of the islands which are by the hand of the omnipotent
creator planted round about this ample and spacious continent.

VNDSCRIBED BY IOHN LEO. 85
A briefe enumeration and description
of all the most famous and knowne Is/andes
situate round about the coasts of Africa, which haue
beene omitted by IoHN LEO: beginnigfirst with
the most nothereasterly, and so by little and little
bringing our selues about the Cape of Buena
Esperan~a neerer vnto Europe.
The Islands of the Red Sea.
1 oOth the shores of the Red sea, as well Babelmandel.
o  on the African as on the Arabian side, are euerie where beset with many small
islets and rockes, which 0 lie so thicke together, that they 0. make the navigation
all along the
0 = o o o said coasts to be most dangerous
and difficult.
The isles of the Red sea most woorthie to be remembred, are these following.
Babelmande66 a little isle situate in the very mouth of the Red sea, in twelue
degrees, containeth two leagues in compasse, being from either of the firme lands
three miles distant, and standing about twentie paces high out of the water. By
Ptolemey it is called The isle of Diodorus. Vpon this isle, or one of the continents
adioining, are to be hired the most experimted pilots for al that narrow sea, euen
as far as Suez. And from the easternie and westernie side of this islet, Strabo
reporteth that the twofold enterrance of the Arabian Gulfe was barred with a
double chaine. More to the north standeth Camaran, being about eight leagues
from the Arabian The ileof coast in fifteene degrees of latitude.67 Vpon this isle
are to Camaran.

A DESCRIPTION OF PLACES
be seene great ruines of ancient buildings. It hath one indifferent good hauen, and
aboundeth with fresh water, (a thing most precious and acceptable in those parts)
with salt, and with cattell. On the other side towards Africa, Dalaqua. in fifteene
degrees and an halfe, standeth the isle of Dalaqua
of about thirtie miles in circuite,68 which space is almost contained in the length
thereof, being a place very famous for the abundance of pearles which are there
cought; Mua. wherewithall likewise the isle of Mua neere vnto it is richly
Alazua. endowed. Next followeth Mazua69 in forme like to an
halfe moone, and not aboue a bow-shoot distant from the African maine:
betweene which isle and the continent, there is an excellent hauen which is now
the only porte that Prete ianni hath in all his dominions; for which (as you may
read before in the description of the said princes empire) his lieutenant
Barnagasso is constrained to pay a
greate yeerely tribute to the Turke.
Ouer against Mazua, vpon the firme, standeth the towne
of Ercooco. Vpon this little isle are diuers houses of Arabians, built of lime and
stone; and others of claie The isle, couered with thatch. North of Mazua standeth
Suaquen hauen, and
citie of in a certain lake made by the sea, which there insinuateth Suaquen. it
selfe within the land, and frameth a most secure and
commodious hauen. On this small islet is built the faire and stately city of
Suaquen,70 being almcst as large as the isle it selfe; wherein resideth the Turke's
lieutenant or
Bassa of Abassia.

saue onely Socotera; which (as John Barros supposeth) was of old called by
Ptoleyney Dioscoridis, & lieth in sight of cape Guardafu, which the same author
nameth Aromata Prom6ntorium.

VNDESCRIBED BY IOHN LEO.
Being about three-score miles long, and flue and twentie miles broad, it is diuided with a rough and exceeding high ridge of mountaine, and is subie ct vnto most terrible and boisterous windes, which do out of measure dry and parch the same. For which cause, and in regard of the slothfull rudenes of the inhabitans, it is very scarce of victuals: for it yeeldeth neither wheate, rice, wine, nor hony. In the vallies and places of shelter it affoordeth some quantitie of Millet, of dates, and of sundrie kinds of fruits: neither is it altogether destitute of pasture for cattell. It is frequented by merchants for *Cinabre, Sanguis Draconis, and the* Or vermillion. most excellent Aloes of the world. It hath no hauen of importance. The Portugals are heere possessed of two Two townes of the Portugales small townes, one called Coro, and the other Benin; and in Socotora, here in times past the king of Fartac [A countrey of Arabia Fwx,] had a castle and a garrison of soldiers vpon this isle, which castle being taken by the Portugals, was afterward by them abandoned, because it quited not the cost. The inhabitans being of a browne colour, and of a good constitution; are in religion a kind of Christians.71 They hold an opinion that Saint Thomas suffred shipwracke vpon this isle, and that of his ship was built a most ancient church, which as yet is to be seene walled round about, with three allies or partitions, and three doores. Furthermore they Hue for the most part in caues or in cabins made of boughes, very farre from the sea. They go apparralled in course cloth, or in the skins of beastes. In war their weapons are slings, and swordes made of base iron: and the women are as good soldiers as the men. They are much addicted to Magick and enchantments, and doe bring to passe matters incredible. They haue no vse at all of nauigation, nor of traffique, and yet forsooth they esteeme themselues the most noble and worthy people vnder the heauens; as also they are utterly voide of

A DESCRIPTION OF PLACES
The two sisters.
* Isles which are not inhabited.
learning: which I doe note, because that such as are learned make but small account of their wisedome.
To the North of Socotera are two small Isles which are called the two sisters: the inhabitans whereof being of an oluye-colour, liue without lawe, and haue no conuersation with any other people. The commodities of these Islets are luorie, amber, Sanguis draconis, Aloes, and a kind of pretious stones called Nizzolij. Likewise ouer against Socotera are two other Islets, one called the Isle of men, and the other the Isle of women, being distant thirtie miles asunder, and flue miles from Socotera. They are so termed, because that in the one dwell men onely, and in the other women. Howbeit they visite one another at certaine seasons: but they cannot stay one in the Isle of another aboue three moneths, in regarde of a secret qualitie of the ayer which is contrary to either sexe. A matter (if it be true) most strange and admirable.
Of the Isles lying in the sea called Sinus Barbaricus, ouer against the Easterne and.Southeasterne shore of Africa.
A LI along from the cape of Guardafu to the cape of
Buena Esperanqa are found sundry Islands, partly dispersed heere and there in the sea, and partly adjoining vpou the firme land. Such as are far into the sea, are the greatest part vnhabited, as namly, the 'Isle of Don Garqia, The *three and The *seuen brethren, As rocals partidas, the Isles of Sant Brandon, and those of Mascarenh, of Sant Francis, of Santa Apollonia, of John de Lisboa, of Cosmoledo: and betwenee the great Isle of Saint Laurence and the maine, the Isles of Do Natal or of the natuitie, as likewise the three Isles of Comoro, with those of Aliaoa, of Spirito Santo, and of sant Christopher.72

VNDESCRIBED BY IOHN LEO.
But of those which the vicinity of the firme land hath Concerning the islet of Mobara, made more noble and frequented, the first that offereth it Quiloa, & Mofambique read selfe to our consideration, is the Isle of Mombaza in foure more at large in the discours degrees of southerly latitude, cut out by a certaine chanel of Zanguebar before set or arme of the sea, which deuideth the same from the downe, whereas I thzought it maine of Africa: in compasse it containeth twelue miles ; meetst to intreat o f tem, and at the entrance of the saide chanel, vpon a downe, being (as it standeth the city of Momba~a, built very handsomely after were) certaine fragmants of the Arabian fashion. Somewhat farther from the continent the maine, & hauing large are situate the Isles of Pemba, Zanzibar, and Monfia78 territories therof subiect inhabited by Negros; the greatest of which is Zanzibar, vnto them. the prince whereof is called by the name of a king; and it lyeth vnder sixe degrees of south latitude, being from the main ten leagues distant. But the soueraigne of all these Isles was Quiloa,74 inhabited like the rest, with Mahumetans of little bodies and abiect mindes. It aboundeth with rice, millet, cattel, woods of palme-trees, limons, orenges, & sugar-caneees; whereof notwithstanding they are ignorant how to make sugar. The city standeth vpon the sea-shore ouer against the firme land : it is built of pure marble, and the streetes are very narrow: a thing common among the Arabians, whereby they vse to defend themselues, after the enemie hath once entered their townes. From this Isle to Mozambique are about an hundred leagues. Without the porte lieth Misa, and three miles off Songo and Canga inhabited by Moores. Next follow As Ilhas do Afotatado, or The isles of the scourg'd, bicause here a certaine pilot that was a Moore, who had determined to .attacke the whole fletee of Vasco da Gama receiued punishment. Concerning Monambique called by Ptolemeay and other ancient writers Prassia, we haue intreated before. Fower miles from thence lie the desert isles of Saint George: and then the isles of Angoscia75 inhabited by Moores. These are stored with indifferent quantitie of victuals and here vpon an east winde they gather plentie of

A DESCRIPTION OF PLACES
Plentie I Am- Ambergrise. An hundred and fiftie miles from Cabo dos bergrise. corrientes, lieth A Ilha das vacas, or The isle of Cowes, with a castle thereupon, and store of good water. As Ilhas llanas, or The plaine isles are not woorth the speaking of. A Ilha da cruz, otherwise called Ilha das fontanhas, was the farthest limite of Bartholomew Diaz his navigation, who was the first Portugale that euer doubled the cape of Buena esperan~a, and hauing doubled it, returned backe without discouering any farther.

Of the Isle of Saint Laurence, otherwise called Madagascar.

This isle called by the Portugales The isle of Sant Laurence, by the naturall inhabitans Madagascar, by Paulus Venetus Magastar, by Ptolemy Menuthias, and by Plinie Cerne, is accounted one of the greatest, noblest, and richest in the whole world. About the midst thereof it approcheth towards the maine of Africa, in forme of an elbowe, being distant from thence an hundred theescore and ten miles. The extreames of this isle are very farre separate from the saide maine, and especially that which stretcheth toward the northeast. The whole isle containeth in breeth fower hundred and fowerscore, in length one thousand two hundred, and in cempasse fower thousand miles; so that in bignes it farre exceedeth Italy, though it be not so well inhabited and manured. Situate it is beyond the Equator in seventeen degrees, and stretcheth from thence to sixe and twentie degrees and an halfe of southerly latitude. It is plentifully endowed with all things needfull for mans vse: for it yeeldeth cotton, Millet, Rice, Potatos, sweete orenges, sugar-canes, and sundry kindes of pulse: as likewise, amber, Jette, siluer, copper, red sanders, saffron, a spice somewhat like unto cloues, and some quantitie of ginger. Moreouer, heere are lions, leopards, stags, roe-deere, goate, kine, sheepe, and other beastes both tame and wilde. Heere are likewise innumerable easphants,6 so that from hence is conuied great quantitie of iuorie. They haue also great store of camels, whose flesh the inhabitants eate for the holesomnes thereof. The people (except some few Moores vpon the coast) are idolaters, of colour black, with curled haire, very barbarous, and in fashions resembling much the Cafres. They go naked all saue their priuities, which they couer with cloth of cotton: and they vse in the warre certaine crooked staves headed with bone. The Iesu its in their letters report, that in one part of this island there are white people found; who (as they affirme) are descended from the people of China; whereby ma y be gathered the great length of the Chinians nauigations, and the largenes of their empire. The Portugals sailing towards India in due time, do passe betweene this great isle and the firme land; but if the season groweth towards winter, they holde on their course (as themselues report) on the backe-side thereof. In these two courses of nauigation they haue found, and daily do discouer sundrie isles, but of small account, part whereof we haue mentioned before. Amongst others, as it were ouer against Mozambique, lieth on a certaine strand or shold an isle calle d Langane of a reasonable bignes, with a great riuer therein, being inhabited by Moores. And the farthest toward the west are those isles which the Portugals call Os Romeros.
On the northeast part of this isle is the Bay of Antogill, being one of the safest and most commodious harbours in the world.

Of the Isles of the Ethiopian Sea about the cape of Buena esperanfa.

This sea I take to be most exceeding deepe, because it hath fewer Isles then the former, and those few which it hath are but little ones. The first that was...

A DESCRIPTION OF PLACES

discouered on this side the cape of Buena Esperaqna is that of Don Alu arez, situate in thirtie degrees and an halfe. And to the northwest of that is the Isle of Tristan d' Acunna beeing distant i 5oo. miles from the cape, and beyond the Equinociall eight and thirtie degrees; which beeing of a round forme, containeth in compass fiftie leagues. It is full of birdes, and especially of sea-crowes or cormorants, and round about it lie foure other small islets. The marinners hold, that neere vnto this isle, as vnto that of Bermuda, there are continual stormes and tempestes. Not far from the main are certaine dry and rockie isles, and others of none account.
The Isles of Santa Helena, and of the Ascension.

Next followeth in the height of sixteeene degrees of southerly latitude the isle of Santa Helena, discouered by Juan da Noua, being so fitly and commodiously situate for such as returne home from the east Indies into Europe, as it seemeth there of purpose to haue beene planted by God for the furtherance of this voiage, and for the refreshing and comfort of nauigators. In compasse it containeth nine miles, and hath a most perfect healthfull aire, and sundry freshets of excellent water. The soile is of a red colour, and like vnto ashes; it giueth way to ones footing like sand, and a man may shake euery tre e vpon the isle. Heere the kings of Portugall haue enacted, that none may remaine to inhabite, except it be sometime two or three sicke persons for the recouerie of their health; to the end that the fleets may heere plentifully and of free cost furnish themselves with fresh victuals, fruits, and water. So that when they arriue, they usuallly plant or sow some one thing or other, which presently springeth and growth to ripenes; and then the seed falling into the earth, it multiplieth of it selfe. Heere are woods of Eban and Cedar, with infinite store of limons, orenges, and all sorts of fruits; as likewise hogs, geese, hens, partridiges, feasants, Guinie-cocks, and other like creatures brought thither by the Portugals out of Europe, or from other countries. In sailing from Portugall toward India it is not so easily found: but in their returne home they do heere in fewe daies cure all their diseases, and relieue their wants: and heere to their vnspeakable solace and recreation they hunt, foule, and fish, and provide themselves of water, wood, and all things necessarie. To the west thereof appeere in the sea The isles of Ascension. the isles of Santa Maria, and of the Trinitie, which serue for signes vnto the marinners. To the northwest of this isle, towards the coast of Brazil, are the isles of Ascension, so called, because they were first discouered by Tristan Acunna in his returne from the Indies vpon Ascension day in the yeere 15o8. They are all...
vnhabited and desert, and haue vpon them infinite swarmes of a kinde of fowles of the bignes of duckes.

Of the Isles of Loanda, Nobon, and Saint Thomas.

H is situate the isle of *Loanda before mentioned. * Concerning this isle read in the descripmanner, lieth the small isle of Nobon, being a rockie and tiation of Congo. desolate place, but of great importance for fishing; for which cause it is frequented by the inhabitants of Saint Thomas isle. This isle of Saint Thomas being an hundred and fower-score miles distant from the maine, is of a round forme, containing threescore Italian miles from side to side, and an hundred and fower-score miles also in compasse: of which isle (bicause it is situate just vnder the Equinoctiall, so that the horizon thereof passeth by both the poles) it will not be from our purpose to intreat somewhat at large; to the end we may the better understand the qualitie and temperature of such places as are seated in

A DESCRIPTION OF PLACES

that part of the world. This isle when it was first discouered was nothing else but a woode of vnprofitable trees, with their boughs turning crookedly vpward. The aire is extremely hot: in the moneths of March and September, when the sunne passeth perpendicularly ouer, it raineth heere out of measure, and in other moneths heere falleth onely a moist dewe which watereth the ground. In the verie midst it hath a woodie mountaine, which is continually ouershadowed with a thick cloud, which cloud so moistneth the trees that grow in great abundance vpon this mountaine, that from hence droppeth water sufficient for the watering of al their fields of sugar-canies. By how much the sun is more perpendicular ouer this isle, by so much is the aire more cloudie & darke; and contrariwise, the farther it is distant from perpendicularitie, the cleerer and brighter is the skie. In the moneths of December, Ianuarie, and Februarie, such as are borne in Europe, can very hardly walke or moue themselues for faintnes: and all the rest of the yeere, once in eight or ten daies, they seeme to be taken with an hot and a cold fit of an ague, which continueth vpon them for tow howers togethier. They are thrice or oftner let bloud euerie yeere: and few of them liue aboue fiftie yeeres; but their Negros remaine more than an hundred yeers aliue. They which newly arriue there, are commonly surprized with a most dangerous feauer, which holdeth them for twentie daies togethier. And these are let bloud, without any reckoning of ounces. Heere blow no windes at all, but onely from the southeast, south, and southwest, which windes stirre not in the moneths of December, Ianuarie, and Februarie, and therefore these moneths are most extremely hot. But in June, July, and August, they blow a fresh gale. In this isle the French euill, and the scurues are verie rife. The soile is of a meane colour betweene red and yellow, being clammie like claeie, and by reason of the continuall nightly dewes, as soft and pliable as waxe, and of incredible fertility. Besides diuers other good ports, it hath one principall * Orperhaps Pouaraon,

VNDESCRIBED BY IOHN LEO.
among the rest, belonging to the chiefe towne or citie which (as I coniecture) called *Pauoasan, consisting of aboue seuen hundred aybe alone
with Poblacion families, and inhabited by Portugals, and into the saide in spanish, which signiport runneth a little riuier of excellent water. fieth a Colonie
To euery of the Ingenios or sugar-houses (which in all or towne, Seuentie Ingemay amount to the number of seuentie) do belong Negro nios in San slaues, for the planting of their canes and the dressing of To”. their sugars, to some, two hundred, and to others, three hundred a piece, who liue vpon Maiz or Ghiny-wheat: the number of which slaues is so great, that oftentimes they rebell, to the great domage of the Portugals. They haue good sustenance also by meanes of a root, called there Ighname, but in the west Indies Batata.79 Wheat that is heere sowen, groweth not to any ripenes or graine, but is resolued altogether into grasse. They make wine of the Palme-tree. Vines prosper nothing kindly in this place, except it be heere and there one, planted by an house-side, and attended with great diligence. They bring forth clusters at the same time, some ripe, some greene, and blossomes onley; and they beare fruit twice in the yeere, as doe the fig-trees likewise. They haue sugar-canes ripe all the yeere long: but melons onely in June, July, and August. No tree that beareth fruit with a stone or kernell will fructifie or prosper in this place. Here are found all over the Isle certaine crabs or creuises like unto them of the sea; heere be likewise gray parots, and infinite other birds of diuer sortes; and in the sea are mightie store of whales, especially toward the firme land. The principall riches of this isle consist in sugars, whereof there groweth great abundance. The sugar-canies are planted and cut euery moneth, and in flue months they grow to ripenes, but by reason of the moistnes of the ayer, they neither prooue hard nor white, but are of a reddish colour. The tenths

A DESCRIPTION OF PLACES
which belong to the king amount to the number of 12. or 14. thousand Arrouas, euery Arroua being one and thirtie Italian pound-weight.80 In times past there were fortie ships yeerely laden therewith: but now of late certaine worms which eat the roots of the canes, or (as others think) white antes or mice, haue so mightily impaired the growth of this commodity, that now there are not aboue sixe ships laden therewith. The sugar-canies, after they be once ground, they giue vnto their hoggges, wherewith they prooue at, and their flesh is very sauary. For returne of sugars, the merchants of Europe carry thither meale, wine, swordes, oile, cheese, hides, drinking glasses, and certaine shels, which there and in the countries adioining they vse instead of money. Of the conjunction betweene the men of Europe and the Negro women are bred a generation of browne or tawnie people.
This Isle of Saint Thomas together with the principal towne and castle, was in October 1599 taken by part of the same fleet of Hollanders, which not fullie foure moneths before had sacked the isles, castles and townes of Gran Canaria and Gomera.
Of the Isle delprincipe, and that of Fernando Po.
The Isle del principe81 or of the prince, situate in three
degrees of Northerly latitude, and one hundred twentie miles on this side the isle of Sant Thomas, is little in quantitie, but excellent in qualitie: for which cause it is thoroughly tilled and manured. The reueneus thereof (which consist the greatest part in sugars) were in times past allowed vnto the prince of Portugale; whereupon it was named The isle of the prince.

This Isle was in the yeere 1598 taken by certaine ships of war sent forth vnder the conduct of Iulianus Clerehagen at the charges of Balthasar Musheron of Camphere in

VNDESCRIBED BY IOHN LEO.

Zeland merchant, who had the conquest thereof giuen him by patent from Prince Maurice, and the States generall of the vnited prouinces.

That of Fernando Po' hath no other matter of speciall note, saue onely a certaine lake which is the originall of sundry freshets of sweete and holesome water, which make the island to be most pleasant. It seemeth so beautifull to the first discouerer thereof, that he termed it Ilha fermosa,8 or The faire isle.

To the west of these two isles are situate the isle of Sant Matthew, and that of Santa Cruz;84 and afterward hauing passed the Equinoctial, you come to the isle of Sant Paule,85 and the isle of conception, both which were discouered by Pedro Aluarez Cabral in the yeere 1501.

Of the isles of Cabo verde.

Next vnto Cape verde it selve stand The Barbacene86 which are seuen small isles replenished with greene trees, and full of strange birds vnknowne to vs; and yet are they vtterly voide of inhabitants. But those that are called the isles of Cape verde (which by ancient authors are thought to haue bin named Gorgones, or Gorgades, or Hesperides) are nine87 in number, and are situate betwene Cabo verde and Cabo blanco. They were first discouered by Antonio di Nolli a Genoway, and began in like sort to be peopled, in the yeere of our Lord i44o.88 Albeit there are none of them now inhabited, but onely the isle of Sant Iago,9 and Isla del fogo or The burning isle. The principall of them all is Sant Iago being seuentie miles This towne was taken by long, whereon the Portugals haue a faire and strong towne Sir Francis called Ribera grande, with a riuer running through it, and Drake byS5. a commodious and secure hauen: it is very strongly seated tkoie Skerley 1596.

A DESCRIPTION OF PLACES

leagues from the city) is beautified vpon the bankes thereof with Cedars, Orengetrees, and diuers other plants, amongst which the Palme tree of India that beareth nuts, prospereth exceeding well. The hearbes of Europe grow here as naturally as in their orignal soile; howbeit the seeds thereof must euery yeere be brought out of Spaine. The isle is generally vneuen and mountainous: but the valleis are passing fertile, and thorougly inhabited: and here is sowed abundance of rice and Saburro, which growth to ripenes in fortie daies. Howbeit the soile will beare no
wheat. Here is store of cotton also, the cloth whereof is dispersed along the coast of Africa. The sheegotes here, as likewise in all the isles adjacent, bring forth three and more kids at a birth, euery foure moneths. When the sunne is in Cancer, it raineth here in a manner without ceasing.

To the west of Sant Iago stand the isles of Fogo and Braua being but of small importance (albeit that of Fogo is in some parts thereof inhabited) and to the North of the same is situate the isle of Maio, where there is a lake of two leagues long, which is full of salt;91 the which is a common thing in all these islands; but in one, more then in any of the other, in that it is full of such like salt-pits, and is therefore called The island of salt, being destitute of all other liuing things, saue onely of wild gotes. The isle of Buena vista hath a name contrary to the quality; for it is without all shew of beauty. Of the others I haue nothing woorthie the obseruation.

VNDESCRIBED BY IOHN LEO.
Of the Isles of Arguin.
Little to the south or the backside of Cabo blanco, within a certaine gulfe or baie which entereth thirtie miles into the maine, lie the isles of Arguin, which were discouered in the yeere 1443,92 so called after the name of the principall of them, which hath great store of fresh water, whereof all the residue are destitute. Heere the king of Spaine hath a fortresse, for the traffique of gold and other rich commodities of those countries. These isles are sixe or seuen in number, all little ones, being inhabited by the Azanaghi, who Hue of fish, whereof there is plentie in that baie. They go to sea in certaine small botes which they call Almadies. The names of the other isles (as farre as I coniecture) are The isle of Penguins, The isles of Nar, Tider, and Adeget.

Of the Isles in the Atlantick Ocean, and first of the Canaries.
For so the isles named of olde Insulkfortunatce (which euer since the decay of the Romaine empire, till within these two hundred yeeres, lay vndiscoverued) are at this present called. They are in number twelue, (although the ancient writers make mention of but sixe) that is to say, Canaria, Lan~arotta, Fuerte ventura, Hierro, Palma, Gomera, Santa Clara, Isla de lobos, La Roca, Gratiosa, Alegraqqa, and Infierno. They generally abound with barly, sugar, hony, goates, cheese, hides, and Orche,98 being a herbe commodious to die cloth withall, and whereof they make great merchandise. Amongst other beasts they haue also camels. The natural inhabitants of the countrey are of a good disposition, and notable agilitie ; but before they G2

A DESCRIPTION OF PLACES
were discoverued, they were so grosse and rude, as they knewe not the vse of fire.94 They beleued in one creatour of the world, who punished the euill, and rewarded the good; and in this point they all consented, but in other matters they were very different. They had no iron at all, but yet esteemed it much when any came to their hands, for the vse thereof. They made no accofit of gold or siluer, judging it a folly to esteem of that mettal, which could not serue for mechanicall instruments. Their weapons were stones and staues. They shaved their heads
with certaine sharpe stones like to flint. The women would not willingly nurse
their owne children, but caused them to be suckled by goates. They were and are
at this day delighted with a kinde of dance which they use also in Spaine and in
other places, and because it tooke originall This isle from thence, it is called The
Canaries. From hence also with the prin- they bring certaine birds which sing at

by the
Hollanders in containing fower-score and ten miles in circuit, and it hath lune
Anno
1599. to the number of nine thousand inhabitants. Tenerif is

The Pikeof not altogether so great. This is esteemed one of the Tenerif highest
islands in the world, by reason of a mountaine
therein of the forme of a diamond, being (as it is reported) fifteene leagues
high,95 & it may be seene more then threescore leagues off. Hierro hath neither
spring nor well, but is miraculously furnished with water by a cloud which over-
spreadeth a tree, from whence distilleth so much moisture, as sufficeth both for
men and cattell. This cloud ariseth an hower or two before the sunne, and is
dissolued two howers after sunne rising. The water falleth into a ponde made at
the foote of the tree. The isle of Palma is little, but beautifull, and abundant in
sugar, wine, flesh, and cheese: wherefore such ships as go from Spaine to Terra
firma, and Brasil, do there ordinarily prouide themselves of fresh victuall. It is
from Lisbon a thousand miles by
100

VNDESCRIBED BY IOHN LEO.

sea, being much subject to tempests, and especially those which come from the
northwest.
Of these islands Lanqarota, Hierro, and Gomera are in the hands of priuate men:
the others belong to the crowne.

Of the Isles of Madera and of Puerto Santo.
M Adera is the greatest and most principall of all the Madera in Spanish signiisles
in the Atlantick Ocean. It standeth in twofiethwoodor and thirtie degrees and an
halfe, fortie miles to the southwest of Puerto santo. So it was called, because at
the first discouerie thereof it was all ouergrown with mightie thick woods.
Wherfore, to waste the said woods, and to make it fit to be manured, the first
discouerers set them on fire, which continued burning (as some report) for the
space of certaine yeeres together: whereupon it grew so
exceeding fertile, that of corne it yeeldeth sixtie folde for one: and for a certaine
space the fifte part of the sugars amounted to threescore thousand Arrouas (one of
which Arrouas containeth flue and twentie pounds of sixeene ounces the pound)
but now it cometh not to the one halfe of that reckoning. This isle containeth in
compass an hundred & sixtie miles. It is diuided into foure regions or quarters,
that is to say, Comerico, Santa Cruz, Funcioal, and Camara de los Lobos. It
aboundeth with water: and besides diuers and sundry fountaines, it hath eight
small riuers which make it as fruitfull and pleasant as a garden. It yeeldeth every
thing in such perfection, that Cadamosta (in regard of their excellency) affirmeth
all commodities which are there gathered, to be gold. It produceth infinite store of
fruits, excellent wines, and sugars which cannot be matched. Heere is likewise
great abundance of cedars, whereof are made fine chestes and other works of
account: for which purpose there are diuers sawing milles vpon the foresaid
rivers. This isle is

A DESCRIPTION OF PLACES
Puerto Santo, the principall towne whereof was taken by sir Amias Preston 1596.
The woonderful increase of one shee-conie.
very scarce of oile and of come. The head or principall citie hereof is Funciall,
being the seat of an archbishop who hath 8000. ducates of reuenue. Here are two
fortresses built which command the hauen.
Fortie miles to the northeast of Madera lieth the isle of Puerto santo, so called
because it was discouered vpon the day of all saints, in the yeere 1428. It
containeth in compasse fifteene miles, and aboundeth with oxen, wilde swine, and
honie, and yeeldeth wheat sufficient for the vse of the inhabitants. Heere groweth
a fruite in bignes and shape like vnvo to a cherry, but of a yellow colour. The tree
that beareth this fruit being cut neere the roote with certaine strokes of an hatchet,
putteth foorth the yeere following a kinde of gum    which is called Sanguis
Draconis.96
The generation of one shee-cony bigge with yoong, brought hither out of
Portugale at the first inhabiting of this isle, did in short time so exceedingly
increase, that the inhabitants were quite out of hope euer to repair the ruine and
waste which they committed. At this present there is a small isle neere vnto
Puerto santo which breedeth nothing but conies.
Vnto all these might be added such isles as lie neere the African coast within the
streights of Gibraltar : the principall whereof (as namely Pennon or The little
rocke ouer against Velles de Gumera, with the isle of Gerbi, &c.) because they are
largely described by iohn Leo, I hold it a matter meerely vaine and superfluous in
this place to stande vpon them.
102

VNDESCRIBED BY IOHN LEO.
An app robation of the istorie ensuing, by me
RICHARD HAKLVYT.
Eing mooued to publish mine opinion as
Ptouching this present Historie of John 6 Leo; I do hold and affirme it to
be
the verie best, the most particular, and methodicall, that euer was written, or at
least that hath come to light, concerning the countries, peoples, and affairs of
Africa. For which cause, and knowing well the sufficiencie of the translator, my
selfe was the first and onely man that perswaded him to take it in hand. Wherein
how diligently and faithfully he hath done his part, and how he hath enlarged and
graced this Geographicall historie out of others, the best ancient and moderne
writers, by adding a description of all those African maine lands and isles, and
other matters verie notable, which John Leo himselfe hath omitted: I referre to the consideration of all judicall and indifferent Readers.

Richard Hakluyt.

V Nto this approbation of master Richard Hakluyt, I holde it not altogither amisse to adioine the testimonies of certayne moderne writers, the most approoued and famous for their skill in Geographie and historie, which they haue also purposely set downe in commendation of this author of ours John Leo. First therefore master John Baptista Ramusius, Secretarie to the State of Venice, and a man of singular judgement and diligence in these matters, in his epistle Dedicatorie before the third edition of his first volume of voiages, speaking of the manifold difficulties which he

APPROBATION OF THIS HISTORIE underwent to bring the important discourses therein, to light, writtet h vnto learned Fracastorius in manner following. Otra eke gli esemplari eke mison venute alle mani, &c. M Oreouer (faith he) those copies which haue come to my hands, haue been extremely fowle and vncorrect; a matter sufficent to discourge the minde of any man, though neuer so forward and resolute, were it not sustained by considering what vspeakeable delight these discou rses will breed vnto all those that are studious in Geography; and most especially this of Africa written by John Leo. Concerning which part of the world, euen till these our daies, we haue had no knowledge in a manner out of any other authour, or at leastwise neuer any information so large, and of so vndoubted truth. But what do I heere speake of the delight which those that are learned and studious shall reape heereby? As though it were not a matter which will affoord also very much satisfaction vnto the greatest Lords and Princes? Whom it concerneth more then any other to know the secrets and particularities of this African part of the world, together with the situations of all the regions, prouinces, and cities thereof, and the dependences, which the princes and people haue one towards another. For albeit they may haue some aduertisements and instructions from others that haue personally trauailed these countries, & may think their writings & discourses to be very large; yet I am well assured, that hauing once read this booke of John Leo, and throughly considered the matters therein contained and declared, they will esteeme the relations of all others, in comparison of this, to be but briefe, vnperfect, and of little moment: so great will be the fruit which to their exceeding contentment, all readers shall reape heereby, &c. Thus farre Ramusius.

BY RICHARD HAKLUYT AND OTHERS.
Abraham Ortelius before his generall mappe of Africa hath these wordes.

Ex recentioribus, &c.
A Mong the late writers (for your more perfect knowledge of Africa) you must
read Aloisius Cadamosta, Vasco da Gama, and Francis Aluarez, who trauailed
Ethiopia; Sed omnium accuratissime &c. but of all others you haue it most exactly
described by John Leo.
Also the same author before his map of Barbary and Biledulgerid.
B Vt (saith he) concerning these regions and people, you
shall finde a most exquisite description in the Historie of John Leo, &c.
The opinion of IOHN BODIN in the fourth chapter of his method of reading
Histories
concerning this our author.
Ira quoque Leo Afer, genere Maurus, &c.
O likewise Leo Afer by descent a More, borne in
Spaine, in religion a Mahumetan, and afterward a Christian, hauing by continuall
iournies trauelled almost ouer all Africa; as also ouer all Asia minor, and a good
part of Europe, was taken by certaine pirates, and presented vnnto pope Leo the
tenth: vnder whom he translated into Italian all those things which with incredible
studie and diligence he had written in the Arabick toong, concerning Africa, the
manners, lawes, and customes of the African people, and the situation and true
description of the whole countrey. Their militarie discipline he lightly

APPROBATION OF THIS HISTORIE.
passeth ouer: and briefly mentioneth the conflicts and victories of famous
warriours, without any orations or ornaments of speech, rather like a Geographer
then a Chronicler: and with a perpetuall delight of new and strange things, he doth
(as it were) perforce detaine his Reader, &c. And a little after he addeth: Profecto
vnus est ex omnibus, &c. Certes of all others this is the onely man, by whom
Africa, which for a thousand yeeres before had lien buried in the barbarous and
grosse ignorance of our people, is now plainly discouered and laide open to the
view of all beholders.
Antonius Posseuinus de historicis sect. 7. cap. 2.
Sed & perdignaest lectu, &c.
ALso the Historie of Leo Afer the Geographer is most
worthie to be read, bicause it containeth an exact description of all the regions and
people of Africa; and it hath beene published in Italian and French.
iO6

NOTES TO PORY’S PREFACE, GENERALL DESCRIPTION, ETC.
(i) Timbuktu.
(2) See Introduction.
(3) See Introduction. Pory exaggerates the number of translations.
(4) Most of the maps up to a very recent time have had Leo's names and positions
inscribed on them.
(5) Zaga or Tsaga Za-ab, "the Grace of the Father", accompanied the Portuguese
Embassy, the principal members of whom were Dom Rodriguez de Lima; Father
Francisco Alvarez, who wrote the work to which Pory refers, and Jo~o Bermudez,
the physician and secretary. The Envoy returned to Lisbon in 1526. Bermudez
was, however, detained by the Negfis.-Markham, The Abyssinian Expedition, p. 17.

(6) "Os picos fragosos, cia le punte aspere." This phrase does not, however, refer to any particular mountains: but from the context may have been suggested by the Lange Berg, the Langkloof Berg, and other ranges of the East Coast north of Cape Agulhas (or Hagulhas, as De Barros spells the name) and south of Zanzibar, his narrative being very brief.

(7) There is no mountain in this part of Africa fit to be called Ocrov "Oxqlua, the "Chariot of the Gods". Ptolemy more accurately places it near the site of the Cameroons Peak.

(8) The "Mountains of the Moon" in the older maps figuring as a range extending across the continent from Abyssinia to the Gulf of Guinea, and then after vanishing from this position to re-appear in Abyssinia, in Kenia and Kilimanjaro, and in the so-called Kong Mountains, have been strenuously claimed by Mr. Stanley as Ruwenzori. This theory has quite as little in its favour as the previous ones, and is not even supported by the old maps adduced in proof by its originator. Peters considers that they are the crescent-shaped range in Unyamwezi, or the "Land of the Moon"; and Baumann is quite convinced that he has discovered them in the precipitous wooded hills.

NOTES TO PORY’S PREFACE,

(9) The lake which plays so large a part in all maps up to the era of the discoveries of Burton, Speke, and Livingstone, was doubtless a vague embodiment of floating tales about Nyassa, or the lake out of which the Zambesi flowed, the Shire branch being taken as the main river. "Zembere" or "Zambre" is likely enough a corruption of "Zambesi". But none of the early authorities (De Encisco, De Barros, Do Couto, Pigafetta, Dos Santos, gave any name to the lake.-Cooley, Inner Africa Laid Ofien, pp. 65 et seq.

(io) All this is, of course, now very ancient geography, though, until the contrary was demonstrated, Baker insisted on Tanganyika being a Nile source, and to the last day of his life, Livingstone was searching for some Nile tributary, as we now know, far outside the Nile Basin. The speculations of the ancient geographers were therefore by no means more wide of the mark than those of the modern before the hydrography of Central Africa was elucidated, if, indeed, they were not more reasonable.

(ii) The Mauri—or Moors—were the Berbers. The Spanish term, Al Arabes, is indifferently applied to them and the Arabs. "Mori" is the more common appellation.
(12) Outside the Strait of Bab el mandeb, or "Straits of Mecca", neither Strabo nor the Ptolemies knew much. If the legend has even a semblance of truth, it refers more likely to the Gulf of Suez. The "Isle of Babelmandeb" is Perim.
(13) The term Troglodytm was applied by Agatharchides of Cnidus (cir. 115 B.C.), who was tutor to Ptolemy Sotor II, to the people inhabiting the mountains bordering the western side of the Red Sea, at some distance in the interior, from their living in caves, and the term Troglodytic Coast to the western shore. Though less barbarous than the Ichthyophagi of the littoral, they went almost naked, and had wives in common, put to death the infirm and aged, and drank the blood and milk and ate the flesh of their extensive herds of cattle. Weeded of the customary amount of fable, these people were perhaps the ancestors of the present Arabised tribes.
108

GENERALL DESCRIPTION, ETC.

(14) Grbdol, Ghorondol, Chorondol, as variously spelled; Jebel Attak is not now a harbour, but was long a favourite among the many places identified as the point from which the Children of Israel crossed the Red Sea.
(15) Kosseir, Chosair, Chossir.
(16) Suakin, Suakem, Zuaquin, Suaquen.
(17) Arkiko.
(18) Massuah, the Matzua of the early Portuguese invaders under Christovdo da Gama in 1542.
(19) "John Leon and Sanutus after him, esteems Dancala or Dangala, the chief of the Kingdom 'of Nubia' seated on the Nile."Blome, A Geographical Description, etc., Affrica, p. 52. But here there seems a confusion. For Leo's "Dangala" (Book vii) is evidently the modern Dongola, while Dancala or Dancali, with its Red Sea port of Vela (Asah?), is the Danakul or Adal country. The anonymous compiler of the map attached to Pory's translation marks both " Dangala" and" Dagale". In Sanson's map (1656), of which Blome's it a copy "rendered into English", " Dancala" is placed on the Nile, and Dangali near the Red Sea, between "Arquico" and "Zeila".
(20) Cairo.
(21) As will be seen in due course, this powerful kingdom first mentioned by Leo is what the Bornu people call Bulala.
(22) Libyan Desert. "Gorham is on the Nile and on the coast of the Isle Gueguere. Sanutus makes a Kingdom, a Desert, and a People of this name, and extends them almost the length of the Isle Gueguere : not making any mention of the City of this name, nor John Leon of Affrica, nor the A rab of Nubia [Edrisi], nor Vincent Blanck, who saith he has been in these quarters, and speaks only of the Desert of Gorham. Other authors make mention of this City, and describe it on the Nile. Sanutus saith that there are Emeralds in these mountains, which bounds Gorham on the South."-Richard Blome, A Geog. Description of the Four Parts of the World (1670), Affrica, p. 52. " Gorham" or " Gorhan" is clearly Kordofan.
Gueguere, or Guengare, is Merofi (Pory, ut supra), which is not an island proper, though so called by all writers who blindly followed the assumptions of Ptolemy.
Merofi, the only town near, is small and of no importance. It is on the right bank of the river. Here camels are got for crossing the Bahida Desert to Berber. There are, however, remains of two temples at Jebel Barkal, and pyramids at Dankelah, which may account for the legend.

NOTES TO PORY’S PREFACE,

(23) Santalum album—but not really a native of Africa.
(24) Godjam, a province south of Lake Dembea.
(25) The Anzichi were understood to inhabit the Anziko country on the Zaire or Congo opposite Sundi. Their capital was Monsol, which D’Anville placed fully 700 miles from what must have been its true position. Anziko and all its derivations mean simply people of the interior, and Anzichi, or rather Nsek6, "inland" (Stanley, Congo, vol. i, p. 3). Father Girolamo de Montesarchio describes a journey which he made to "Cancobella", a town on the Congo, tributary to the Micoco, a King of the Anziko (Cavazzi de Montecucclo, Istoria Relattione de Tre Regni, etc., 1690, p. 408).
(26) Dembea, or Tzana, most likely. But geographical names were so transmogrified by the old historians and travellers, and, worse still, so embodied in fables, that it is now almost useless to try and trace many of them. Shoa, Amhara, etc., are easily brought into line with modern knowledge. But "Tigremahon" was not a "Kingdome" at all. It was the name of a chief who took charge of the wounded in the battle which Dom Christovão da Gama (a grandson of Vasco da Gama) fought in 1541 not far from Debra Damo in Tigre. Tigre-Maquanen is still the title of the chief of a district near Senafé.-Markham, Abyssinian Expedition, pp. 24, 25.
(27) The Sinus Barbaricus of Ptolemy was south of the equator and north of lat. IO S. About the centre of the supposed bay was the mouth of Rhaptus fluvius, which Dr. Schlichter (Proc. R. G. S., 1891, p. 525) identifies with the river Pangani.
(28) The absurd blunders of the old geographers regarding distances, make the Kingdom of Abyssinia, "Monomotapa", and Congo meet in the centre of the continent. Hence we find the Abyssinian name Bagamidr persistently clinging to the upper course of the Kwango. Possibly, a confused echo of the Kingdom of Bagirimi had reached the coast.
(29) The great Salt plain, described by Alfonso Mendez and Father Lobo, is near the River Ragolay, in a desert country about fifty miles from the sea, in a southerly direction from Mulkutto.
(30) Bernagasso (or Baharnagash) was only a Ras or Governor under the Negus. His district is now mainly that held by the Italians. This account is from Álvarez.
(31) The Doba Valley is in the Azebo Galla country. The term "Moore", it will be noticed, is used by Pory, like the other writers of his time, to describe any Mohammedans not white or Negroes. Even then he qualifies it by speaking of "Tawnie Moores".

(32) This inflated account Cooley considers refers to Munha Munge, "Lord of the World", who in 1503 helped Agi Hocen (Haji Hussein), King of Kilwa, to destroy a hostile neighbour. Hence Monemoezi, Muenhe Muge, Moenemugi, Mohenemugi, or Monomugi, of writers subsequent to De Barros, who gives the first account of him (Decade IX, fol. 207, Botero, Della Relationi Universali, 1592, p. 310.) It is difficult to decide at this date how far these descriptions were fact and how far fancy. The latter is probably nearer the reality; for most frequently when we have had an opportunity of comparing the early Portuguese and other descriptions with the actual people and spots, the "mighty Emperors" of the Navigators, anxious to rival Cortes and Pizarro, dwindle down to petty chiefs and the "great cities" to squalid villages.

(33) Cambay (Khammad) the port and capital of a small Indian feudatory state of Bombay, at the head of the Gulf of Cambay, now fallen from its ancient magnificence by the gradual obstruction of its seaward navigation and commerce.

(34) The "Empire of Monomotapa", which has occupied so large a place up to a very recent date in the works of historians—who seemed to have derived their information largely from this summary of De Barros—was from the outset based on a misreading of that chronicler. In reality, there was no such "Empire". Benomotapa, or Monomotapa, was "a pagan prince" who ruled "all the land which we include in the kingdom of Sofala", a name now applied to a Portuguese province in East Africa. "This prince, whom we call Benomotapa or Monomotapa, is with us an emperor, for this is the meaning of his name amongst them." Whichever title is used (and all earlier writers, e.g., Barbarosa and Camoens use the first) the meaning is the same, namely, "príncipe", "emperador", prince or emperor; the initial syllable, Bena and Mono, being ordinary Bantu words answering to our chief, lord, master, etc. The second part, motafa, has not been so satisfactorily explained; but Mr. Keane (Murray's South Africa, p. 19), suggests that it may mean "mine", from the root ta1pa=to excavate or extract. Hence "Lord of the Mines" was not an inappropriate title for the ruler of an auriferous region, equivalent to Manica and Mashonolands. Mr. Baines (Gold Regions of SouthEastern Africa, p. i) is rather loose in his etymology when he translates Monomotapa as "a place whence something valuable is derived". For it is not a place at all, and was far less an "empire", but "Príncipe gentio chamado Benomotipa" of "o reyno de Cofala'. Yet, even Livingstone (Missionary Travels, ch. xx) is dubiously correct in deriving the word from a corruption of the title and name of a chief Mhwene Motape, and for three centuries geographers argued about and politicians founded claims upon the position of an "Empire" which never had any existence, as might have been discovered had they referred to the original authorities. Burton, generally reckless in his literary iconaclism, also comes under this censure ("Lake Regions of Central Equatorial Africa", Jour. R. G. S., vol. xxix, pp. 166, 214, 347).

(35) This note is taken by Pory from De Barros; but it will not bear sifting. Ptolemy's Agysymba (Agizymba) was not a "city", but regio AEtkiobum latissime
extensa, south of the "Lunae Montes", through which the Greek geographer drew
the thirtieth meridian east of Greenwich—the longitude of Alexandria.

(36) Dos Santos tells us that there are days on which they do not work. These
they call " Mozimos, or days of the holy who are already dead". Mr. Bent (who by
an oversight quotes Leo when it is Pory's abstract he is referring to) mentions that
the term Mozimo for the spirits of ancestors is still used in many parts of the
country, and has been compared with the term molimo used by the Bechuana for
the Supreme Being. N. N. Gravenbroek (Gentes Africanæ, MS. in Sunderland
Library), also writing in 1695, states, "Divinitatem aliquam Messimo dictam in
lucis summo cultu venerantur." The day of rest is kept only during the ploughing
season (Bent, Ruined Cities of Mashonoland, p. 300 ; Santos's Hist. de l'Ethiopie
Orientale, trad. par Charpy, 1684).

(37) Butua and Toroa have given geographers about as much trouble as the
"Empire of Monomatapa". On Pigafetta's map (1519) they figure as two distinct
territories, the former south of, the latter west of, Manhica (Manica), with
Zimbaboe (Zimbabwe) between them. (Relazione del Reaume di Congo, et della
Cirionvicine contrade, 1591 ; Le Congo, traduite en franqaise par Cahun, 1883:
Keane, in Murray's South Africa, p. 13.)

(38) Mr. Bent (Lib. cit. p. 205) quotes this passage, in mistake, from Leo
Africanus. De Barros gives the position of Zimbabwe very nearly correct, though
the early writers were extremely vague as to distances. But instead of 5 10 miles,
the distance should be 640 miles (170 leagues), which is too far west of Sofala by
nearly 400 miles, accepting the Portuguese league as equal to 3.87 miles (Keane).
Pory seems to have taken it roughly at three miles.

(39) Baretto's expedition was actually much smaller; and it was sent quite as
much to explore the gold deposits, which from sickness, opposition of the natives,
and hardships, the adventurers never reached.

112

GENERALL DESCRIPTION, ETC.

113

(40) The " Sweet River" by no means " mightie". " Lake Gale" is a myth.

(41) Thomas Cavendish, who, eight years before Pory published this work, had
died brokenhearted at the failure of his second expedition to the Pacific. The
variant "Candish" in spelling his name is worth noting.

(42) Sir James Lancaster, after whom Lancaster Sound, off Baffin's Bay, was
named. He visited (after being a soldier and merchant in Portugal) the East Indies
on his own account in 1591-94, and in 1594 captured Pernambuco in Brazil. He
was knighted in 1604, on returning from leading the first fleet of the East India
Company to India. But this was after Pory wrote. (Markham, Voyages of Sir
James Lancaster, Hakluyt Society, 1877.)

(43) Table Mountain.

(44) Another semi-mythical "kingdome" of Central Africa, made up of traders'
gossip and the half-understood chatter of slaves. Matoma or Matama is, however,
still a Congo Chief's name.

(45) This was in 1578.
(46) The source of the Quanza, or Coanza, is still unknown.
(47) From the earliest time these Cabambe mines have been rumoured to exist, though without any basis more definite than that the natives of that district paid tribute to the Portuguese in silver, and that the King of Angola gave Paulo Diaz, in return for Dom Sebastian's presents, several armlets of silver and copper. The silver was made into a chalice for the Church of Belem at Lisbon (Monteiro, Angola and the River Congo, vol. i, p. 4; vol. ii, p. 62). The mines have never yet been re-discovered.
(48) The tamed hippopotamus (even with the inconvenient habit of its suddenly reverting to savagedom) must, we are afraid, be attributed to the old historian's credulity. Gordon Cumming's involuntary tour by one on the Limpopo is about the nearest approach to this use of the "river horse". But, in spite of the grotesque language in which they are described, the other animals are realities. The "kinde of oxen, that Ibe every night vpon the lande", are simply "sea cows", or Manatees described, without any further knowledge of them than their absurd popular name. One species (Manatus Senegalensis or Vogelli) is-or was-not uncommon in the rivers of West or East Africa. Manatee Island, near Sea Horse Point on the Congo, commemorates this fact. It has also been reported to frequent Lake Chad, and was suspected by Schweinfurth (from native reports) to

NOTES TO PORY’S PREFACE,

inhabit the River Keebaly, a distant tributary of the Nile, in long. 270 E. (Heart of Africa, vol. ii, p. 96). The "hogge fish" is evidently a cetacean, either one of the marine species or a riverine form, allied, most probably, to the inia geoffirensis or Pontoporia blainvillii of the Amazon, La Plata, and other South American rivers. Such an animal has been frequently seen in the Niger, and Mr. Johnston especially notes that not only the manatee, but "a species of river dolphin, is occasionally found in the Lower Congo and about the estuary. I have seen a skull alleged to belong to it." (The River Congo, p. 379.)
(49) The zebra is no longer an animal of the Congo country. The "buffle" (buffalo) of the river region is Bubalis brachyceros, as fierce, but not as big, as the species found in Central and South Africa. But it is more than doubtful if a wild ass ever existed in that region, the only African species (A. tceioifius) being confined to Abyssinia. The "tiger" is, of course, a leopard. The "gugelle" is evidently the gazelle. "Dante" is an animal referred to by Leo, from whose pages Pory takes its name.
(50) Sdo Paolo de Loanda is not built on the long sandy island which protects the harbour from the Atlantic surf, but on the mainland. The water-supply is still the great drawback to the place. The money-shell referred to is the cowry (Cyihra’a moneta). In the palmy days of the trade in human flesh, as many as 90,000 or io0,000 slaves were shipped here annually, and not many years ago a marble arm-chair stood on the custom-house wharf, in which the bishop sat, while baptizing and blessing the batches of negroes, as they were despatched by the bargeful to the vessels anchored off shore.
The elephant is no longer one of the animals of Loango. The coast-people call themselves Bapote, not "Bramas". Near Chinchoxo a tribe (the Mavambu, or Umvambu) are known to the Europeans as "Black Jews", on account of their Semitic features.-Bastian, Die Deutsche Expedition an der Loango Kuste, 1847-75.

"Anzichi", we have seen, is simply a general term for the interior (p. 30). In this case, the reference to copper mines may indicate Katanga. "Red and grey Sanders" are, however, not natives of any part of Africa. Either these plants had been incorrectly identified, or the drugs' country of origin not correctly ascertained, being set down to Africa simply because a ship most recently from that coast brought them to England. "White Sanders," or sandalwood (Santalum album), is the produce of a small tree growing on the mountains of Southern India and in the Indian archipelago. Its export is a Government monopoly, the wood being valuable for the oil, formaking a pigment used by the Brahmins for distinguishing caste marks, for

**GENERALL DESCRIPTION, ETC.**

incense, etc. The white or grey and the yellow Sanders are different parts of the same tree. But neither possesses much medicinal value. "Red Sanders" is the produce of another small tree (Pterocarpius santalinus) of Southern India and other parts of tropical Asia. It is mainly used as dye-stuff, an astringent, and as the basis of some tooth-powders. "Lignum aquile" is one of the trade-names applied to the wood of Aquilaria malaccensis, Linn., also so inappropriately called "Aloes Wood". But it does not come from Africa, but from Malacca. At one time it enjoyed a great reputation as a stimulant, and even as a remedy in epilepsy and apoplexy.

(53) On this animal I shall have something to say in the note to Leo's Bk. ix. "Dante" is not a "German" or a "Greek" term (p. 76).

(54) Now corrupted into "Cape Lopez". It is about thirty-two miles south of the Equator.

(55) Now corrupted into Cameroons, which the Germans have Teutonis'd into Kamerun, in entire ignorance of its original form and meaning.

(56) Retort of the Kingdom of Congo, a Region of Africa and of the Countries that border round about the same, drawen out of the writings and discourses of Odoardo Lopiez, a Portingall, translated by Abraham Hartwell, 4to, 1597. Lopez left Portugal in 1578, and after some years spent in Africa, returned to Europe with a mission from the King of Congo to the King of Spain. Philip was, however, at that date engaged in fitting out the Spanish Armada, so that Lopez, disappointed with the little attention shown him, went to Rome, where the Pope received him favourably. He dictated his narrative to Pigafetta, who wrote it in Italian, and printed it at Rome in 1591. Hence, the italicising of the names of this part of Africa, Pigafetta's narrative being the authority from which Pory (in whose day it was a new book) and other authors copied. Lopez collected most of the floating legends about the African lakes, etc. Mrs. Hutchinson reEnglished the book in 1884.
In the seventeenth century, the Kingdom of Benin seems to have been one of the most powerful in West Africa. Badagry and Lagos were both colonies from it, and several states, independent until they came under British rule or protection, comprised within its limits. "Gurte" or Gwato (also called Gato, Agatho, or Agatton), about thirty miles N.N.E. of the mouth of the Benin River, is still a port of some importance for the palm-oil trade, which in 1600 had not begun. Guinea pepper, or Malaguetta (Malagheta, Meleghite, Meleuguetta, etc.) pepper, is in modern times generally accounted equivalent to the Grains of Paradise (Amomum Grana Paradisi), which is referred to in the next paragraph. But the name is also applied to the dried fruits of Cubebs Clusii, and the seeds of Habzelia tEthiopica. The capsules of Cafisicum frutescens are likewise sold under that designation, and it is evidently capsicum that Pory alludes to as "long pepper". The "Grain" or "Pepper Coast" perpetuates the memory of the trade done in these spices.

(58) Pliny (lib. vi, 32, §§ 201, 203, 204) describes the land of Autololes as opposite the Purpurariae Islands discovered by Juba, who established on one of them a factory for dyeing the Goetuiian purple. If these islands were, as is generally supposed, the two easternmost Canaries, the Autololes coast was that of the Sahara. Jinni, Ginnie, Genna, or Jinnie, was founded in A.D. 1043-4 (A.H. 435), and was well known by that name as early as 1351. The boundaries of the Guinea district with which the Niger town, from which it takes its name, had never much to do, have always been very vague; but, in general terms, the Guinea Coast, until the European colonies got established, may be taken as equivalent to tropical West Africa.

(59) Senegal. This belief in the Senegal and Gambia being the mouths of the Niger held its place, not unreasonably, until late in last century, while the lake origin of the Senegal was akin to the persistent notion that all the great African rivers had their source in such sheets, a legend which perhaps was due to the traders mistaking the negroes' expression for lake, and water, river, and village, or, possibly, to the indiscreet prompting of the uninterested savages. The "mightie cataract" seems to refer to the Felu Falls, where navigation is interrupted by a ledge of rock across the river's bed. The Isle of Elephants is Morfil. Even in Brue's day (1697), herds of forty or fifty elephants wandered quite peacefully on the island.

NOTES TO PORY'S PREFACE,
to in the next paragraph. But the name is also applied to the dried fruits of Cubebs Clusii, and the seeds of Habzelia tEthiopica. The capsules of Cafisicum frutescens are likewise sold under that designation, and it is evidently capsicum that Pory alludes to as "long pepper". The "Grain" or "Pepper Coast" perpetuates the memory of the trade done in these spices.

(58) Pliny (lib. vi, 32, §§ 201, 203, 204) describes the land of Autololes as opposite the Purpurariae Islands discovered by Juba, who established on one of them a factory for dyeing the Goetuiian purple. If these islands were, as is generally supposed, the two easternmost Canaries, the Autololes coast was that of the Sahara. Jinni, Ginnie, Genna, or Jinnie, was founded in A.D. 1043-4 (A.H. 435), and was well known by that name as early as 1351. The boundaries of the Guinea district with which the Niger town, from which it takes its name, had never much to do, have always been very vague; but, in general terms, the Guinea Coast, until the European colonies got established, may be taken as equivalent to tropical West Africa.

(59) Senegal. This belief in the Senegal and Gambia being the mouths of the Niger held its place, not unreasonably, until late in last century, while the lake origin of the Senegal was akin to the persistent notion that all the great African rivers had their source in such sheets, a legend which perhaps was due to the traders mistaking the negroes' expression for lake, and water, river, and village, or, possibly, to the indiscreet prompting of the uninterested savages. The "mightie cataract" seems to refer to the Felu Falls, where navigation is interrupted by a ledge of rock across the river's bed. The Isle of Elephants is Morfil. Even in Brue's day (1697), herds of forty or fifty elephants wandered quite peacefully on the island.

(60) Joloffs, or Woloffs. (61) Turucols.
(62) Serawallies. (63) Bagnas.
(64) This town has never been identified in accordance with the report of the Arabs, Berbers and Tuaregs, imperfectly understood by Ca da Mosto. But so convinced were the Portuguese of its existence, that they sent an expedition from Arguin to found a factory at Hodem or Huadim ; though it does not appear that they ever reached a spot corresponding to the description. Until recently, however, the name appeared on maps by such authority as Rennells', illustrating Horneman's journal of Travels from Cairo to Mourzouk (1802, p. 158). No such place exists where it was previously placed, and up, to date its actuality has either
been scouted or forgotten. There is, however, great probability of its being the plateau of "El Hodh", due

GEN ERALL DESCRTPTION, ETC.
west of Timbuktu, on which is Walata (Oulata), a town in the Desert reached in
1860 by Alioun Sal, an Arab officer in the French service, on his journey to
Aruan, from Podor on the Senegal. According to his account it was a much more
important centre than Aruan, and a somewhat busy rendezvous for traders from
that town and Timbuktu on their way to the Sudan and Barbary. This entirely
agrees with Ca da Mosto's description of it being a rendezvous for caravans
engaged in the traffic. The salt mines of " Tegazzi" (Ca da Mosto in Ramusia, Ed.
1613, vol. i, 1oo a, and Leo, Bk. vi, sub zoce " Tegaza") may refer to several
places in the Desert dealing in salt. Aruan, for instance, does a large business in
this commodity. Taudeni, when Mordokhai Abi-Serour visited it, was in ruins;
but what trade was carried on by the few people who lived in the tumble-down
Arab houses was in salt, of which formerly thousands of camel loads were
annually sent to Timbuktu. When Lenz arrived here twelve years later, he found
the place entirely deserted.
(65) Sahara.
(66) This is the modern Perim, the Jezirat al Maiyun of the Arabs.
(67) Close to Ras el Bayath.
(68) Dhalac, in the Dhalac Archipelago.
(69) Massowah. (70) Suakim.
(71) Except in reverence of the cross, the Nestorian form of Christianity adopted
by the Mahra settlers from the opposite Arabian coast in the sixth century has now
been almost entirely lost. Even the legends, that usually last longer than the
substance to which they cling, have vanished.
(72) The history of the names applied to the islands off East Africa would form
an instructive essay on the vicissitudes of geographical nomenclature. Portuguese
has suffered sadly in the mouths of foreign seamen-Englishmen more especially.
But Arabic has been still more mangled by the Lusitanian mariners and the map-
makers, until even the few places mentioned by Pory are now difficult to extricate
from the general confusion. As a specimen of the metamorphoses which an Arab
name has undergone, the island of Aldabra may be cited. On some charts it is
changed into Albadra, and on the great Mappemonde of Cabot it is written
Alhadara, though it is evidently the Arabic Al-Khadhrl, or the Green, which in
time has come to be applied to the familiar Pemba, Penba, or Panda. In
seventeenthcentury charts we have the island of Adarno. On the maps of Ortelius
it becomes Darea, and in the Spanish chart of Diego Ribero (1529) we trace it
back to I. :c ArUna, thugh doubtless it "as origui.ally and

NOTES TO PORY'S PREFACE,
very properly designated Ilha da Area, Sandy Isle. The Amirantes were originally
the Ilhas do Almirante-the Admiral's Islands, Vasco da Gama having met with
them in 1502 on his second voyage from Melinda to Cananor. The Mascarenes
are a corruption of the name of Pero de Mascarenbas, one of the companions of Vasco da Gama; and the Sete Irmãos, or Seven Sisters, have become the Seychelles.

The Galician, Juan de Nova, was commemorated in an island (A Galega) now bearing his name, though a cluster of islands called Juan de Nova were formerly known as "A doze ilhas". But more to the east, north of Madagascar, south of isle of Cosmo Ledo (Cosmoledo), is another isle called Astov, which is a corruption of "A doze ilhas". Again, the island of A Galega (Agalega) was discovered by De Nova in 1501, and named in allusion to his Galician nationality. Cosmo Ledo preserves the name of a Portuguese sailor. 0 Cerne, the name of a Portuguese family, was first applied to Mauritius, but on Diego Ribero's map it figures as Santa Apollonia, by which name it seems to have been known in Pory's day. Rodriguez (probably Diogo Rodrigues, or Diogo Roys, if abbreviated), is on the same chart Domingos Fernandes, replaced in those of Ortelius and Mercator by Don Galopes, under which barbarous transformation we recognise Diogo Lopes de Sequeira, the fifth Governor of Portuguese East India (1518-1521). Pero dos Banhos is corrupted into Peros Banhos, two shoals, one near the Amirantes, and a second in the Chagos Archipelago, south of the Maldives. Roque Pires is changed into Roquepiz, and under Antonioil (p. 91), we detect the name of Antdo Gonqalves. Cargados-Garajos, or simply Cargados, is Coroa dos GarajAos, or the sand bank on which the Garajo (a common sea fowl) collects (D'Avezac, Isles dAfrique, Troisieme Partie, pp. iI-iv). St. Christopher is an old name for Mayotta, and Spirito Santo for Johanna Isle, so forth.

(76) The elephant is not a Madagascar animal, and the camel is equally absent.

(77) Antongil Bay, north of St. Mary's Isle (see note 72).

(78) Ilha de Gonqalo Alvarez, sometimes corrupted into Albarez, now called Gough Island after Capt. Gough, who, in 1713, rediscovered it, though it was not for a century later that his island was recognised as identical with the one erroneously put on charts as Diego Alvarez.

(79) These might be the yam (Dioscorea sativa), or the sweet potato (Batatas edulis), still sometimes confounded with the former plant. The latter supposition is most probably true, not only from Pory but from the fact that Pigafetta had only recently called attention to it as an article of food among the Brazilian Indians. The true potato, which does not grow in Sao Thome, was then almost unknown in England, though Raleigh had introduced it from Virginia, a few years before Pory wrote. The plants brought by Hawkins from Santa Fe in 1563 were, apparently, sweet potatoes, which for many years subsequently were confounded with the "Batata Virginiana sive Virginianorum et Pappus, Potatoes of Virginia", as they are described in Gerard's Herbal (1599).

(80) An arroba is now twenty-five pints : liquid measure thirty-one pints English.

(81) Ilha do Principe.
(82) Originally Ferno do Poo, from its Portuguese discoverer. In Spanish his name, and the name of the island when it fell to Spain, was literally translated Fernando del Polvo, which in time became Fernan-do-P6, still further abbreviated into Fernando-P6, the usual foreign form of the word, though in some French works the much-suffering mariner and his island have become Fernand d'O-P6. The "certaine lake" is non-existent, so far as present information extends, though it is quite possible it lies on some of the valleys of the mountainous interior, which rises to over 9,000 feet, and gives origin to endless torrents.

(83) Ilha formosa, in 1471.

(84) St. Matthew and Santa Cruz are now classed among the imaginary isles of the Atlantic. The first was reported in 1525 by the Friar Garcia de Loaysa, on his way to the Moluccas with a squadron of seven ships sent by Charles V. Possibly he mistook Annobon for it, and the description he gave is not unapplicable to that island. Santa Croce, Santa-Crosse, or Santa Cruz, appears on sixteenth-century charts about 200 leagues west of St. Matthew; but that is the extent of our knowledge regarding this mythical spot, which if it ever existed has long since sunk into the ocean.

(85) St. Paul, or the Penedo (that is Rock) of San Pedro, is in reality 53' north of the Equator. It was discovered by Dom Garcia de Noronha in 1511, and received its alternative name from the São Pedro, one of his squadron, commanded by George de Brito. But the "Isle of Conception" (Santa Maria d'Agosto ?), was not discovered by Pedro Alvarenga Cabral or anyone else.

(86) The Bird, Magdalen, or Beshitten Islands.

NOTES TO PORY'S PREFACE,

(87) Thirteen, all told.

(88) The Cape Verd Islands were certainly not known to the Ancients—the Gorgones being the Canaries, and the Hesperides either that group or the Azores. The expedition fitted out by Prince Henry in 1441, under Antonio and Bartolomeo di Nolli, partially discovered them. But they were not settled until after the voyage of Ca da Mosto and Antonio Usodimere in 1456.

(89) São Thiago, the St. Jago of English navigators.

(90) Ribeira Grande, owing to its insecure anchorage, is now in decay, and both port and cathedral are becoming picturesque ruins. Villa de Praia is now the chief town.

(91) The Salina Velha.

(92) By Nuño Tristam in one of the expeditions despatched by Prince Henry. In 1448 a fort was built here, destroyed, and reconstructed in 1461, after which it was for many years the chief commercial establishment of the Portuguese in West Africa, and especially on the Grains Coast and the district round about, now officially known as "La cote d'Arguin". After various vicissitudes, in which it was successively in the hands of the Dutch, the French, and the Brandenburghers (who, after offering it to the English for £10000, sold it to the Dutch for 30,000), it passed in 1721 again into possession of the French. The late Col. Ellis (Hist. of the Gold Coast, p. 4), asserts that on the island of Arguin,
which he believed was the Cerne of Hanno, cisterns, constructed by the
Cathaginian colonists, can still be traced. This is extremely doubtful. These
remains are much more likely those of the Portuguese, or of some of the various
masters of Arguin, now part of the colony of Senegal. The principal isles are
Tidre (Tider), Risse, Jouick, and Jagamet (Adeget).

(93) The Archil or Orchil lichen (Rocella tinctoria).
(94) This statement about the Guanches has been proved to be erroneous.
(95) El Piton, the loftiest point, is actually 12,200 feet high. Pory is evidently
inclined to swallow any legend.
(96) The "Sanguis Draconis" is not now a product of Porto Santo, for the island is
entirely bare of wood, though there was plenty when it was first discovered. The
Dragon's Blood of the Canaries is the resin of Dracana Draco, out of which
Perestrello, father-in-law of Columbus, who was Governor of the Island, hoped to
have made a fortune. But the trees were 'recklessly cut down for fuel and any

120

GENERAL DESCRIPTION, ETC. 121

other purpose, until the precious resin ceased to be gathered in Porto Santo. It is
referred to by Pliny as a product of the Fortunate Isles. "Ex iis quoque insulis
Fortunatis Crinabaris Romam advehabatur. Sane hodie num frequens est in insulis
arbor illa qua Crinabarim gignit, vulgo sanguinem draconis appellant" (Hist. Nat.,
lib. vI, cap. xxxvii). The Socotra Dragon's Blood which Pory mentions, p. 87, is
the exudation of an entirely different tree, viz., Pterocarphus Draco. The rabbit
(cony) pest has now been overcome, both in Porto Santo and in the Balearic Isles.
comprehende all Africa.'

THE DESCRIPTION OF AFRICA.
The borders of Africa.
A FRICA (if we may give credite vnto the writers of that
nation, being men of learning, and most skilful Cosmographers) beginneth
southward at certaine riuers issuing foorth of a lake in the desert of Gaoga.
Eastward it bordereth vpon the rier Nilus. It extendeth northward to that part of
Egypt, where Nilus at seuen mouthes dischargeth his streames into the Mediterran
sea: from whence it stretcheth westward as farre as the streites of Gibraltar, and is
bounded on that part with the vtmost sea-towne of all Libya, called *Nun.
Likewise the south * No., part thereof abutteth vpon the Ocean sea, which
compasseth Africa almost as farre as the deserts of Gaoga.The diuision of Africa.
O VR authors affirme, that Africa is diuided into fower
partes, that is to say, Barbaria, Numidia, Libya, and the lande of Negros. Barbaria
taketh beginning from the hill called Meies, which is the extreme part of all the
mountaines of Atlas, being distant from Alexandria almost three hundred miles. It
is bounded on the North side with the Mediterran sea, stretching thence to mount-
Meies aforesaid, and from mount-Meies extending it selfe to the streites of
Gibraltar. Westward it is limited with the said streites, from whence winding it
selfe out of the Mediterran sea into the maine Ocean, it is inclosed with the most
westerly point of Atlas: namely, at that Westerne cape which is next vnto the
towne called Messa. And southward it is bounded with that side of Atlas which
lieth towards the Mediterran sea. This is the most noble and worthie region of all
Africa, the inhabitants whereof are of a browne or tawnie colour, being a ciuill
people, and prescribe wholesome lawes and constitutions vnto themselues.
123

THE FIRST BOOKE OF THE
SNon.
The rier of
Niger.
The second part of Africa is called of the Latines Numidia, but of the Arabians
Biledulgerid: this region bringeth foorth dates in great abundance. It beginneth
eastward at the citie of Eloacat,3 which is an hundred miles distant from Egypt, &
extendeth west as far as the towne of *Nun,4 standing vpon the Ocean sea.
Northward it is inclosed with the south side of Atlas. And the south part thereof
bordereth vpon the sandie deserts of Libya. All the Arabians doe usuallly call it
The land of dates : because this onely region of Africa beareth dates.
The third part called of the Latines Libya, and of the Arabians Sarra (which word
signifieth a desert) beginneth eastward at that part of Nilus which is next vnto the
citie of Eloacat, and from thence runneth westward as far as the Ocean sea.
Northwarde it is bounded with Numidia, southward it abutteth vpon the land of
Negros, eastward it taketh beginning at the kmlandome of Gaoga, and stretcheth
westwarde even to the land of Gualata, which bordereth vpon the Ocean sea.
The fourth part of Africa which is called the land of Negros, beginneth eastward at the kingdom of Gaoga, from whence it extendeth west as far as Gualata. The north part thereof is inclosed with the desert of Libya, and the fourth part, which is unknownen unto vs, with the Ocean sea: howbeit the merchants which daily come from thence to the kingdom of Tombuto, haue sufficiently described the situation of that countrie unto vs. This lande of Negros hath a mightie riuers, which taking his name of the region, is called Niger: this riuers taketh his originall from the east out of a certaine desert called by the foresaide Negros Sen.5 Others will haue this riuers to spring out of a certaine lake, and so to run westward till it exoneraeth it selfe into the Ocean sea. Our Cosmographers affirme that the said riuers of Niger is derive out of Nilus, which they imagine for some certaine space to be swallowed.

DESCRIPTION OF AFRICA.

vp of the earth, and yet at last to burst fowrth into such a lake as is before mentioned. Some others are of opinion, that this riuers beginneth westward to spring out of a certaine mountaine, and so running east, to make at length a huge lake: which verily is not like to be true; for they usually saile westward from Tombuto to the kingdom of Ginea, yea and to the land of Melli also; both which in respect of Tombuto are situate to the west: neither hath the said land of Negros any kingdoms comparable, for beautifull and pleasant soile, unto those which adione unto the banks of Niger. And here it is to be noted, that (according to the opinion of our Cosmographers)

*that land of Negros by which Nilus is said to run *Aethiqpia. (namely, that part of the world which stretcheth eastward euen to the Indian sea, some northerly parcell whereof abutteth vpon the red sea, to wit, the countrie which lieth without the gulfe of Arabia) is not to be called any member or portion of Africa; and that for many reasons, which are to be found in the processe of this historie set downe more at large: The said countrie is called by the Latines Aethiopia. From thence come certaine religious Friers seared or branded on the face with an hot iron, who are to be seene almost ouer all Europe, and specially at Rome. These people have an Emperour, which they call Prete Gianni, the greater part of that land being inhabited with Christians. Howbeit, there is also a certaine Mahumeten among them, which is said to possesse a great dominion.6

A diuision of the fowerforenamedparres of Africa.

Arbarie is distinguished into fower kingdomes: the first whereof is the kingdome of Maroco; which is likewise diuided into seuen regions or prouinces, namely, Hea, Sus, Guzula, the territorie of Maroco, Duccala, Hazcora, & Tedles. The second kingdome of Barbarie

THE FIRST BOOKE OF THE

Htabat.

* Chauz.

* Tremizen.
called Fez, comprehendeth in like sort seuen regions within the bounds thereof; to wit, Temesne, the territorie of Fez, Azgara, *Elbat, Errif, Garet, and *Elcauz.
The third kingdome is called *Telensis, and hath three regions vnder it, namely, the mountaines, Tenez, and Algezer. The fourth kingdome of Barbarie is named Tunis; vnder which are comprized fower regions, that is to say, Bugia, Constantina, Tripolis in Barbarie, and Ezzaba, which is a good part of Numidia. Bugia hath alwaies beene turmoiled with continuall warres; because sometimes it was subiect vnto the king of Tunis, and sometimes againe vnto the king of Tremizen. Certaine it is that euen vntill these our daies, this Bugia was a kingdome of it selfe, and so continued till the principall citie of that region was at the commandement of Ferdinando the king of Castile, taken by one Peter of Nauarre.7
The diuision of Numidia.
This is the basest part of all Africa; neither will our Cosmographers vouchsafe it the name of a kingdome, by reason that the inhabitants thereof are so far distant asunder; which you may easily conjecture by that which followeth. Teffet a citie of Numidia containeth about fower hundred families, and is in regard of the Libyan desert, seuered from all places of habitation almost three hundred miles; wherefore this second part is thought by duers not to be woorthie the name of a kingdome. Howbeit we will make some relation of the habitable partes of Numidia; some whereof may not vnfitly bee compared with other regions of Africa, as for example, that of Segelmes, which territorie of Numidia lieth ouer against Barbarie; likewise Zeb, which is situate against Bugia, and the signiorie of Biledulgerid, which extendeth vnto the kingdome of Tunis. Reseruing therefore many particulars for the second part of this historie, we wil make

DESCRIPTION OF AFRICA.
our entrie and beginning at those places, which lie vpon the west of Numidia: the names wherof be these; Teffet, Guaden, Ifren, Hacca, Dare, Tabelbelt, Todga, Fercale, Segelmes, Benigumi, Fighig, Tegua, Tfabit, Tegorarin, Mefab, Tegort, and Guarghela. The region of Zeb containeth flue townes, to wit, Pescara, Elborgh, Nesta, Taolac, and Deufin: so many cities likewise hath the territorie of Biledulgerid; namely, Teozar, Caphesa, Nesreoa, Elchamid, and Chalbis: and from hence eastward are found the isles of Gerbe, Garion, Mesellata, Mestrata, Teoirraga, Gademis, Fizza, Angela, Birdeoa, and Eloacat. These are the namess of the most famous places of all Numidia, being bounded (as is said before) westward vpon the Ocean sea, and eastward with the riuer of Nilus.
A description 01 the Libyan deserts, which lie betweene Numidia and the land of Negros.
These deserts haue not as yet any certaine name amongst vs, albeit they be diuided into flue partes, and receive all their denomination from the inhabitants which dwell vpon them, that is to say, from the Numidians, who are in like sort themselves diuided into flue partes also, to wit, the people or tribes called Zanega, Ganziga, Terga, Leuta, and Berdeoa. There bee
Although the desert of Azaohad, so called for the drought and unfruitfulness of that place: likewise Hair, albeit a desert, yet so called for the goodness and temperature of the aire.

A division of the land of Negros into several kingdoms.

Moreover, the land of Negros is divided into many kingdoms: whereas albeit a great part be unknownen unto us, and removed far out of our trade; and we will notwithstanding make relation of those places, where we ourselves have abode, and which by long experience are grown very familiar unto us; as likewise of some other places, from whence merchants used to travel unto the same cities wherein my self was then resident; from whom I learned right well the state of John Leo their countries. I myself saw fifteen kingdoms of the travelled over.

15. kingdoms of Negros: howbeit there are many more, which although I of the land of Negros saw not with mine owne eies, yet are they by the Negros sufficiently knowned and frequented. Their names therefore (beginning from the west, and so proceeding Eastward and Southward) are these following: Gualata, Ghinea, Melli, Tombuto, Gago, Guber, Agadez, Cano, Cafena, Zegzeg, Zanfara, Guangara, Borno, Gaogo, Nube. These fifteen kingdoms are for the most part situated upon the river Niger, through the which merchants usually travel from Gualata to the city of Alcair in Egypt. The journey indeede is very long, but yet secure and void of danger. All the said kingdoms adjoin one upon another; ten whereof are separated either by the river Niger, or by some sandy desert: and in times past each one of the * About the fifteen had a several king, but now* at this present, they yeere 1526. are all in a manner subject unto three kings onely: namely, to the king of Tombuto who is Lord of the greatest part; to the king of Borno, who governeth the least part, and the residue is in subjection unto the king of Gaoga: howbeit he that possesseth the kingdom of Ducala hath a very small traine attending upon him. Likewise these kingdoms have many other kingdoms bordering upon the South frontiers of them: to wit, Biro, Temiam, Dauma, Medra, and Gorhan; the governors and inhabitants whereof are most rich and industrious people, great lovers of justice and equitie, albeit some lead a brutish kind of life.

DESCRIPTION OF AFRICA.

Of the habitations of Africa, and of the signification of this word Barbar. O Vr Cosmographers and historiographers affirm, that
in times past Africa was altogether disinhabited, except that part which is now called the land of Negros: and most certaine it is, that Barbarie and Numidia were for manyages destitute of inhabitants. The tawnie people of the said region were called by the name of Barbar, being derivued of the verbe Barbara, which in their toong signifieth to murmur: because the African toong soundeth in the eares of the Arabians, no otherwise than the voice of beasts, which utter their sounds without any accents. Others will haue Barbar to be one word twice repeated, forsomuch as Bar in the Arabian toong signifieth a desert, For (say they) when king Iphricus being by the Assyrians or Aethiopians druuen out of his owne kingdome, trauelled towards Aegypt, and seeing himselfe so oppressed with his enimies, that he knew not what should become of him and his followers, he asked his people how or which way it was possible to escape, who answered him Bar- Bar, that is, to the desert, to the desert: giuing him to vnderstand by this speech that he could haue no safer refuge, then to crosse ouer Nilus, and to flee vnto the desert of Africa. And this reason seemeth to agree with them, which affirme the Africans to be descended from the people of Arabia fcelix."

The originall of the people of Africa.

A Bout the originall of the Africans, our historiographers doe much disagree. For some will haue them to be deriued from the inhabitants of Paloestina; because (as they say) being expelled out of their owne countrie by the Assyrians, they came at length into Africa, & seeing the fruitfulnes o f the soile, chose it to be their place of habitation. Others are of opinion, that they tooke their originall from the Sabeans a people of Arabia fcelix, and that, before such time as they were put to flight by the Assyrians or Aethiopians, as hath beeene aforesaid. Some others report, that the Africans descended from certaine people of *Asia, who being chased thence by reason of warres which were waged against them, fled into Greece, which at the same, time had no inhabitants at all. Howbeit the enimie still pursuing them, they were forced to crosse the sea of Morea, and being arrived in Africa, to settle vselues there: but their enimies aboad still in Greece. All which opinions and reportes are to bee vnderstood onely of the originall of the tawnie people, that is to say, of the Numidians and Barbarians. 'For all the Negros or blacke Moores take their descent from Chus, the sonne of Cham, who was the sonne of NoZ" But whatsoeuer difference there be betweene the Negros and the tawnie Moores, certaine it is that they had all one beginning. For the Negros are descended of the Philistims, and the Philistims of Mesraim the *sonne of Chus: but the tawnie Moores fetch their petigree from the Sabeans, and it is evident that Saba was begotten of *Raina, which was the eldest sonne of Chus. Diuers other opinions

* Guadalhabit.
there be as touching this matter: which because they seeme not so necessarie wee haue purposely omitted.12

A diuision of the tawnie Moores into sundrie tribes or nations.

HE tawnie Moores1 are diuided into flue seuerall people or tribes: the tribes called Zanhagi, Musmudi, Zeneti, Hacari, and Gumeri.4 The tribe of Musmudi inhabit the western part of mount Atlas, from the provincie of Hea to the riuer of *Seruan.15 Likewise they dwell vpon the south part of the said mountaine, 130

DESCRIPTION OF AFRICA.

and vpon all the inward plaines of that region. These Musmude haue fower provinices vnder them: namely, Hea, Sus, Guzula,16 and the territorie of Marocco. The tribe of Gumeri possesse certaine mountaines of Barbarie, dwelling on the sides of those mountaines which lie ouer against the Mediterran sea: as likewise they are Lords of all the riuer called in their language Rif This riuer hath its fountaine neere vnto the streites of Gibraltar, and thence runneth eastwards to the kingdome of Tremizen, Tremizen called by the called by the Latines Casari.17 ancient Cosinograpkers These two tribes or people haue seuerall habitationes by Ca'sariao,Mauritania themselves ; the other three are dispersed confusiuely ouer Casariensis. all Africa: howbeit they are, like strangers, discerned one from another by certaine properties or tokens, maintaining continuall warre among themselues, especially those of Numidia. These (I say) are those very people (as some report) who had no other places then tents and wide fields to repose themselues in: and it is reported, that in times past they had great conflicts together, and that the vanquished were sent to inhabit townes and cities, but the conquerors held the champions and fieldes vnto themselues and there setled their aboad. Neither is it altogether unlikely; because the inhabitants of cities haue all one and the same language with the countrie people. For the Zeneti, whether they dwell in the citie or in the countrie, speake all one kinde of language: which is likewise to be vnderstood of the rest. The tribes of Zeneti, Haoari, and Sanhagi; inhabit the countrie of Temesne :1 sometimes they Hue peaceably, and sometimes againe, calling to minde their ancient quarrels, they breake foorth into cruell warres and manslaughters. Some of these people beare rule ouer all Africa, as namely the Zeneti, who in times past vanquished the familie called Idris; from which some affirme the true and naturall Dukes of Fez, and the founders of the same citie to deriue their petigrée: their 12 131

THE FIRST BOOKE OF THE

progenie likewise was called Mecnasa.19 There came afterward out of Numidia, another familie of the Zeneti called Magraoa: this Magraoa chased the familie of Mecnafa with all their Dukes and chieftaines out of their dominions. Not long after, the said tribe of Magraoa was expelled in like sort by certaine others of the race of the Sanhagij, called by the name of Luntuna,° which came also out of the desert of Numidia.

By this familie was the countrie of Temesna in processe
of time utterly spoiled and wasted, and all the inhabitants thereof slain, except
those which were of their owne tribe and kindred of Luntuna, vnto whom was
allotted the region of Ducala to inhabit, and by them was built the citie commonly called Maroco.21 It fell out afterwards by founders of
Mahumetan preacher among them,22 conspiring with the Hargij these Hargij
were of the familie of Musmuda) expelled the whole race of the Luntuna, and
vsurped that kingdome vnto himselfe. After this mans decease, succeeded in his
place one of his disciples called Habdul Munen a Baniguerag1el23 of the
kindred of the Sanhagij.
The kingdome remained vnto this family about an 120.
yeares, whereunto all Africa in a manner was subiect: At length being deposed by
the Banimarini, a generation of the Zeneti, the said familie was put to flight:
which Banimarini are said to haue raigned afterward for the space of 170.
yeares.14 The Banimarini which descended of the Sanhagij and of Magroa,
waged continuall warre against Banizeyan the king of Telensis: likewise the
progenie of Hafasa, and of Musmuda are at variance and dissenion with the king
of Tunis. So that you see what stirres and tumults haue at all times beene
occasioned in
those regions by the foresaid flue families.25
Certaine it is, that neither the Gumeri, nor the Haoari
haue at this present any iurisdiction at all ; albeit hereto-
DESCRIPTION OF AFRICA.
fore (as we reade in their chronicles)26 they had some certaine dominion, before
such time as they were infected with the Mahumetan lawe. Out of all which it is
evident, that in times past all the foresaid people had their habitations and tents in
the plaine fields: every one of which fauoured their owne faction, and exercised
all labours necessarie for mans life, as common among them. The governours of
the countrie attended their droues and flockes; and the citizens applied themselues
vnto some manuall art, or to husbandrie. The said people are diuided into flue
hundred seuerall families, as appeereth by the genealogies of the Africans, author
whereof is one Zbnu Rachu, whom I haue oftentimes read and perused. Some
writers are of opinion, that the king of Tombuto, the king of Melli,27 and the king
of Agadez fetch their originall from the people of Zanaga, to vvit, from them
which inhabite the desert.
The agreement or varietie of the Africani language.
T He foresaid flue families or people, being diuided into
hundreds of progenies, and hauing innumerable habitations, doe notwithstanding
vse all one kinde of language, called by them Aquel Amarig,28 that is, the
AquelAmarig. noble toong: the Arabians which inhabite Africa, call it a barbarous
toong ; and this the true and naturall language of the Africans. Howbeit it is
altogether different from other languages, although it hath diuers words common
with the Arabian toong; whereupon some would inferre; that the Africans (as is
aboue said) came by lineall descent from the Sabeans, a people of Arabia fcelix.
Others say, that these words were even then invented when the Arabians came
first into Africa, and began to take possession thereof: but these authors were so
rude and grosse-witted, that they left no writings behind.

THE FIRST BOOKE OF THE
which might be alleged either for, or against. Moreouer they haue among them
another diuersitie, not onely of pronuntiation, but of significant words also: as
namely, they which dwell neere vnto the Arabians, and exercise much traffique
with them, doe for the greater part use their language. Yea, all the Gumeri in a
manner, and most of the Haoari speake Arabian, though corruptly; which (I
suppose) came first hereupon to passe, for that the said people haue had long
acquaintance and conversuation with the Arabians. The Negros haue diuers
languages among themselves, among which they call one Sungai,29 and the same
is current in many regions; as namely, in Gualata,30 Tombuto,31 Ghinea, Melli,
and Gago3 Another language there is among the Negros, which they cal Guber;33
& this is rife among the people of Guber, of Cano34 of Casena,35 of Perzegreg,36
& of Guangra37 Likewise the kingdom of Borno hath a peculiar kinde of speech,
altogether like vnto that, which is used in Gaoga. And the kingdome of Nube38
hath a language of great affinitie with the Chaldean, Arabian, & Egyptian tongues.
But all the sea-towns of Africa from the Mediterannean sea to the mountains of Atlas,
speare broken Arabian. Except the kingdome and towne of Maroco, & the inland
Numidians bordering vpon Maroco, Fez, & Tremizen; all which, use the
Barbarian tongue. Howbeit they which dwell ouer against Tunis & Tripoli, speake
indeed the Arabian
language ; albeit most corruptly.
Of the Arabians inhabiting the citie of Africa.

* Hiutmen. (F that armie which was sent by Califa* Omen the k) third, in the fower hundred yeere of the Hegeira, there came into Africa
fowerscore thousand gentlemen and others, who hauing subdued sundrie
provinces, at length arriued in Africa: and there the Generall of the whole

DESCRIPTION OF AFRICA.
armie called *Hucha Hibnu Nafich remained. This man *Hucha, built that great
citie which is called of vs *Alcair. For *Cairaoan. he stood in feare of the people
of Tunis, least they should betray him, misdoubting also that they would procure
aide out of Sicily, and so give him the encounter. Wherefore with all his treasure
which he got, he travelled to the desert and firme ground, distant from *Carthage
about one * Tunis. hundred and twentie miles, and there is he said to haue built
the citie *Alcair. The remnant of his soldiers he *Cairaoan. commanded to keepe
those places, which were most secure and fit for their defence, and willed them to
build where no rocke nor fortification was. Which being done, the Arabians
began to inhabit Africa, and to disperse themselves among the Africans, who
because they had beene for certaine yeere subject vnto the Romans or Italians,
used to speake their language: and hence it is, that the naturall and mother-toong
of the Arabians, which hath great affinitie with the African toong, grew by little
and little to be corrupted: and so they report that these two nations at length conjoined themselves in one. Howbeit the Arabians usually do blaze their petigree in daily and triuiall songs; which custome as yet is common both to *vs, and to the people of Barbarie also. For no man there * The Moores of Granada. is, be he neuer so base, which will not to his owne name, adde the name of his nation; as for example, Arabian, Barbarian, or such like.39

Of the Arabians which dwell in tents.

THE Mahumetan priestes alwaies forbad the Arabians to passe ouer Nilus with their armies and tents. Howbeit in the fower hundred yeere of the Hegeira40 we reade, that they were permitted so to doe by a certaine factious and schismaticall *Califa : because one of his nobles had * A lahunctan patriarke rebelled against him, vsurping the citie of Cairaoan, and

THE FIRST BOOKE OF THE the greatest part of Barbaric. After the death of which rebell, that kingdom remained for some yeeres vnto his posteritie and familie; whose iurisdiction (as the African chronicles report) grew so large and strong in the time of Elcain (the Mahumetan Califa and patriark of Arabia) Gehoar a slaue that he sent vnto them one Gehoar, whom of a slaue he by condition, conquered all had made his counsellour, with an huge armie. This Barbarie, Numidia, Gehoar conducting his armie westward, recouered all E ‘gypt, and Syria. Numidia and Barbaric. Insomuch that he pierced vnto the region of Sus, and there claimed most ample tribute : all which being done, he returned backe vnto his Calipha, and most faithfully surrendred vnto him whatsoever he had gained from the enemie.41 The Calipha seeing his prosperous successe, began to aspire vnto greater exploites.

And Gehoar most firmely promised, that as he had recouered that westerne dominion vnto his Lord, so would he likewise by force of warre most certainly restore vnto him the countries of the East, to wit, Egypt, Syria, and all Arabia; and protested moreouer that with the greatest hazard of his life, he would be auenged of all the injuries offered by the familie of Labhus42 vnto his Lords predecessors, and would reuest him in the royall seate of his, most famous grandfathers, great-grandfathers, and progenitors. The Calipha liking well his audacious promise, caused an Armie of fower-score thousand soldiers, with an infinite summe of money and other things necessarie for the warres, to be deliucre d vnto him. And so this valiant and stout chieftaine being prouided for warfare, conducted his troupes through the deserts of Aegypt & Barbaric; & hauing first put toflight thevice-Califaof Aegypt(who fledvntoElair the Califa of Bagdet) in short time he subdued very easily all the prouinces of Aegypt and Syria. Howbeit he could not as yet hold himselfe secure; fearing least the Califa of Bagdet would assaile him with an armie out of Asia, and least the garrisons which he had left to keepe Barbarie
DESCRIPTION OF AFRICA.

should be constrained to forsake those conquered provinices. Wherefore hee built a citie, and caused it to be walled round about. In which citie he left one of his most trustie captains, with a great part of the armie: and this citie he called by the name of Alchair, which afterward by others was Gehoar the 43 first founder named Cairo.43 This Alchair is saide daily so to haue of Caro, increased, that no citie of the world for buildings and inhabitants was any way comparab le thereunto. Now when Gehoar perceiued that the Calipha of Badget made no preparation for warre, he foorthwith wrote vnto his Lord, that all the conquered cities yeelded due honour vnto him, and that all things were in quiet and tranquillitie: and therefore, that himselfe (if he thought good) should come ouer into Aegypt, and thereby with his onely presence should preuaile more to recouer the remnant of his dominions, then with neuer so huge an armie: for he was in good hope that the Calipha of Badget hearing of his expedition, would leuje his kingdome and prelacie, and would betake himselfe to flight. This notable and joyfull message no sooner came to the eares of Calipha Elcain; but he being by his good fortune much more encouraged then before, and not foreth inking himselfe what mischiefe might ensue, leuido a great armie, appointing for vice-roy for all Barbarie one of the familie of Sanagia aforesaid, finding him afterward not to be his trustie friend. Moreouer Calipha Elcain arriuing at Alchair, and being most honorably entertained by his seruant Gehoar, began to thinke vpon great affaires, and hauing gathered an huge armie, resolued to wage battell against the Calipha of Badget. In the meane season he that was appointed viceroy of Barbarie compacting with the Calipha of Badget, yeeldeth himselfe and all Barbarie into his hands. Which the Calipha most kindly accepted, and ordained him king ouer all Africa. But Calipha Elcain hearing this newes at Alchair was woonderfully afflicted in minde; partly

THE FIRST BOOKE OF THE

b2cause he saw himselfe repelled from his owne kingdome, and partly for that he had spent all his money which hee brought with him: insomuch that he knew not what in the world to doe, determining some seuer punishment for Geoar, by whose counsell he left his kingdome of Arabia. Howbeit there was one of his secret counsellors a very learned and wittie man, who seeing his Lord so sad and pensiue, and being desirous by some good aduise to preuent the danger imminent, comforted him in this wise: Your highnes knoweth (most inuincible Califa) that fortune is most variable, and that the courage of your soldiers is no whit daunted by reason of these mishaps. For mine owne part, as I haue heretofore shewed my selfe to be your trustie seruant, so will I at this time giue you such profitable counsell, whereby you may within short space recouer all those dominions which haue bee no so treacherously taken from you, and may without al peraduenture most easily attaine vnto your owne harts desire. And this you may doe without maintaining tny armie at all; yea, I assure you, if you please to take mine aduise, that I will foorthwith procure you such an armie, as shall giue you great store of money, and yet notwithstanding shall doe you good servuice also. The Califa being
somewhat emboldened at these speeches, asked his counsellour how this might possibly be brought to effect: My Lord (saith his counsellor) certaine it is, that the Arabians are now grown so populous and to so great a number, that all Arabia cannot containe them, scarcely wil the yeerely increase of the ground suffice to feede their droues, and you see with what great famine they are afflicted, and how they are destitute not onely of habitations, but euen of victuals and sustenance. Wherefore if you had heeretofore giuen them leaue, they would long ere this invaded Africa. And if you will now licence them so to doe, doubt you not, but that you shall receive of them an huge masse

DESCRIPTION OF AFRICA.

of golde. This counsell could not altogether satisfie the Califa his minde: for he knew right well that the Arabians would so waste all Africa, as it should neither bee profitable for himselfe, nor for his enemies. Notwithstanding, seeing that his kinndome was altogether endangered, hee thought it better to accept those summes of money which his counsellour promised, and so to be reuened of his enemie, then to lose both his kinndome and gold all at once. Wherefore hee permitted all Arabians, which would pay him ducats apeece, freely to enter Africa; conditionally that they would shewe themselues most deadly enemies vnto the treacherous king of Barbarie. Which libertie being granted vnto them, it is reported that ten Ten tribesof Arabians tribes or families of Arabians, being halfe the people of invade Africa. Arabia deserta, came immediately into Africa; vnto whom certaine inhabitants of Arabia fcelix ioyned themselues, insomuch that there were found amongst them about fiftie thousand persons able to beare armes: their women, children, and cattell were almost innumerable: the storie whereof Ibnu Rachu, the most diligent chronicler of African Ibnu Rachu a famous histoaffaires (whom we haue before mentioned) setteth downe riographer. at large. These Arabians hauing trauersed the desert betweene Aegypt and Barbarie, first laid siege vnto Tripolis a citie of Barbarie, which being ouercome, they slew a great part of the citizens, the residue escaping by flight. Next of all they encountred the towne of Capes,44 which was taken and vanquished. At length they beseiged Cairaoan also; howbeit the citizens being sufficiently provided of victuals, are said to haue indured the siege for eight monethes : which being expired, they were constrained to yeeld : at what time there was nothing in Cairaoan but wofull slaughters, hideous outcries, and present death. This land the Arabians diuided among themselues, and began to people and inhabite the same; requiring in the meane space large tributes of the townes

THE FIRST BOOKE OF THE and prouinces subiect vnto them. And so they possessed all Africa, vntill such time as one Joseph the sonne of feffin attained to the kingdom of Marocco. This Joseph was the first king of Marocco, who endeuored by all meanes to advauce the friends and kinred of the late deceased king of Africa vnto the kingdome;
neither did he cease vntill he had expelled all the Arabians out of Cairaon.

Howbeit the Arabians possessed the regions thereabout, givng themselves wholy
to spoiles and robberies: and the friends of the said deceased king could beare
rule but in certaine places only.45 Afterward succeeded in the kingdome of
Marocco one Mansor, who was the fourth king and prelate of that Mahometan
sect which was called Muachedim.46 This man, albeit his grand-fathers & great
grand-fathers had alwaies fauoured the posteritie and friends of the foresaid
deceased African king, and had restored them to their ancient dignitie; deuised
altogether how to oppose himselfe against them, and to vsurpe all their authoritie.
Wherefore making a fained league with them, we reade, that he prouoked the
Arabians against them, and so very easily ouercame them. Afterward lansor
brought the greatest part of the Arabians into the westerne dominions of Africa;
vnto the better sort of whom he gaue the habitation of Duccala & Azgara, and
vnto the baser remnant he bequeathed the possession of Numidia. But in processe
of time he commanded the Numidian slaues to be set at libertie, and so in despight
of the Arabians, he caused them to inhabite that part of Numidia which he had
allotted vnto them. But as for the Arabians of Azgara and of certaine other places
in Barbarie, he brought them all vnder his subiection. For the Arabians out of
deserts are like fishes without water: they had indeede often attemepted to get into
the deserts; but the mountaines of Atlas, which were then possesse d by the
Barbarians, hindred their passage. Neither had they

DESCRIPTION OF AFRICA.

libertie to passe ouer the plaines, for the residue of the Barbarians were there
planted. Wherefore their pride being abated, they applied themselues vnto
husbandrie, hauing no where to repose themselues, but onely in villages, cottages,
and tents. And their miserie was so much the greater, in that they were
constrained yeerely to disburse vnto the king of Marocco most ample tribute.
Those which inhabited Duccala, because they were an huge multitude, easily
freed themselues from all tribute, and imposition. A great part of the Arabians
remained still at Tunis, for that Alansor had refused to carie them along with him:
who, after the death of the said _ansor, grew to be Lords of Tunis, and so
continued, till they resigned their gouernment vnto the people called Abu-Haf,4s
vpon condition that they should pay them halfe the reuenues thereof; and this
condition hath remained firme euen vntill our daies. Howbeit, because the
Arabians are increased to such innumerable swarmeres, that the whole reuenues are
not sufficient for them, the king of Tunis 1526. most iustly allowe th some of them
their duties, to the end they may make secure passage for merchants, which
indeede they performe without molestation or hurt of any. But the residue which
are deprivued of their pay, betake themselues wholy to robberies, thefts, slaughters,
and such other monstrous outrages. For these, lurking alwaies in the woods, no
sooner see any merchant approching, but suddenly they breake foorth, deprivuing
him of his goodes and life also: insomuch that now merchants dare not passe that
way but with a garrison of safe-conduct. And so they passe sometimes to their
great inconuenience. For they are notwithstanding constrained to giue vnto the
foresaid Arabians, which are in pay with the king of Tunis, great summes of money: and are likewise oftentimes so in danger of robbers, that they lose both their goods & liues.

THE FIRST 300KE OF THE
A diuision of the Arabians which inhabite Africa, and are called by the name of Barbarians, into diuers progenies or kinreds.49
HE Arabians which inhabite Africa are diued into three partes: one part whereof are called Cachin, the second Hilell, and the third Machill. The Cachin are diuided into three nations or tribes ; to wit, the tribes of Etheg, Sumait, and Sahid.
Moreouer Etheg is diuided into three families; that is to say, the familie of Delleg, Elmuntefig, and Subair: and these are dispersed into many regions. Hilel are deriued into fower generations ; to wit, the people of Benihemir, of Rieh, of Sufien, and of Chusain. The familie of Benihemir is diuided into the linages of Huroam, Hucben, Habrum and Mussim. The tribe of Rieh are distributed into the kinreds called Deuvad, Suaid, Afgeg, Elcherith, Enedri, and Garfam; which kinreds possesse many dominions. Machil haue three tribes vnder them: to wit, Mastar, Hutmen, and Hassan. Mastar are diuided into Ruchen, and Selim; Hutmen into Elhasi and Chinan; and Hassan into Deuihessen, Deuimansor, and Deuihubaidulla. Deuihessen is distinguished into the kinreds called Dulein, Berbun, Vodein, Racmen and Hamram; Deuimansor into Hemrun, Menebbe, Husein, and Albhusein; and lastly Deuihubaidulla, into Garag, Hedeg, Teleb, and Geoan. All these doe in a manner possesse innumerable regions; insomuch that to reckon them vp at large, were a matter not onely difficult, but almost impossible.50
Of the habitations and number of the foresaid Arabians.
THE most noble and famous Arabians were they of the familie of Etheg, vnto whom Almansor gaue the regions of Duccala and of Tedles51 to inhabit. These

DESCRIPTION OF AFRICA.
Arabians euen till our times haue beene put to great distresse and hazard, partly by the Portugall king, and partly by the king of Fez. They haue at all opportunities, if need should require, a hundred thousand soldiers fit to beare armes, a great part whereof are horsemen. The Arabians called Sumait enjoy that part of the Libyan desert which lieth over against the desert of Tripoly. These make often invasions into Barbarie, for they haue no places allotted them therein, but they and their camels doe perpetually remaine in the deserts. They are able to leuie fower-score thousand soldiers, the greatest part being footmen. Likewise the tribe of Sahid doe inhabite the desert of Libya: and these haue had alwaies great league and familiaritie with the king of Guargala. They haue such abundance of cattell, that they doe plentifully supply all the cities of that region with flesh, and that especially in sommer time, for all the winter they stirre not out of the deserts. Their number is increased to about a hundred and fiftie thousand, hauing not
many horsemen among them. The tribe of Delleg possesse diuers habitations, howbeit Cosaria containeth the greatest part of them. Tremizell. Some also inhabit vpon the frontiers of the kingdome of Bugia; who are said to receiue a yeerely stipend from their next neighbours. But the least part of them dwell vpon the field-countrey of Acdes, vpon the borders of Mauritania, and vpon some part of mount Atlas, being subject vnto the king of Fez. The people of Elmuntafig are seated in the province of Azgar, and are called by the later writers Elcaluth. These also pay certaine yeerely tribute vnto the King of Fez, being able to furnish about eight thousand horsemen to the warres. The kindred of Sobair doe inhabit not farre from the kingdome of Gezeir, being many of them vnder the pay of the king of Tremizen, and are said to enioy a great part of Numidia. They haue, more or lesse, three thousand most warlike horsemen.

THE FIRST BOOKE OF THE

They possesse likewise great abundance of camels; for which cause they abide all winter in the deserts. The remnant of them occupieth the plaine which lieth betweene Sala and Mecnes. These haue huge droues of cattell, and exercise themselves in husbandrie, being constrained to pay some yeerely tribute vnto the king of Fez. They haue horsemen, who, as a man may say, are naturally framed to the warres, about fower thousand in number.

Of the people of Hillel, and of their habitations.

H Illel, which are also called Benihamir, dwell vpon the frontiers of the kingdome of Tremizen and Oran. These range vp and downe the desert of Tegorarin, being in pay vnder the king of Tremizen, and of great riches and power; insomuch that they haue at all times in a readines for the warres six thousand horsemen. The tribe of Hurua possesse onely the borders of Mustuganim. These are sauage people, giuing themselues wholy to spoiles and robberies, and alienating their mindes from the warres. They neuer come foorth of the deserts; for the people of Barbarie will neither allow them any places of habitation, nor yet any stipend at all: horsemen they haue to the number of two thousand. The kindred of Hucban are next neighbours vnto the region of Melian, who receiue certaine pay from the king of Tunis. They are rude and wilde people, and in very deede estranged from al humanitie: they haue (as it is reported) about fifteene hundred horsemen. The tribe of Habru inhabit the region lying betweene Oran and Mustuganim: these exercise husbandrie, paying yeerely tribute vnto the king of Tremizen, and being scarce able to make one hundred horsemen.

The people called Muslim possesse those deserts of Masila which extend vnto the kingdome of Bugia. These likewise are giuen onely to theft and robberie; they take tribute both of their owne people, and of other regions adioyning vnto them. The tribe Riech inhabite those deserts of Libya which border vpon Constantina. These haue most ample dominions in Numidia, being now diuided into sixe parts. This
right famous and warlike nation receieth stipende from the king of Tunis, having flue thosand horsemen at command. The people of Suaid enjoy that desert, which is extended vnto the signorie of Tenez. These haue very large possessions, receiuing stipend from the king of Tremizen, being men of notable dexterity, as well in the warres as in all other conversaion of life. The kindred of Azgge dwell not all together in one place: for part of them inhabite the region of Garret among the people called Hemram: and the residue possesse that part of Duccala which lieth neere vnto Azaphi. The tribe of Elcherit dwell vpon that portion of Helin which is suate in the plaine of Sahidim, hauing the people of Heah tributarie vnto them, and being a very uncivil and barbarous people. The people called Enedri are seated in the plaine of Heah: but the whole region of Heah maintaineth almost lower thousand horsemen; which notwithstanding are vnfit for the warres. The people of Garsa haue sundrie mansions; neither haue they any king or governour. They are dispersed among other generations, and especially among the kindreds of Manebbi and Hemram. These convey dates from Segelmessa to the kingdom of Fez, and carrie backe againe from thence such things as are necessarie for Segelmess.60

Of the tribe of lachil.

The people called Ruche, who are thought to be descended from Mastar, doe possesse that desert, which lieth next vnto Dedes and Farcala.61 They haue very small dominions, for which cause they are accounted no whit rich; howbeit they are most valiant soldiers, and exceeding swift of foote; insomuch that they esteeme it a great disgrace, if one of their footemen be vanquished by two horsemen. And you shall finde scarce any one man among them, which will not outgoe a very swift horse; be the journey neuer so long. They haue about flue hundred horsemen; but most warlike footemen, to the number of eight thousand. Selim inhabite vpon the riuier of Dara; from whence they range vp and downe the deserts. They are endowed with great riches, carrying euery yeere merchandize vnto the kingdom of Tombuto, and are thought to be in high fauour with the king himselfe.62 A laige iurisdiction they haue in Darha and great plentie of camels: and for all opportunities of warre they haue euer in a readiness three thousande horsemen. The tribe of Elhasis dwelleth vpon the sea-coast neere vnto Messa. They doe arme about flue hundred horsemen, and are a nation altogether rude and vnacquainted in the warres. Some part of them inhabiteth Azgara. Those which dwell about Messa are free from the yoke of superioritie, but the others which remaine in Azgar are subject to the king of Fez. The kindred of Chinan are dispersed among them which before were called Elcaluth, and these also are subject unto the king of Fez.64 Very warlike people they are; and are able to set foorth two thousand horsemen. The people of Deuhiessen are diuided into the kindreds of Duleim, Bubrun, Vode, Deuimansor, and Deuhiubaidulla, Duleim are conversant in the deserts of Libya with the African people called Zanhaga. They haue neither dominion nor yet any stipend; wherefore they are very poore and giuen to robberie: they trauell vnto Dara, and exchange cattell for dates with the inhabitants there. All brauerie & comelines of
apparell they utterly neglect; and their number of fighting men is ten thousand, fewer thousand
Traoque to Tombuto.
146

DESCRIPTION OF AFRICA.
being horsemen and the residue footmen. The people called Burbun possesse, that part of the Libyan desert, which adioweth unto Sus. The, are a huge multitude, neither have they any riches beside camels. Vnto them is subject the citie of Tefet, which scarce sufficeth them for the maintenance of their horses, being but a few. The people of Vode enioyeth that desert, which is situate between Guaden and Gualata.65 They beare rule ouer the Guadenites, and of the Duke of Gualata they receiue yeerely tribute, and their number is grown almost infinite. For by report they are of abilitie to bring into the field almost three score thousand most skilful soldiers; notwithstanding they have great want of horses. The tribe of Racmen occupie that desert which is next vnto Hacha6 They haue very large possessions, and doe in the springtime usually trauell vnto Tefet : for then alwaies they haue somewhat to doe with the inhabitants there. Their people fit for armes are to the number of twelue thousand ; albeit they haue very few horsemen. The nation of Hamrum inhabit the deserts of Tagauost, exacting some tribute of the inhabitants there, and with daily incursions likewise molesting the people of Nun. Their number of soldiers is almost eight thousand.67

THE generation of Deuimansor, which are saide to deriue their petigree from Deuimansor, inhabite the desert ouer against Segellmess, who continually wander by the Libyan deserts as farre as Ighid. They haue tributarie vnto them the people of Segelmesse, of Todgatan, of Tebelbelt, and of Dara.68 Their soile yeldeth such abundance of dates, that the yeerely increase thereof is sufficient to maintaine them, although they had nothing else to liue on. They are of great fame in other nations, being able to furnish for the warres about three thousand K2

THE FIRST BOOKE OF THE horsemen. There dwell likewise among these certaine other Arabians of more base condition, called in their language Garfa Esgch; which notwithstanding haue great abundance of horses and of all other cattell. A certaine part also of the people Hemrun obtaineth many and large possessions among the Numidians, from whence they haue a notable yeerely revenue brought them in: this part of Hemrun maketh often excursions towards the deserts of Fighig. In summer they disperse themselves all ouer the prouince of Garet, possessing the east part of Mauritania. They are noble and honest persons, and endued with all kinde of humanitie and ciuilitie; insomuch that all the kings of Fez in a manner do usuallly chuse them wiues out of the same tribe; needes therefore must there be great friendship and familiaritie among them. The people of Menebbe doe almost inhabite the very same desert, hauing two prouinces of Numidia vnder them; to wit, Matgara, and Retebbe. These also are a most valiant nation, being in pay
under the province of Segelmess, and being able to make about two thousand horsemen. The kindred of Husein, which are thought to be descended of Deuimansor, are seated upon the mountains of Atlas. They have in the said mountains a large jurisdiction, namely divers castles everywhere, and many most rich and flourishing cities, all which, they thinke, were giuen them in olde time by the vice-royes of the Marini: for so soone as they had won that kingdome, the kindred of Husein afforded them great aide and service. Their dominion is now subject unto the kings of Fez and of Segelmess. They have a captain, which for the most part resideth at the citie commonly called Garseluin. Likewise, they are alwaies, in a manner, traurers of that desert which in their language is called Eddara. They are taken to be a most rich and honest people, being of abilitie to furnish for the warres about sixe thousande horsemen. Among

DESCRIPTION OF AFRICA.
these you shall oftentimes finde many Arabians of another sort, whom they use onely to be their servants. The tribe of Abulhusein doe inhabitte part of the foresaid desert of Eddara, howbeit a very small part: the greatest number of whom are brought unto such extreme misery, that they have not in those their wilde tents sufficient sustenance to liue vpon. True it is, that they have built them certaine habitations vpon the Libyan deserts; but yet they are cruelly pinched with famine and with extreme penurie of all things: and that there might be no end of their misery they are constrained to pay yeerely tribute vnto their kindred and parents.69
The ofspring of Deuiubaidulla.
ONE generation of the people of Deuiubaidulla are those which are named Gharra: these enjoy the deserts of Benigomi and Fighig.70 hauing very large possessions in Numidia. They are stipendiaries vnto the king of Tremizen; who diligently endeouoreth to bring them to peace and tranquilitie of life; for they are wholly giuen to theft and robberie. In sommer time they usuallie repaire unto Tremizen, where they are thought for that season of the yeere to settle their aboad: their horsemen are to the number of four thousand, all which are most noble warriours. The kindred of Hedeg possesse a certaine desert neere vnto Tremizen, called in their owne language Hangad.71 These haue no stipend from any prince, nor yet any jurisdiction at all, rapine and stealth is onely delightfull vnto them, they prouide onely for their familie and themselues, and are able to set forth about flue hundred horsemen. The tribe of Theleb inhabite the plains of *Algezer: these haue often vagaries ouer the *Alger. deserts vnto the province of Tedgear.2 Vnto them were subject in times past the most famous cities of Algezer and Tedelles :73 howbeit in these our daies they were recovered againe from them by Barbarossa the Turke; which losse could not but greatly grieue and molest their king. It is reported moreouer, that at the same time,
the principal of the said people of Theleb were cut off. For strength and cunning in chivalry they were inferior to no other nation; their horsemen were about three thousand. The tribe of Gegoan inhabit not all in one place: for part of them you may finde among the people of Guarag, and the residue amongst the people of Hedeg, and they are unto them no otherwise than their servants, which condition they notwithstanding most patiently and willingly submit themselves unto. And here one thing is Tlze Arabians called to be noted by the way; to wit, that the two forenamed Cachi and people called *Schachin and Hilel are originally Arabians Hilel descended of Shhi from Ismael of Arabia deserta, and thinke themselves to be descended the base sonne of Abraham, from Ismael the sonne of Abraham. And those which were The Arabians called Machil, came first forth of Arabia fcelix, and deriue called -lachil descended of their petigree from Saba. Before whom the Mahumetans Saba. preferre the former, which of Ismad are called Ismaelites.

And because there hath alwaies beene great controversie among them, which part should be of greater nobilitie, they haue written on both sides many dialogues and epigrams, whereby each man is wont to blaze the renowne, the vertuous manners, and laudable customes of his owne nation. The ancient Arabians, which were before the times of the Ismaelites, were called by the African historiographers Arabi-Araba, as if a man should say, Arabians of Arabia. But those which came of Ismael, they call Arabi Mus-Araba, as if they should say, Arabians ingressed into the land of Arabia, or Arabians accidentally, because they were not originally bred & borne in Arabia. And thfi which afterward came into Africa, they name in their language Mustehgeme, that is, barbarous Arabians; and that because they joyned themselves unto strangers insomuch that not only their speech, but their manners are most corrupt and barbarous. These are (friendly reader) the particulars, which for these ten yeeres my memorie could reserve, as touching the originauls and diversities of the Africans and Arabians; in all which time I remember not, that euer I read or saw any historic of that nation. He that will know more, let him haue recourse unto Hibnu Rachu the historiographer beforenamed.

The ma'zners and customes of the African people, which inhabit the desert of Libya.

T hose flue kindes of people before rehearsed, to Wit,Thepeople of the people of Zenega, of Gansiga, of Terga, of Leuta, and of Bardeoa, are called of the Latins Numidce: and they liue all after one manner, that is to say, without all lawe and ciuilitie. Their garment is a narrow and base peece of cloth, wherewith scarce halfe their bodie is couered. Some of them wrap the ir heads in a kinde of blacke cloth, as it were with a scarf, such as the Turks vse, which is commonly called a Turbant. Such as will be discerned from the common sort, for gentlemen, weare a jacket made of blew cotton with wide sleeues. And cotton-
cloth is brought vnto them by certayne merchants from the land of Negros. They haue no beastes fit to ride vpon except their camels; vnto whom nature, betweene the bunch standing vpon the hinder part of their backes and their neckes, hath allotted a place, which may fitly serue to ride vpon, in stead of a saddle. Their manner of riding is most ridiculous. For sometimes they lay their legs acrosse vpon the camels neck; and sometimes againe (hauing no knowledge nor regard of stirrops) they rest their feete vpon a rope, which is cast ouer his shoulders. In stead of spurres they vse a truncheon of a cubites length, hauing at the one end thereof a goad, wherewith they pricke onely the shoulders of their camels.

THE FIRST BOOKE OF THE

Those camels which they vse to ride vpon haue a hole bored through the gristles of their nose, in the which a ring of leather is fastened, whereby as with a bit, they are more easily curbed and mastred; after which manner I haue seene buffles vsed in Italie. For beds, they lie vpon mats made of sedge and bulrushes. Their tents are couered for the most part with course chamlet, or with a harsh T'Voollgrow-ng kinde of wooll which commonly groweth vpon the boughes vpon he Palme tre. of their date-trees. As for their manner of liuing, it would seeme to any man incredible what hunger and scarcitie this nation will indure. Bread they haue none at all, neither vse they any seething or rosting; their foode is camels milke onely, and they desire no other dainties.

For their breakefast they drinke off a great cup of camels milke: for supper they haue certaine dried flesh stieped in butter and milke, wherof each man taking his share, eateth it out of his fist. And that this their meate may not stay long vndigested in their stomackes, they sup off the foresaid broth wherein their flesh was steeped: for which purpose they vse the palmes of their hands as a most fit instrument framed by nature to the same end. After that, each one drinks his cup of milk, & so their supper hath an ende. These Numidians, while they haue any store of milke, regard water nothing at all, which for the most part happeneth in the spring of the yeere, all which time you shall finde some among them that will neither wash their hands nor their faces. Which seemeth not altogether to be vunlikely; for (as we said before) while their milke lasteth, they frequent not those places where water is common: yea, and their camels, so long as they may feede vpon grasse, will drinke no water at all. They spende their whole daies in hunting and theeuing: for all their indeuour and exercise is to driue away the camels of their enemies; neither will they remaine aboue three daies in one place, by reason that

DESCRPTPTION OF AFRICA.

they haue not pasture any longer for the sustenance of their camels. And albeit (as is aforesaid) they haue no ciuilitie at all, nor any lawes prescribed vnto them; yet haue they a certaine gouernour or prince placed ouer them, vnto whom they render obedience and due honour, as vnto their king. They are not onely ignorant
of all good learning and liberall sciences; but are likewise altogether careles and
destitute of vertue : insomuch that you shall finde scarce one amongst them all
which is a man of judgement or counsell. And if any injured partie will goe to the
lawe with his adversarie, he must ride continually five or sixe daies before he can
come to the speech of any iudge. This nation hath all learning and good
disciplines in such contempt, that they will not once vouchsafe to goe out of their
deserts for the studie and attaining thereof: neither, if any learned man shall
chance to come among them, can they loue his companie and conversa­tion, in
regarde of their most rude and detestable behauiour. Howbeit, if they can finde
any iudge, which can frame himselfe to liue and continue among them, to him
they giue most large yeerely allowance. Some allow their iudge a thousand ducats
yeerely, some more, and some lesse, according as themselues think good. They
that will seeme to be accounted of the better sort, couer their heads (as I said
before) with a peece of blacke cloth, part whereof, like a vizard or maske,
reacheth downe ouer their faces, couering all their countenance except their eies;
and this is their daily kinde of attire. And so often as they put meate into their
mouthes they remooue the said maske, which being done, they foorthwith couer
their mouths again; alleging this fond reason: for (say they) as it is vnseemely for
a man, after he hath receiued meate into his stomack, to vomite it out of his mouth
againe and to cast it vpon the earth; euen so it is an vndecent part to eate meate
with a mans mouth vncouered. The

THE FIRST BOOKE OF THE
women of this nation be grosse, corpulent, and of a swart complexion. They are
fattest vpon their brest and paps, but slender about the girdle-stead. Very ciuill
they are, after their manner, both in speech and gestures: sometimes they will
accept of a kisse; but whoso tempteth them farther, putteth his owne life in
hazard. For by reason of iealousie you may see them daily one to be the death and
destruction of another, and that in such sausage and brutish manner, that in this
case they will shew no compassion at all. And they seeme to be more wise in this
behalfe then diuers of our people, for they will by no meanes match themselues
vnto an harlot. The liberalitie of this people hath at all times beene exceeding
great. And when any travellers may passe through their drie and desert territories,
they will neuer repaire vnto their tents, neither will they themselues trauell vpon
the common highway. And if any carouan or multitide of merchants will passe
those deserts, they are bound to pay certaine custome vnto the prince of the said
people, namely, for euerie camels load a peece of cloth woorth a ducate. Vpon a
time I remember that travelling in the companie of certaine merchants ouer the
desert called by them Araoan, it was our chaunce there to meete with the prince of
Zanaga ; who, after he had receiued his due custome, inuited the said companie of
merchants, for their recreation, to goe and abide with him in his tents fower or
flue daies. Howbeit, because his tents were too farre out of our way, and for that
we should haue wandered farther then we thought good, esteeming it more
'conuenient for vs to hold on our direct course, we refused his gentle offer, and for
his courtesie gaue him great thanks. But not being satisfied therewith, he
commanded that our camels should proceede on forward, but the merchants he
carried along with him, and gave them very sumptuous entertainment at his place of aboad. Where wee were no sooner arrived, but this good prince

DESCRIPTION OF AFRICA.
caused camels of all kindes and ostriches, which he had Camels and ostriches used
hunted and taken by the way, to bee killed for his household for victuals. provision. However we requested him not to make such daily slaughters of his camels; affirming moreover, that we never used to eate the flesh of a gelt camell, but when all other victuals failed vs. Whereunto he answered, that he should deal unciually, if he welcommed so woorthie and so seldom-seene guests with the killing of small cattell onely. Wherefore he wished us to fall to such provision as was set before vs. Here might you have scene great plenty of rosted and sodden flesh: their roasted ostriches were brought to the table in wicker platters, being seasoned with sundrie kindes of herbs and spices. Their bread made of Mill and panike was of a most sauorie and pleasant taste: and alwaies at the end of dinner or supper we had plenty of dates and great store of milke serued in. Yea, this bountifull and noble prince, that he might sufficiently shew how welcome we were vnto him, would together with his nobilitie alwaies bear vs companie: howbeit we ever dined and supped apart by our selues. Moreover he caused certaine religious and most learned men to come vnto our banquet; who, all the time we remained with the said prince, vsed not to eate any bread at all, but fed onely vpon flesh and milke. Whereat we being somewhat amazed, the good prince gently told vs, that they all were borne in such places whereas no kind of graine would grow: howbeit that himselfe, for the entertainment of strangers, had great plenty of corne laid vp in store. Wherefore he bad us to be of good cheere, saying that he would eate onely of such things as his owne natuie soile affoorded: affirming moreover, that bread was yet in vse among them at their feast of passouer, and at other feasts also, whereupon they vsed to offer sacrifice. And thus we remained with him for the space of two daies; all which time, what wonderfull and

THE FIRST BOOKE OF THE
magnificent cheere we had made vs, would seeme incredible to report. But the third day, being desirous to take our leave, the prince accompanied vs to that place where we ouertooke our camels and companie sent before. And this I dare most deeply take mine oath on, that we spent the saide prince ten times more, then our custome which he recieued came to. Wee thought it not amisse here to set downe this historie, to declare in some sort the courtesie and liberalitie of the saide nation. Neither could the prince aforesaid vnderstand our language nor we his; but all our speech to and fro was made by an interpreter. And this which we have here recorded as touching this nation, is likewise to be vnderstood of the other fower nations above mentioned, which are dispersed ouer the residue of the Numidian deserts.77
The manners and customes of the Arabians which inhabite Africa.

The Arabians, as they have sundrie mansions and places of aboad, so doe they liue after a diuers and sundry maner. Those which inhabite betweene Numidia and Libya leade a most miserable and distressed life, differing much in this regard from those Africans, whom wee affirmed to dwell in Libya. Howbeit they are farre more valiant than the said Africans; and vse commonly to exchange camels in the lande of Negros: they haue likeWhere the wise great store of horses, which in Europe they cal horses Barbarie horses are bred. of Barbarie. They take woonderfull delight in hunting and pursuing of deere, of wilde asses, of ostriches, and such like. Neither is it here to be omitted, that the greater part of Arabians which inhabite Numidia, are very wittie and Arabian poems conceited in penning of verses; wherein each man will and verses. decipher his loue, his hunting, his combates, and other his woorthie actes: and this is done for the most part in ryme, after the Italians manner. And albeit they are most

DESCRIPTION OF AFRICA.

liberally minded, yet dare they not by bountifull giuing make any shew of wealth; for they are daily oppressed with manifold inconueniences. They are apparelled after the Numidians fashion, sauing that their women differ somewhat from the women of Numidia. Those deserts which they doe now enjoy were woont to be possessed by Africans: but the Arabians with their armie inuading that part of Africa, draue out the naturall Numidians, and reserued the deserts adioining vpon The land of dates, vnto themselues; but the Numidians began to inhabite those deserts which border vpon the land of Negros.8 The Arabians which dwell betweene mount Atlas and the Meditteran sea are far wealthier then these which we now speake of, both for costlines of apparell, for good horsemate, and for the statelines and beautie of their tents. Their horses also are of better shape and more corpulent, but not so swift as the horses of the Numidian desert. They exercise husbandrie and haue great increase of corne. Their droues and flockes of cattell be innumerable, insomuch that they cannot inhabite one by another for want of pasture. They are somewhat more vile and barbarous then those which inhabite the deserts, and yet they are not altogether destitute of liberalitie: part of them, which dwell in the territorie of Fez are subiect unto the king of Fez. Those which remaine in Marocco and Duccala hauc continued this long time free from all exaction and tribute: but so soone as the king of Portugall began to beare rule ouer Azafi and Azamor, there began also among them strife and ciuill warre. Wherefore being assailed by the king of Portugall on the one side, and by the king of Fez on the other, and being oppressed also with the extreme famine and scarcitie of that yeere, they were TheArabians offer themselues brought vnto such miserie, that they freely offered them- slaues to any that would selves as slaues vnto the Portugals, submitting themselues reteue their extreme to any man, that was willing to releue their intolerable hunger.

157
THE FIRST BOOKE OF THE
hunger: and by this meanes scarce one of them was left in all Duccala. Moreouer
those which possess the deserts bordering vpon the kingdomes of Tremizen and
Tunis may all of them, in regard of the rest, be called noblemen and gentlemen.
For their gouernours receiuing every yeere great revenues from the king of Tunis,
duide the same afterward among their people, to the end they may avoid all
discord: and by this meanes all disension is eschewed, and peace is kept firme
and inviolable among them. They haue notable dexteritie and cunning, both in
making of tents, and in bringing vp and keeping of horses. In summer time they
usually come neere vnto Tunis, to the end that each man may prouide himselfe of
bread, armour, and other necessaries: all which they carrie with them into the
deserts, remaining there the whole winter. In the spring of the yeere they applie
themselves to hunting, insomuch that no beast can escape their pursuit. My selfe, I
remember, was once at their tents, to my no little danger and inconuenience;
where I sawe greater quantitie of cloth, brasse, yron, and copper, then a man shall
oftentimes finde in the most rich warehouses of some cities. Howbeit no trust is to
be giuen vnto them; for if occasion serue, they will play the theeues most slyly
and cunningly; notwithstanding they seeme to carrie some shewe of civilitie. They
take great delight in poetrie, and will pen most excellent verses, their language
being very pure and elegant. If any woorthie poet be found among them, he is
accepted by their gouernours with great honour and liberalitie; neither would any
man easily beleeue what wit and decencie is in their verses. Their women
(according to the guise of that countrie) goe very gorgeously attired: they weare
linnen gownes died black, with exceeding wide sleeues, ouer which sometymes
they cast a mantle of the same colour or of blew, the corners of which mantle are
very artificially fastened about their shoulders with a fine
158

DESCRIPTION OF AFRICA.
siluer claspe. Likewise they haue rings hanging at their eares, which for the most
part are made of siluer: they weare many rings also vpon their fingers. Moreouer
they usually weare about their thighes and ankles certaine scarves and rings, after
the fashion of the Africans. They couer their faces with certaine masks hauing
onely two holes for their eies to peepe out at. If any man chance to meeue with
them, they presently hide their faces, passing by him with silence, except it be
some of their allies or kinsfolks; for vnto them they alwaies discouer their faces,
neither is there any vse of the said maske so long as they be in presence.79 These
Arabians when they trauell any journee (as they oftentimes doe) they set their
women vpon certaine saddles made handsomely of wicker for the same purpose,
and fastened to their camels backes, neither be they anything too wide, but fit
onely for a woman to sit in. When they goe to the warres each man carries his
wife with him, to the end that she may cheere vp her good man, and giue him
encouragement. Their damsels which are vnmarried doe usually paint their faces,
brests, armes, hands, and fingers with a kinde of counterfeit colour:80 which is
accounted a most decent custome among them. But this fashion was first brought
in by those Arabians, which before we called Africans, what time they began first
of all to inhabite that region; for before then, they neuer vse any fa lse or glozing 
colours. The women of Barbarie vse not this fond kind of painting, but contenting 
themselues only with their naturall hiew, they regarde not such fained ornaments: 
howbeit sometimes they will temper a certaine colour with hens-dung and safron, 
wherewithall they paint a little round spot on the bals of their cheeks, about the 
breith of a French crowne. Like wise betweene their eie-browes they make a 
triangle; and paint vpon their chinnes a patch like vnto an oliue leafe. Some of 
them also doe paint their eie-browes: and

159

THE FIRST BOOKE OF THE 
this custome is very highly esteemed of by the Arabian poets and by the 
gentlemen of that countrie. Howbeit they will not vse these fantasticall ornaments 
aboue two or three daies together: all which time they will not be seen e to any of 
their friends, except it be to their husbands and children: for these paintings seeme 
to bee great allurements vnto lust, whereby the said women thinke themselues 
more trim and beautifull. 
How the Arabians in the deserts betweene Barbarie and Aegypt doe lead their 
liues. 
I"THE life of these men is full of miserie and calamitie: 
1. for the places where they inhabite are barren and 
vnpleasant. They haue some store of camels and cattell: howbeit their fodder is so 
scarce, that they cannot well sustaine them. Neither shall you finde ouer all the 
whole region any place fit to beare corne. And if in that desert there be any 
villages at all, which vse to husband and manure their ground; yet reape they 
small commoditie thereby, except it be for plentifull increase of dates. Their 
camels and other of their cattell they exchange for dates and come; and so the 
poore husbandmen of the foresaide villages haue some small recompence for their 
labours: notwithstanding, how can this satisfie the hunger of such a multitude? 
For you shall dayly see in Sicilia great The Arabians numbers of their sonnes 
layde to pawne. Because when of Barca lay they haue not wherewithall to pay for 
the corne which they their sonnes to 
pawne vnto tke there buy, they are constrained to leaue their sonnes behinde 
Sicilians for 
corne, them, as pledges of future payment. But the Sicilians, if 
their money be not paide them at the time appointed, will chalenge the Arabians 
sonnes to be their slaues. Which day being once past, if any father will redeem his 
childe, he must disburse thrise or fower times so much as the due debt amounteth 
vtnto: for which cause they are the most notable theeues in the whole world. If any 
stranger fall 
160

DESCRIPTION OF AFRICA. 
into their hands, depring him of all that he hath, they presently carry him to 
Sicilie, and there either sell or exchange him for corne. And I thinke, that no 
merchants durst at any time within these hundred yeeres arriue for traffiques sake
vpon any part of their coast. For when they are to passe by with merchandize, or about any other weightie affaires, they eschew that region five hundred miles at the least. Once I remember, that I my selfe, for my better securitie, and to auoide the danger of those mischievous people, went in companie with certaine merchants, who in three ships sayled along their coast. We were no sooner espied of them; but forthwith they came running to the shore, making signes that they would traffique with vs to our great aduantage. Howbeit because we durst not repose any trust in them, none of our companie would depart the ship, before they had deliuered certaine pledges vnto vs. Which being done, we bought certaine Eunuchs or gelded men, and good store of butter of them. And so immediately weighing our ankers we betooke vs to flight, fearing least we shoul d haue beene met withall by the Sicilian and Rhodian Pirates, and beene spoiled not onely of our goods, but of our liberties also. To be short, the saide Arabians are verie rude, forlorn, beggerly, leane, and hunger-starued people, hauing God (no doubt) alwaies displeased against them, by whose vengeance they dayly sustaine such grievous calamities.8'

Of the people called Soara, namely, which possesse droues and flockes of cattell, and being Africans by birth, do notwitting or dissembling the manners of the Arabians. 

YOv shall finde many among the Africans which liue altogither a shepheards or drovers life, inhabiting vpon the beginning of mount Atlas, and being dispersed here and there ouer the same mountaine. They are con-

THE FIRST BOOKE OF THE 

The ouerthrow and death of the King of Tunis his sonne.

strained alwaies to pay tribute either to the King of the same region where they dwell, or else to the Arabians, except those onely which inhabite Temesna, who are free from all forren superioritie, and are of great power. They speake the same kinde of language that other Africanes doe, except some fewe of them which conuerse with the inhabitants of the citie called Vrbs (which is neere vnto Tunis)82 who speake the Arabian toong. Moreouer there is a certaine people inhabiting that region which diuideth Numidia from Tunis. These oftentimes wage warre against the King of Tunis himselfe, which they put in practice not many yeeres since, when as the said King his sonne marching towards them from Constantina with an armie, for the demaunding of such tribute as was due vnto him, fought a verie vnofortunate battell. For no sooner were they advertised of the Kings sonne his approach, but foorthwith they went to meete him with two thousande horsemen, and at length vanquished and slew him at vnawares, carrying home with them all the furniture, bag, and baggage, which he had brought foorth. And this was done in the yeere of Mahumets Hegeira 915. From that time their fame hath beene spread abroad in all places. Yea, many of the king of Tunis his subiects reuolted from their King vnto them; insomuch that the Prince of this people is grown so puissant, that scarcely is his equaH to be found in all Africa.s8 

0j the faith and religion of the ancient Africans or Moores. 

THE ancient Africans were much addicted to idolatrie,
euen as certain of the Persians are at this day, some of whom worship the sunne, and others the fire, for their gods. For the saide Africans had in times past magnificent and most stately temples built and dedicated, as well to the honour of the sunre as of the fire. In these temples day and night they kept fire kindled, giuing diligent heed that it might not at any time be extinguished, euen as we read of the Romane Vestall virgines: All which you may read more fully and at large in the Persian and African Chronicles. Those Africans which inhabited Libya and Numidia, would each of them worship some certaine planet, vnto whom likewise they offered sacrifices and prayers. Some others of the land of Negros worship Guighimo, that is to say, The Lord of Heauen. And this sound point of religion was not deliuered vnto them by any Prophet or teacher, but was inspired, as it were, from God himselfe. After that, they embraced the Jewish law, wherein they are said to haue continued many yeeres. Afterward they professed the Christian religion, and continued Christians, vntil such time as the Mahometan superstition preuailed; which came to passe in the yeere of the Hegeira 208. About which time certaine of Mahomet's disciples so bewitched them with eloquent and deceiueable speeches, that they allured their weake minds to consent vnto their opinion; insomuch that all the kingdomes of the Negros adioyning vnto Libya receiued the Mahumetan lawe. Neither is there any region in all the Negros land, which hath in it at this day any Christians at all. At the same time such as were found to be Jewes, Christians, or of the African religion, were slaine euerie man of them. Howbeit those which dwell neere vnto the Ocean sea, are all of them verie grosse idolaters. Betweene whom and the Portugals there hath beene from time to time and euen at this present is, great traffique and familiaritie. The inhabitants of Barbarie continued for many yeeres idolaters; but before the comming of Mahomet aboue 250 yeeres, they are sai de to haue embraced the Christian faith: which some thinke came to passe vpon this occasion; namely, because that part of Barbarie which containeth the kingL2

THE FIRST BOOKE OF THE dome of Tripolis and Tunis, was in times past gouerned by Apulian & Sicilian Captaines, and the countries of *Treiizen. *Cwfaria and of *Mauritania are supposed to haue beene * Maroco and Fez subject vnto the Gothes. At what time also many Christians fleeing from the furie and madnes of the Gothes left their sweet natuie soyle of Italy, and at length arrieved in Africa neere vnto Tunis: where hauing setled their aboad for some certaine space, they began at length to haue the dominion ouer all that region. Howbeit the Christians which inhabited Barbaria, not respecting the rites and ceremonies of the Church of Rome, followed the Arrians religion and forme of liuuing: and one of the African Christians was that most gedly and learned father Saint Augustine.4 When the Arabians therefore came to conquer that part of
Africa they found Christians to be Lords over the regions adiacent; of whom, after sundry hot conflicts, the said Arabians got the victorie. Whereupon the Arrians being deprived of all their dominions and goods went part of them into Italy and part into Spaine. And so about two hundred yeeres after the death of Mahumet, almost all Barbarie was infected with his law.

Howbeit afterward, ciuile dissensions arising among them, neglecting the law of Mahumet, they slew all the priests and gouernours of that region. Which tumult when it came to the eares of the Mahometan Caliphas, they sent an huge armie against the saide rebels of Barbarie, to wit, those which were reuoluted from the Calipha of Bagdet, and severely punished their misdemeanor. And euen at the same time was layd the most pernicious foundation of the Mahometan law; notwithstanding there haue remained many heresies among them euen vntil this verie day. As A booke written touching the patrons of the Mahometan lawe, and likewise by John Leo concerning the concerning the difference in religion betweene the MahumeAahumetan religion, tans of Africa, and them of Asia, we will (by Gods grace) write more in another seuerall volume; and in the meane season, let these particulars which we haue noted suffice the Reader.

Of the letters and characters of the Africans.

These writers which record the histories of the Arabians doings are all jointly of opinion, that the Africans were woont to use onely the Latine letters. And they The Africans vsed in times doe most constantly affirme, that the Arabians, when they past none other kind of letters first inuaded Africa and especially Barbarie (which was but the Roman the principall seate of the Africans) found no letters norletters. characters there, beside the Latine. Neither indeede doe they denie that the Africans haue a peculiar kinde of language, but this they firmly avouch, that they haue the very same letters which the Hetrurians or Florentines a people of Italie haue. The Arabians haue no historie* of * Perhaps he meaneth the African matters, which was not first written in Latine. histories of Salust, Titus They haue certaine ancient authors, who writ partly in the Liuius, and times of the Arrians and partly before their times, the others. names of all which are cleane forgotten. Howbeit it is very likely that those Latine authors have written many volumes: for when their interpreters laboured to persuade something unto vs, I remember they would say, it is contained in the seuentieth booke. Neither did they in translating of the said volumes altogether follow the authors order; but taking the historie of some one prince, they would conioine his time and actions with the historie of the Persian, Assyrian, and Chaldaan kings, or of the Israelites, which concerned the same times. But when as those which rebelled against the Calipha of Bagdet (as is aforesaid) got the ypper hand in Africa, they burnt all the Africans bookees. For they were of opinion, that the Africans, so long as they had
any knowledge of natural philosophy or of other good artes and sciences, would
every day more and more arrogantly contemne the lawe of Mahumet.
Contrariwise, some historiographers there

THE FIRST BOOKE OF THE
are which affirme, that the Africans had a kinde of letters peculiar unto
themselves; which notwithstanding, from the time wherein the Italians began first
to inhabite Barbarie, and wherein the Christians fleeing out of Italy from the
Gothes, began to subdue those provinces of Africa, were utterly abolished and
taken away. For it is likely that a people vanquished shoulde follow the customs
and the letters also of their conquerors. And did not the same thing happen to the
Persians, while the Arabians empire stood ? For certaine it is, that the Persians at
the same time lost those letters which were peculiar unto their nation: and that all
their booke, by The Mahfume- the commandement of the Mahumetan prelates,
were burnt, tan Califas
casted all the least their knowledge in natural philosophy, or their bookes of the
Persians to be idolatrous religion might move them to contemne the burned.
precepts of Mahumet. The like also (as we shewed
before) befall the Barbarians when as the Italians and the Gothes usurped their
dominions in Barbarie; which may here (I hope) suffice the gentle reader.
Howbeit this is out of doubt, that all the sea-cities and inland-cities of Barbarie
doe use Latine letters onely, whensoever they will commit any epitaphes or any
other verses or prose unto posteritie. The consideration of all which former
particulars hath made me to be of opinion, that the Africans in times past had their
owne proper and peculiar letters, wherein they described their doings and
exploits.
For it is likely that the Romans, when they first subdued those provinces (as
conquerors usually doe) utterly spoiled and took away all their letters and
memorie, and established their owne letters in the stead thereof; to the end that the
fame and honour of the Roman people might there onely be continued. And who
knoweth not that the very same attempt was practised by the Goths upon the
stately buildings of the Romans, and by the Arabians against the monuments of
the Persians. The very same

DESCRIPTION OF AFRICA.
thing likewise we daily see put in practice by the Turks, who when they haue
gotten any citie or towne from the Christians, doe presently cast forth of the
temples all the images and memorials of their saints. And to omit all the aforesaid,
may we not in our time see the like daily practised in Rome; where sumptuous
and stately buildings left vnperfect by reason of the vn timely death of one Pope,
are for some noueltie utterly ruined and destroyed by his next successor ? Or
else, doth not the new Pope cause his predecessours armes to be razed, and his
owne in stead thereof to be set vp ? Or at the least, if he will not seeme so
arrogant, letting his predecessours monuments stand still, doth he not erect others
for himselfe farre more sumptuous and stately? No maruell therefore, though so long sucesse of times and so many alteratons haue quite bereaued the Africans of their letters. Concerning those nine hundred yeeres wherein the Africans vsed the letters of the Arabians, Ibnu Rachich, a most diligent writer of Africa, doth in his Chronicle most largely dispute; whether the Africans euer had any peculiar kinde of writing or no. And at last he conduceth the affirmatiue part: that they had: for (saith he) whosoeuer denieth this, may as well deny, that they had a language peculiar vnto themselves. For it cannot be that any people should haue a proper kinde of speech, and yet should use letters borrowed from other nations, and being altogether vnfit for their mother-language.85

Of the situation of Africa.

As there are fower partes in Africa, so the situation thereof is not in all places alike. That part which lieth towards the Mediterraean sea, that is to say, from the streites of Gibraltar to the frontiers of Aegypt, is here and there full of mountaines: Southward it is extended about a hundred miles, albeit in some places it be larger and in

167

THE FIRST BOOKE OF THE
some other narrower. From the saide mountaines vnto mount Atlas there is a very spatious plaine & many little hillocks. Fountaines there are in this region great store, which meeting together at one head doe send forth most beautifull riuers and cristall streames. Betweene the foresaid mountaines and the plaine countrie is situate the mountaine of Atlas; which beginning westward vpon the Ocean sea, stretcheth it selfe towards the east as farre as the borders of Aegypt. Ouer against Atlas lieth that region of Numidia which beareth dates, being euerywhere almost sandie ground. Betweene Numidia and the land of Negros is the sandie desert of Libya situate, which containeth many mountaines also; howbeit merchants trauell not that way, when as they may goe other waies with more ease and lesse danger. Beyond the Libyan desert beginneth the land of Negros, all places whereof are barren and sandie except those which adioine vpon the riuer of Niger, or through the which any riuer or streame runneth.

Of the vnpleasant and snowie places in Africa.

A LI the region of Barbarie, and the mountaines contained therein, are subject more to cold then to heat. For seldome commeth any gale of winde which bringeth not some snow therwith. In al the said mountaines there grow abundance of fruits, but not so great plentie of come. The inhabitants of these mountaines liue for the greatest part of the yeere vpon barlie bread. The springs and riuers issuing forth of the said mountaines, representing the qualitie and taste of their natie soile, are somewhat muddie and impure, especially vpon the confines of Mauritania. These mountaines likewise are replenished with woods and loftie trees, and are greatly stored with beastes of all kindes. But the little hils and vallies lying betweene the foresaid mountaines

168

DESCRIPTION OF AFRICA.
and mount Atlas are far more commodious, and abounding with corne. For they are moistened with rivers springing out of Atlas, and from thence holding on their course to the Mediterranean sea. And albeit woods are somewhat more scarce upon these plaines, yet are they much more fruitfull, then be the plaine countries situate betwene Atlas and the Ocean sea, as namely the regions of Maroco, of Duccala, of Tedles, of Temesna, of Azgara, and the country lying towards the straights of Gibraltar. The mountaines of Atlas are exceedingly colde and barren. The mounaignes of Atlas and bring foorth but small store of corne, being woody on exceeding cold. all sides, and engendring almost all the rivers of Africa. The fountaines of Atlas are euyn in the midst of summer extremely cold; so that if a man dippeth his hand therein for any long space, he is in great danger of loosing the same. Howbeit the said mountaines are not so cold in all places: for some partes thereof are of such milde temperature, that they may be right commodiously inhabited: yea and sundry places thereof are well stored with inhabitants; as in the second part of this present discourse we will declare more at large. Those places which are destitute of inhabitants be either extremely cold, as namely the same which lie ouer against Mauritania: or very rough and unpleasant, to wit, those which are directly opposite to the region of Temesna. Where notwithstanding in summer time they may feede their great and small cattell, but not in winter by any meanes. For then the North winde so furiously rageth, bringing with it such abundance of snowe; that all the cattell which till then remaine vpon the saide mountaines, and a great part ot the people also are forced to lose their liues in regard thereof: wherefore whosoeuer hath any occasion to trauell that way in winter time, chuseth rather to take his journey betweene Mauritania and Numidia. Those merchants which bring dates out of Numidia for the use and service of other nations, set foorth usually vpon their journey about the ende of October; and yet they are oftentimes so Most wonder-oppressed and ouertaken with a sudden fall of snowe, that full and terriblesnowes, scarcely one man among them all escapeth the danger of the tempest. For when it beginneth to snow ouer night, before the next morning not onely carts and men, but euyn the verie trees are so drowned & overwhelmed therein, that it is not possible to finde any mention of them. Howbeit the dead carcasses are then founde when the sunne hath melted the snow. I my selfe also, by the goodness of The extreme almighty God, twise escaped the most dreadfull danger of snow which John Leo the foresaid snow; whereof, if it may not be tedious to the himself escaped. reader, I will heere in a few wordes make relation. Vpon a certaine day of the foresaid moneth of October, trauelling with a great companie of Merchants towards Atlas, we were there about the sunne going downe weather-beaten with a most cold and snowy kinde of hayle. Here we found eleuen or
twelue horsemen (Arabians to our thinking) who perswading vs to leaue our carts and to goe with them, promised vs a good and secure place to lodge in. For mine owne part, that I might not seeme altogether vnciuill, I thought it not meete to refuse their good offer; albeit I stood in doubt least they wen t about to practise some mischiefe. Wherefore I bethought my self to hide vp a certaine summe of gold which I had as then about me. But all being ready to ride, I had no leisure to hide away my coine from them; whereupon I fained that I would goe ease myselfe. And so departing a while their companie, and getting me vnder a certaine tree, whereof I tooke diligent notice, I buried my money betweene certaine stones and the root of the said tree. And then we rode on quietly till about midnight. What time one of them thinking that he had staied long ynough for his pay, began to vtter that in words which secretly he had conceiued in his minde. For he asked whether I had...
our way, shewing vs where the snowe was of least depth, and yet euen there it touched our horse bellies. This day was so cleere, that the sunne tooke away all the cold of the two daies going before. At length entring into a certaine village neere vnto Fez, we understanded, that our cartes which passed by, were ouerwhelmed with the snowe. Then the Arabians seeing no hope of recompence for all the paines they had taken (for they had defended our carts from theeeues) carried a certaine Iew of our companie with them as their captive (who had lost a great quantitie of dates, by reason of the snowe aforesaid) to the end that he might remaine as their prisoner, till he had satisfied for all the residue. From my selfe they tooke my horse, and committed mee vnto the wide world and to fortune. From whence, riding vpon a mule, within three daies I arrived at Fez, where I heard dolefull newes of our merchants and wares, that they were cast away in the snowe. Yea, they thought that I had bcene destroied with the rest; but it seemed that God would haue it otherwise. Now, hauing finished the historie of mine owne misfortunes, let vs returne vnto that discourse where we left. Beyond Atlas there are certaine hot & dry places moistened with very few riuers, but those which flow out of Atlas it selfe: some of which riuers running into the Libyan deserts are dried vp with the sands, but others do ingender lakes. Neither shal you finde in these countries any places apt to bring forth corne, notwithstanding they haue dates in abundance. There are also certaine other trees bearing fruit, but in so small quantitie, that no increase nor gaine is to be reaped by them. You may see likewise in those partes of Numidia which border vpon Libya certaine barren hils destitute of trees, vpon the lower parts whereof growe nothing but unprofitable thornes and shrubs. Among these mountaines you shall finde no riuers nor springs, nor yet any waters at all, except it be in certaine pits and wels almost vnknowen vnto the inhabitants of that region. Moreouer in sixe or seuen daies journey they haue not one drop of water, but such as is brought vnto them by certaine merchants vpon camels backes. And that especially in those places which lye vpon the maine road from Fez to Tombuto, or from Tremizen to *Agad. That journey likewise is verie *Agadez. dangerous which is of late found out by the merchants of our daies from Fez to Alcair7 ouer the deserts of Libya, were it not for an huge lake in the way, vpon the bankes whereof the Sinites and the Goranites doe inhabites8 But in the way which leadeth from Fez to Tombuto are certaine pits enuironed either with the hides or bones of camels. Neither doe the merchants in sommer time passe that way without great danger of their Hues : for oftentimes it falleth out, when the south winde bloweth, that all those pits are stopped vp with sande. And so the merchants, when they can finde neither those pits, nor any mention thereof, must needes perish with extreame thirst: whose carcasses are afterward found lying scattered here and there, and scorched with the heat of the sunne89 One remedy they haue in this case, which is verie strange: A strange remedie vsed for when they are so grieuously oppressed with thirst, they by the African merchants to
kill foorthwith some one of their camels, out of whose quench their bowels they wring and expresse some quantitie of water, thirst. which water they drinke and carrie about with them, till they haue either found some pit of water, or till they pine away for thirst. In the desert which they cal Azaaad there are as yet extant two monuments built of marble, vpon which marble is an Epitaphe engrauen, signifying that one of the said monuments represented a most rich

THE FIRST BOOKE OF THE merchant, and the other a carrier or transporter of wares. A merchant Which wealthie merchant bought of the carrier a cup of constrained by extreme thirst, water for tenne thousand ducates, and yet this pretious gaue ten thousand duckats water could suffice neither of them; for both of them were for a cup of water. consumed with thirst. This desert likewise containeth sundry kinds of beasts, which in the fourth part of this discourse concerning Libya, and in our treatise of the beasts of Africa, we will discourse of more at large. I was determined to haue written more c6cerning those things which happened vnto my selfe & the rest of my company trauelling through the Libyan deserts vnto Gualata. For somtime being sore a thirst, we could not find one drop of water, partly because our guide strayed out of the direct course, and partly because our enemies had cut off the springs and chanels of the foresaid pits and wels. Insomuch that the small quantitie of water which we found, was sparingly to be kept; for that which would scarce suffice vs for flue daies, we were constrained to keepe for ten. But if I should commit to writing all things woorthie of memorie, a whole yeare were not sufficient for me. The lande of Negros is extreme hot, hauing some store of moysture also, by reason of the riuer of Niger running through the midst thereof. All places adioining vpon Niger doe mightily abound both with cattle & come. No trees I saw there but only certain great ones, bearing a kind of bitter fruit like vnto a chestnut, which in their The fruit language is called Goron. Likewise in the same regions called Goran. Cocos. Cucum- grow Cocos, cucumbers, onions, and such kinde of herbes bers. Onions, and fruits in great abundance. There are no mountaines at all either in Libya or in the land of Negros; howbeit diuers fennes and lakes there are; which (as men report) the inundation of Niger hath left behinde it. Neither are the woods of the said regions altogether destitute of Elephants and other strange beasts; whereof we will make relation in their due place.

DESCRIPTION OF AFRICA. What naturall impressions and motions the aire of Africa is subiect vnto ; and what effects ensue thereupon. Throughout the greatest part of Barbarie stormie and Icold weather begin commonly about the midst of October. But in December and Januarie the cold growtheth somewhat more sharpe in all places; howbeit this happeneth in the
morning onely, but so gently and remissely, that no man careth greatly to warme
himselfe by the fire. Februarie somewhat mitigateth the cold of winter, but that so
inconstantly, that the weather changeth sometime flue and sometime sixe times in
one day. In March the north and west windes vsually blowe, which cause the trees
to be adorned with blossoms. In Aprill all fruits attaine to their proper forme and
shape, insomuch that cherries are commonly ripe about the end of Aprill and the
beginning of May. In the midst of May they gather their figs: and in mid-lune
their grapes are ripe in many places. Likewise their peares, their sweete quinces
and their damascens attaine vtnto sufficient ripenes in the moneths of lune and
Julie. Their figs of Autumnne may be gathered in August; howbeit they neuer haue
so great plentie of figs and peaches, as in September. By the midst of August they
vsually begin to drie their grapes in the sun, whereof they make reisins. Which if
they cannot finish in September, by reason of vnseasonable weather, of their
grapes as then vgathered they vse to make wine and must, especially in the
province of Rifa, as we will in due place signifie more at large. In the midst of
October they take in their honie, and gather their pomegranates and quinces. In
Novembre The oliues oj they gather their oliues, not climing vp with ladders nor
Africa. plucking them with their hands, according to the custome of Europe; for
the trees of Mauritania and C.esarea are so tal, that no ladder is long ynoough to
reach vtnto the fruit And therefore their oliues being full ripe, they clime the
175

THE FIRST BOOKE OF THE
trees, beating them off the boughes with certaine long poles, albeit they know this
kinde of beating to be most hurtfull vtnto the saide trees. Sometimes they haue
great plentie of oliues in Africa, and sometimes as great scarcitie. Certaine great
oliue-trees there are, the oliues whereof are eaten ripe by the inhabitants, because
they are not so fit for oile. No yeere falles out to be so vnseasonable, but that they
haue three monethes in the spring alwaies temperate. They begin their spring
vpon the fifteenth day of Februarie, accounting the eighteenth of May for the ende
thereof: all which time they haue most pleasant weather. But if from the flue and
twentith Raine signify- of Aprill, to the fifth of May they haue no raine fall, they
implentie or
scarcitie. take it as a signe of ill lucke. And the raine-water which
falleth all the time aforesaid they call Naisan, that is, water blessed of God. Some
store it vp in vessels, most religiously keeping it, as an holy thing. Their summer
lasteth till the sixteenth of August; all which time they haue most hot and cleere
weather. Except perhaps some showers of raine fall in July and August, which
doe so infect the aire, that great plague and most pestilent feuers ensue thereupon
; with which plague whosoeuer is infected, most hardly escapeth death. Their
Autumne they reckon from the 17. of August to the 16. of November; hauing
commonly in the moneths of August and September not such extreme heate as
before. Howbeit all the time betwene the 15. of August and the 15. of September
is called by them the furnace of the whole yeere, for that it bringeth figs, quinces,
and such kinde of fruits to their full maturitie. From the 15. of November they
begin their winter-season, continuing the same till the 14. day of Februarie. So
soone as winter commeth, they begin to till their ground which lieth in the plaines:
but upon the mountaines they goe to plough in October. The Africans are most
certainly perswadcd that euery yeere containeth

DESCRIPTION OF AFRICA.
fortie extreme hot dales, beginning upon the 12. of Iune; and againe so many
daises extreme cold, beginning from the 12: of December. Their Aequinoctia are
upon the 16. of March, and the 16. of September. For their Solstitia they account
the 16. of Iune and the 16. of December. These rules they doe most strictly
obserue, as well in husbandrie and nauigation, as in searching out the houses and
true places of the planets : and these instructions, with other such like they teach
their yoong children first of all. Many countrie-people and husbandmen there be
in Africa, Thepesants anid v’n earned
who knowing (as they say) neuer a letter of the booke, PeopefAfica cnninff in
will notwithstanding most learnedly dispute of Astrologie, Aetro/og ie. & alleage
most profoid reasons & arguments for themselues. But whatsoeuer skill they haue
in the art of Astrologie, they first learned the same of the Latines: yea they giue
those very names vnto their moneths which the Latincs do. Moreouer they had
Extat among them a certaine great booke diuided into three volumes, which they
call The treasurie or storehouse of husbandrie. This booke was then translated out
of Latine into their toong, when Mansor was Lord of Granada. In the said
Treasurie are all things contained which may seeme in any wise to concerne
husbandrie ; as namely, the changes and varietie of times, the manner of sowing,
with a number of such like particulars, which (I thinke) at this day the Latine
toong it selfe, whereout these things were first translated, doth not containe2
Whatsoeuer either the Africans or the Mahumetans haue, which seemeth to
appertaine in any wise to their law or religion, they make their computation
thereof altogether according to the course of the moone. Their yeere is divided
into 354. daies: for vnto sixe Theveereof A4rabianzs and
moneths they allot 30. daies, and vnto the other sixe but 29; all which
being added into one summe doe produce the number aforesaid: wherefore their
yeere differeth eleuen daies from the yeere of the Latines. They haue at

THE FIRST BOOKE OF THE
The yeere diuided into two seasons onely, V pon the moun/aines of A tlas.
diuers times festiual daies, and fasts. About the ende of Autumnne, for all winter,
and a great part of the spring they are troubled with boisterous windes, with haile,
with terrible thunder and lightning : yea then it snoweth much in some places of
Barbarie. The easterne, southerne, and southeasterne windes blowing in May and
Iune, doe very much hurt there: for they spoile the corne, and hinder the fruit from
comming to ripenes. Their corne likewise is greatly appaered by snow, especially
such as falleth in the day-time, when it beginneth to flower. Vpon the mountaines
of Atlas they diuide the yeere into two partes onely: for their winter continueth
from October to Aprill ; and from Aprill to October they account it summer:
neither is there any day throughout the whole yeere, wherein the tops of those
mountaines are not couered with snowe. In Numidia the yeere runneth away very
swiftly: for they reape their come in May, and in October they gather their dates:
but from the midst of September they haue winter till the beginning of Iauarie.
But if September falleth out to be rainie, they are like to lose most part of their
dates. All the fields of Numidia require watering from the riuers; but if the
mountaines of Atlas haue no raine fall vpon them, the Numidian riuers waxe drie,
and so the fields are destitute of watering. October being destitute of raine, the
husband man hath no hope to cast his seede into the ground; and he despaireth
likewise, if it raine not in Aprill. But their dates prosper more without raine,
wherof the Numidians haue greater plentie then of come. For albeit they haue
some store of corne, yet can it scarcely suffice them for halfe the yeere. Howbeit,
if they haue good increase of dates, they cannot want abundance of corne, which
is sold vnto them by the Arabians for dates. If in the Libyan deserts there fall out
change of weather about the midst of October; & if it continue raining there all
December, Iauarie, and some part of

DESCRIPTION OF AFRICA.

Februaire, it is wonderful what abundance of grasse and milke it bringeth foorth.
Then may you finde diuers lakes in all places and many fennes throughout Libya;
wherefore this is the meetest time for the Barbarie-merchants to trauell to the land
of Negros. Here all kinde of fruits grow sooner ripe, if they haue moderate
showers about the ende of July. Moreouer the land of Negros receiueth by raine
neither any benefite, nor yet any dammage at all. For the riuier Niger together with
the water which falleth from certaine mountaines doth so moisten their grounds,
that no places can be deuisd to be more fruitfull: for that which Nilus is to
Aegypt, the same is Niger to the land of Negros: for it increaseth like Nilus from
the fift of Iune the space of fortie dales after, and for so many Niger & Nilus.
againe it decreaseth. And so at the increase of Niger, when all places are
ouerflowen with water, a man may in a barke passe ouer the land of Negros, albeit
not without great perill of drowning; as in the ift part of this treatise we will
declare more at large.

Of the length and siziernes of the Africans liues.
A LI the people of Barbaric by vs before mentioned liue A vnto 65. or 70.
yeeres of age, and fewe or none exceed
that number. Howbeit in the foresaide mountaines I sawe some which had liued
an hundred yeeres, and others which affirmed themselves to be older; whose age
was most healthfull and lustie. Yea some you shall finde here of fowerscore
yeeres of age, who are sufficiently strong and able to exercise husbandrie, to
dresse vines, and to serue in the warres; insomuch that yoong men are oftentimes
inferiour vnto them. In Numidia, that is to say, in the land of dates, they liue a
long time: howbeit they lose their teeth very soone, and their eies waxe
woonderfully dimme. Which infirmities are likely to be incident vnto them, first
because they continually feede vpon dates, the M
THE FIRST BOOKE OF THE
sweetnes and naturall qualitie whereof doth by little and little pull out their teeth:
and secondly the dust and sand, which is tossed vp and downe the aire with
easterne windes entring into their eies, doth at last miserably weaken and spoile
their eie-sight. The inhabitants of Libya are of a shorter life; but those which are
most strong and healthfull among them Hue oftentimes till they come to
threescore yeeres ; albeit they are slender and leane of bodie. The Negros
commonly liue the shortest time of all the rest: howbeit they are alwaies strong and
lustie, hauing their teeth found euen till their dying day: yet is there no nation
vnder heauen more prone to venerie ; vnto which vice also the Libyans and
Numidians are to too much addicted. To be short, the Barbarians are the weakest
people of them all.

What kindes of diseases the Africans are subject vnto.

T HE children, and sometimes the ancient women of
this region are subject vnto baldnes or vnnaturall shedding of haire; which disease
they can hardly be cured of. They are likewise oftentimes troubled with the
headache, which usuallly afflicteth them without any ague joined therewith. Many
of them are tormented with the toothache, which (as some thinke) they are the
more subject vnto, because immediately after hot pottage they drinke cold water.
They are" oftentimes vexed with extreme paine of the stomacke, which ignorantly
they call, the paine of the hart. They are likewise daily molested with inwarde
gripings and infirmities ouer their whole body, which is thought to proccede of
continuall drinking of water. Yea they are much subject vnto bone-a ches and
goutes, by reason that they sit commonly vpon the bare ground, and neuer weare
any shoos vpon their feete. Their chiefe gentlemen and noblemen prooue gowtie
oftentimes with immoderate drinking of wine and eating of

DESCRIPTION OF AFRICA.
daintie meats. Some with eating of oliues, nuts, and such course fare, are for the
most part infected with the scururies. Those which are of a sanguine complexion
are greatly troubled with the cough, because that in the spring-seasone they sit too
much vpon the ground. And vpon fridaies I had no small sport and recreation to
goe and see them. For vpon this day the people flocke to church in grea t n.umbers
to heare their Mahumetan sermons. Now if any one in the sermon-time fallles a
neezing, all the whole multitude will neeze with him for companie, and so they
make such a noise, that they neuer leaue, till the sermon be quite done; so that a
man shall reape but little knowledge by any of their sermons. If any of Barbarie
be infected with the disease commonly called the French poxe, they die thereof
for the most part, and are seldom cured. This disease beginneth with a kinde of
anguish The French and swelling, and at length breaketh out into sores. Ouer the
mountaines of Atlas, and throughout all Numidia and Libya they scarcely know
this disease. Insomuch that oftentimes the parties infected trauell forthwith into
Numidia or the land of Negros, in which places the aire is so temperate, that onely
by remaining there they recover their perfect health, and returne home sound into their owne countrie: which I saw many doe with mine owne eies; who without the helpe of any phisitian or medicine, except the foresaide holesome aire, were restored to their former health. Not so much as the name of this maladie was euuer knowne vnto the Africans, before Ferdinand the king of Castile expelled all Iewes out of Spaine; after the returne of which Iewes into Africa, certaine vnhappie and When and by what meanes lewd people lay with their wiues; and so at length the the Frenchpoxe was brought disease spread from one to another, ouer the whole region: into Africa. insomuch that scarce any one familie was free from the same. Howbeit, this they were most certainly perswaded of, that the same disease came first from Spaine; where-

TIIE FIRST BOOKE OF TIHE fore they (for want of a better name) do call it, The Spanish poxe. Notwithstanding at Tunis and ouer all Italie it is called the French disease. It is so called likewise in Aegypt and Syria: for there it is vsed as a common prouerbe of cursing; the French poxe take you. Hernia orthe Amongst the Barbarians the disease called in Latine disease called bursting or the Hernia is not so common; but in Aegypt the people are rupture. much troubled therewith. For some of the Egyptians haue their cods oftentimes so swollen, as it is incredible to report. Which infirmite is thought to be so common among them, because they eate so much gumme, and salt cheese. Some of their children are subiect vnto the falling sickness; but when they growe to any stature, they are free from that disease. This falling sickness likewise possesseth the women of Barbarie, and of the land of Negros; who, to excuse it, say that they are taken with a spirite. In Barbarie the plague is rife euery tenth, fifteenth, or twentieth yeere, whereby great numbers of people are consumed; for they haue no cure for the same, but onely to rub the plague-sore with certaine ointments made Earth of Ar- of Armenian earth. In Numidia they are infected with nienia. the plague scarce once in an hundred yeeres. And in the land of Negros they know not the name of the disease: because they neuer were subiect thereunto.93 The commendable actions and vertues of the Africans. THose Arabians which inhabite in Barbarie or vpon the coast of the Mediterran sea, are greatly addicted vnto the studie of good artes and sciences: and those things which concerne their law and religion are esteemed by them in the first place. Moreouer the y haue beeene heretofore most studious of the Mathematiques, of Philosophie, and of Astrologie: but these artes (as it is aforesaid) were fower hundred yeeres agoe, utterly destroyed and taken away by the chiefe professours of their lawe. The 182 DESCRIPTION OF AFRICA. inhabitants of cities doe most religiously observer and reuere those things which appertaine vnto their religion: yea they honour those doctours and priests,
of whom they learne their law, as if they were petie-gods. Their Churches they frequent verie diligently, to the ende they may repeat certaine prescript and formal prayers; most superstitiously perswading themselues that the same day wherein they make their praiers, it is not lawfull for them to wash certaine of their members, when as at other times they wil wash their whole bodies. Whereof we will (by Gods helpe) discourse more at large in the second Booke of this present treatise, when we shall fall into the mentioning of Mahumet and of his religion. Moreouer those which inhabite Barbarie are of great cunning & dexteritie for building & for mathematicall inventions, which a man may easily conjecture by their artificiall worke. Most honest people they are, and destitute of all fraud and guile; not onely imbracing all simplicitie and truth, but also practising the same throughout the whole course of their Hues: albeit certaine Latine authors, which haue written of the same regions, are farre otherwise of opinion. Likewise they are most strong and valiant people, especially those which dwell vpon the mountaines. They keepe their couenant most faithfully; insomuch Tke Moores are a people of that they had rather die than breake promise. No nation greatfldeitie. in the world is so subiect vnto jealousye; for they will rather leese their lives, then put vp any disgrace in the behalfe of their women. So desirous they are of riches and honour, that therein no other people can goe beyonde them. They trauell in a manner ouer the whole world to exercise traffique. For they are continually to bee scene in AEgypt, in AEthiopia, in Arabia, Persia, India, and Turkie: and whithersoever they goe, they are most honorably esteemed of: for none of them will possesse any arte, vnesse bee hath attained ynto great l.xcqtness and perfection

THE FIRST BOOKE OF THE therein. They haue alwaies bee much delighted with all kinde of ciuilitie and modest behauiour: and it is accounted heinous among them for any man to vtter in companie, any bawdie or vnseemely worde. They haue alwaies in minde this sentence of a graue author; Giue place to thy superior. If any youth in presence of his father, his vncle, or any other of his kinred, doth sing or talke ough of loue matters, he is deemed to bee woorthie of grieuous punishment. Whatsoever lad or youth there lighteth by chaunce into any company which discourseth of loue, no sooner heareth nor vnderstandeth what their talke tendeth vnto, but immediately he withdraweth himselfe from among them. These are the things which we thought most woorthie of relation as concerning the ciuilitie, humanitie, and vpright dealing of the Barbarians:- let vs now procede vnto the residue. Those Arabians which dwell in tents, that is to say, which bring vp cattell, are of a more liberall and ciuill disposition: to wit, they are in their kinde as deuout, valiant, patient, courteous, hospital, and as honest in life and conversaation as any other people. They be most faithfull observers of their word and promise; insomuch that the people, which before we'said to dwell in the mountaines, are greatly stirred vp with emulation of their vertues. Howbeit the said mountainers, both for learning, for vertue, and for religion, are thought much inferior to the Numidians, albeit they haue little or no knowledge at all in naturall philosophie. They are reported likewise to be most skilfull warriours, to be valiant, and exceeding louers and
practisers of all humanitie. Also, the Moores and Arabians inhabiting Libya are somewhat ciuill of behauiour, being plaine dealers, voide of dissimulation, fauourable to strangers, and louters of simplicitie. Those which we before named white, or tawney Moores, are stedfast in friendship: as likewise they indifferently and fauourably esteeme of

DESCRIPTION OF AFRICA.

other nations: and wholy indeuour themselues in this one thing, namely, that they may leade a most pleasant and iocund life. Moreouer they maintaine most learned professours of liberall artes, and such men are most deuout in their religion. Neither is there any people in all Africa that lead a more happie and honorable life.

What vices the foresaid Africans are subiect vnto.

Euer was there any people or nation so perfectly endued with vertu e, but that they had their contrarie faults and blemishes: now therefore let vs consider, whether the vices of the Africas do surpasse their vertues & good parts. Those which we named the inhabitants of the cities of Barbarie are somewhat needie and couetous, being also very proud and highminded, and woordenfully addicted vnto wrath; insomuch that (according to the prouerbe) they will deeply engrawe in marble any injurie be it neuer so small, & will in no wise blot it out of their remembrance. So rusticall they are & void of good manners, that scarcely can any stranger obtaine their familiaritie and friendship. Their wits are but meane, and they are so credulous, that they will beleue matters impossible, which are told them. So ignorant are they of naturall philosophie, that they imagine all the effects and operations of nature to be extraordinarie and diuine. They obserue no certaine order of liuing nor of lawes. Abounding exceedingly with choler, they speake alwaies with an angrie and lowd voice. Neither shall you walke in the day-time in any of their streetes, but you shall see commonly two or three of the m together by the eares. By nature they are a vile and base people, being no better accounted of by their gouernours

THE FIRST BOOKE OF THE

then if they were dogs. They haue neither iudges nor lawyers, by whose wisdome and counsell they ought to be directed. They are utterly vnskilfull in trades of merchandize, being destitute of bankers and money-changers: wherefore a merchant can doe nothing among them in his absence, but is himselfe constrained to goe in person, whithersoeuer his wares are carried. No people vnder heauen are more addicted vnto couetise then this nation : neither is there (I thinke) to bee found among them one of an hundred, who for courtesie, humanitie, or deuotions sake will vouchsafe any entertainment vpon a stranger. Mindfull they haue alwaies beene of iniuries, but most forgetfull of benefites. Their mindes are perpetually possessed with vexation and strife, so that they will seldome or neuer shew themselves tractable to any man ; the cause whereof is supposed to be ; for that they are so greedily addicted vnto their filthie lucre, that they neuer could
attaine vnto any kinde of ciuilitie or good behauiour. The shepherds of that region liue a miserable, toilsome, wretched and beggerly life: they are a rude people, and (as a man may say) borne and bred to theft, deceit, and brutish manners. Their yoong men may goe a wooing to diuers maides, till such time as they have sped of a wife. Yea, the father of the maide most friendly welcommeth her suiter: so that I thinke scarce any noble or gentleman among them can chuse a virigne for his spouse: albeit, so soone as any woman is married, she is quite forsaken of all her suiters; who then seeke out other new paramours for their liking. Concerning their religion, the greater part of these people are neither Mahumetans, lewes, nor Christians; and hardly shall you finde so much as a sparke of pietie in any of them. They haue no churches at all, nor any kinde of prayers, but being utterly estranged from all godly deuotion, they leade a sauage and beastly life: and if any man chanceth to be of a better disposition (because they

DESCRIPTION OF AFRICA.

haue no law-giuers nor teachers among them) he is constrained to follow the example of other mens liues & maners. All the Numidians being most ignorant of naturall, domestickall, & commonwealth-matters, are principally addicted vnto treason, trecherie, murther, theft, and robberie. This nation, because it is most slauish, will right gladly accept of any seruice among the Barbarians, be it neuer so vile or contemptible. For some will take vpon them to be dung-farmers, others to be scullians, some others to bee ostlers,94 and such like seruile occupations. Likewise the inhabitants of Libya liue a brutish kinde of life; who neglecting all kindes of good artes and sciences, doe wholly apply their mindes vn to theft and violence. Neuer as yet had they any religion, any lawes, or any good forme of liuing; but alwaies had, and euer will haue a most miserable and distressed life. There cannot any trechery or villanie be inuented so damnable, which for lucres sake they dare not attempt. They spend all their daies either in most lewd practises, or in hunting, or else in warfare: neither weare they any shooes nor garments. The Negros likewise leade a beastly kinde of life, being vttterly destitute of the vse of reason, of dexteritie of wit, and of all artes. Yea they so behaue themselues, as if they had continually liued in a forrest among wilde beasts. They haue great swarmes of harlots among them; whereupon a man may easily coniecture their manner of liuing_: except their conuersation perhaps be somewhat more tolerable, who dwell in the principall townes and ciites: for it is like that they are somewhat more addicted to ciuilitie.

Neither am I ignorant, how much mine owne credit The author of this worke his is impeached, when I my selfe write so homely of Africa, Apologief or the former vnto which countrie I stand indebted both for my birth,95 relation. and also for the best part of my education: Howbeit in this regarde I seeke not to excuse my selfe, but onely to

THE FIRST BOOKE OF THE
appeale vnto the dutie of an historiographer, who is to set downe the plaine truth in all places, and is blame-woorthie for flattering or fauouring of any person. And this is the cause that hath moued me to describe all things so plainly without glossing or dissimulation: wherefore here I am to request the gentle Reader friendly to accept of this my most true discourse, (albeit not adorned with fine words, and artificiall eloquence) as of certaine vnknowne strange matters. Wherein how indifferent and sincere I haue shewed my selfe, it may in few words appeere by that which followeth. It is reported of a lewd countriman of ours, that being conuicted of some heinous crime, he was adiudged to be seuerely beaten for it. Howbeit the day following, when the executioner came to doe his busines, the malefactor remembred that certaine yeeres before, he had some acquaintance and familiaritie with him: which made him to presume, that he should find more fauour at his hands, then a meere stranger. But he was fowly deceiu ed; for the executioner vsed him no better, then if he had neuer knowne him. Wherefore this caitife at the first exclaiming vpon his executioner, oh (saith he) my good friend, what maketh you so sterne, as not to acknowledge our olde acquaintance? Hereupon the executioner beating him more cruelly then before: friend (quoth he) in such busines as this I vse to be mindfull of my dutie, and to shew no fauour at all; and so continually laying on, he ceased not, till the judicall sentence was fulfilled. It was (doubtlesse) a great argument of impartiall dealing, when as respect of former friendship could take no place. Wherefore I thought good to record all the particulars aforesaid; lest that describing vices onely I should seeme to flatter them, with whom I am now presently conuersant; or extolling onely the vertues of the Africans, I might hereafter be saide to sue for their fauour (which I haue of purpose eschewed) to the end that I might haue more free

DESCRIPTION OF AFRICA.

accesse vnto them. Moreover, may it please you for this purpose to heare another resemblance or similitude. There was vpon a time a most wily bird, so induced by nature, that she could Hue as well with the fishes of the sea, as with the fowles of the aire; wherefore she was rightly called Amphibia. This bird being summoned before the king of birds to pay her yeerely tribute, determined foorth with to change her element, and to delude the king; and so flying out of the aire, she drencht herselfe in the Ocean sea. Which strange accident the fishes woondring at, came flocking about Amphibia, saluting her, and asking her the caus e of her comming. Good fishes (quoth the bird) know you not, that all things are turned so vpside downe, that we wot not how to liue securely in the aire? Our tyrannicall king (what furie haunts him, I know not) commanded me to be cruelly put to death, whereas no silly bird respected euer his commoditie as I haue done. Which most vniust edict I no sooner heard of, but presently (gentle fishes) I came to you for refuge. Wherefore vouchsafe me (I beseech you) some odde corner or other to hide my head in; and then I may iustly say, that I haue found more friendship among strangers, then euer I did in mine owne natuie countrie. With this speech the fishes were so perswaded, that Amphibia staied a whole yeere among them, not paying one penie or halfepenie. At the yeeres ende the king of fishes began to
demand his tribute, insomuch that at last the bird was sessed to pay. Great reason
it is (saith the bird) that each man should have his due, and for my part I am
contended to doe the dutie of a loyal subject. These words were no sooner spoken,
but she suddenly spread her wings, and vp she mounted into the aire. And so this
bird, to auoide yeerely exactions and tributes, would eftsoones change her
element.96 Out of this fable I will inferre no other morall, but that all men doe
most affect that place, where
189

DESCRIPTION OF AFRICA.
they finde least damage and inconuenience. For mine owne part, when I heare the
Africans euill spoken of, I wil affirme my selfe to be one of Granada: and when I
perceiue the nation of Granada to be discommended, then will I profess my selfe
to be an African. But herein the Africans shall be the more beholding vnto me; for
that I will only record their principall and notorious vices, omitting their smaller
and more tolerable faults.

NOTES TO BOOK I.
(i) In this etymology of Africa, Leo follows the Arab and Berber historians. Ifrikis
was a son of a king of Yemen, and the conqueror of Maghreb, "the West", to
which he gave the name of "Ifrika"Ibn Khaldun, History of the Berbers, ed.
vii), p. 21; Carette, Recherches sur Porigine et les migration des prinicpales
tribus de l'Afrique Sept. et pariculidrement de IA lgdrie (Expl. Sc. de l'Algérie,
vol. iii), p. 306; Mover's Die PhAnizier, vol. ii, 2nd part, P. 417; teste Tissot,
Geog. Compara de la Province Romaine d'Afrique, vol. i. p. 389. Some of the
legends affirm that this Ifrikis, Ifraki, Ifriki, or Ifricus (Ifrico in Leo's Italian), fled
from Egypt into Barca, when finding no sustenance for his followers, he sent
scouts out to Cyrenaica, in which land fit for tillage -and pasture was reported,
and that the spies cried out, "Ber ! ber " "land ! land !" which explains the origin
of Berber and Barbary. But this legend looks too much of later origin, and,
according to Mr. Dupuis, who lived long at Mogador, is unknown to the people of
Morocco. The modem Arabs have no particular name for Africa, with which few
of them have any acquaintance beyond the region they travel over, or reside in.
Al Gharb, or Maghriba, that is, the west, is Barbary, the direction being its
bearing from Arabia and Syria, the focus of the Empire of the early Khalifs.
Maghrib or Magharib Mokribi, the first division west, is Cyrenaica, the Lybian
desert, and as far as Fezzan. Tripoli, Tunis, and Algeria, as far as Tenez, Tlemsen,
and Teggort, is Maghrib al-Wasat, the Central West, and Morocco is Maghrib al-
Aksa. Sahara is applied not so much to any particular desert, as to any sterile spot
in Africa or Arabia. Sudan, from Aswad, black, is a vague term designating the
entire country about the Niger, and so forth. The Arabs affirm that Africa is a
corruption of Al Mafrika, the ancient name of the country beyond the Nile
westward, this word meaning disunited or divided, implying that it was cut off
from Asia by the Nile. This is one of the legends preserved by Leo, and in Dupuis'
day, early in this century, was current among the Arabs of Morocco, though I have been unable to find any one now acquainted with it. A second tradition, not however so popular, is that the Red Sea was the dividing line, the water having

NOTES TO BOOK L
concentrated there after the deluge. Hence the opposite shore was called Mafrika. The Berbers know nothing of these legends, though they have a widespread legend that when the sea broke through the Strait of Gibraltar many kingdoms and cities were overwhelmed by the waters now occupying the Mediterranean. This belief the victorious invaders of Spain adopted in naming the points on the opposite shore of the Strait of Gibraltar, El Boghaz ("the barrier"), Terf el Gharb (Cape Trafalgar) and Algesiras (Al Jeseira), implying that these were parts of the Gharb, or an island of it, before the Atlantic (Bh’ar el Mh’eit) burst into what is now the Mediterranean (Bh’ar er Ruin, the Roman Sea).-Dupuis, Journal of a Residence in Ashantee, pp. lxxvii-lxxxiii; Davis, Carthage, p. 41.

Other etymologists incline to regard the word Africa as of classical origin. Africa is mentioned for the first time in two fragments of Ennius (who wrote in the interval between the two first Punic wars), though in a way indicating that the name was familiar to his readers. "Africa terribili tremit horrida terra tumultu, Undique..." (Annales vi); "Lati campi quos gerit Africa terra politos" (Satires III).

Isidrus Halpensis, Bishop of Seville (Etymologiarum libri, xiv, v. 2), who flourished about A.D. 630, fancifully traces Africa to africa, in allusion to its hot, dry, climate. Bochart (Chaanan, I, xxv), hardly less absurdly finds its origin in efer, dust; while Solinus (xxiv, 2), as is usual with the classical writers, inclined to fall back upon some mythological hero as the name-father of Africa. In this case it is Afrus, son of the Libyan Hercules. Suidas (sub voce "Apoi), looks to Afer, the son of Saturn and Philyra, as the progenitor of the Africans, while Josephus (Antiq., i, xv) preserves a Graeco-Jewish story, in which this Afer is transformed into a son of Abraham and Cethura, named Aphera, who succoured Hercules in the fight against Antzeus. According to Suidas, the ancient name of Carthage was "Aqpic. Hence, D’Avezac seizes upon the word as the origin of Africa. Afriquah was the Semitic radical, signifying distinct, different. Thus Africa was a distinct and separate colony from that of Tyre, which sent forth the Phoenician founders of Carthage, and thus the Arabs came to designate all the country in which the ancient Afriquah was established by that general name (Descrijbpion et histoire de l’Afrique ancienne, etc., p. 5). But even admitting that Carthage bore this name when the Arabs made its acquaintance, its position and importance did not warrant the ancient founders in regarding it as isolated from Tyre; and, moreover, Mahedia bore in the Middle Ages the name of Africa, so that a similar line of argument could scarcely apply to it. Carette (lc., p. 306) is more plausible when he tries to connect the name of Africa with the tribes of Aurigha, Afarik, or Ifurces of Corippus, who, driven into the Sahara, formed again as the Auraghen one of the most important fractions of the
NOTES TO BOOK I.

193

Azger Berbers. The name of Aurighia is indeed given to one of the principal dialects of the Tamashek language, and from the Aouragh Ibn Khaldun, traces the great Berber divisions of Sanhadja and Lamta. This powerful race anciently inhabited the sea coast, and may have given their name to the country around Carthage, just as the Greeks of Cyrenaica applied the term Libou, the first section of Berbers with whom they came in contact with, to the whole of Africa with which they were acquainted (Libya), an example which the Romans partly followed. Barth (Travels in North Africa, vol. i, PP. 339, 344). Nachtigal (Sudan, vol. ii, p. 223, etc.), tells us that the Kelowi of Air, not mentioned by Leo or any other writer before Horneman (Journal, etc., pp. 109 et seq.), belong, at least so far as the noble part of them are concerned, to the Aouragha, and hence their dialect is called Auragheye even at the present day. In the time of Abu-Obeid El Bekri (Description de l'Afrique Sefitentroniale, ed. Slane, pp. 13, 44), the Aouraghas inhabited the shores of the Gulf of Syrtis, and the districts of Kabes and Barca. It was here that Corippus, in the sixth century, placed the Ifurces (Vivien de St. Martin, L'Afrique dans l'Antiquité, pp. 150, 151; Mignard, Hist. générale de La Tunisie, p. 223). In reality, however, these etymologies seem rather far fetched-Auragha, Aferik, or Ifrikia, Afer, Ifurac, or Africa. Africa is really a Latinised form of the original Afer, which in its turn may be derived from the once powerful Iibre (Meltzer, Geschichte der Karthager, vol. i, p. 433), and it is quite certain that Africa was used by the Romans in the restricted sense of being applied to the territory of Carthage, the part of Tunisia comprised in that area being still called Frikia or Ifrikia. Edrisi gives an Itinerary from Misr (Cairo) to Ifrikia as followed by the Almoravides in A.D. 530. It ends at Sidjilmessa (near Tafilet).-Edrisi, Description de l'Afrique et de l'Espagne, ed. Dozy and De Goeje, pp. 194-5.

(2) Gaoga, as we have seen (p. 100), and shall see more fully by-and-by, is identical with what the Bornu people call Bulala. If this is the case, the Desert of Gaoga is some of the barren country not far from the western shore of Lake Chad, which is the only large sheet of water in that direction, and might readily be supposed to be the source of various rivers. Lake Fitri, which is in the middle of the Bulala country, is too small to be taken into account.-Nachtigal, Sudan, vol. ii, p. 333; Barth, Travels, vol. iii, p. 427.

(3) Eloacat, a "citta" in a district to which Leo gives the name of Alguechet (Bk. vi), which seems to have consisted of more than one oasis, is evidently the Al Wahat, or Desert of the Oases, a vast desolate tract in the Libyan Desert, behind the western ridge of

194

NOTES TO 1300K I.

mountains which bounds the Nile valley. Ibn el-Wardi (Unio Miraculorum, De Sacy in Notices et extraits des Manuscrits de la Bibl. du Roi, Pt. ii, 1789), and Leo include this district as a separate division of Africa, between Barca and Egypt. The oases are several in number, those which contribute to the Egyptian
revenue being: the Greater Oasis, or El Wah el-Khargeh, or Menamun, Leo's Eloacat (El Wakat), and the Lesser Oasis the oasis larva of the Romans, or El Wah elGhtriebie, or El-Behesa or El-Mendisheh, Leo's Gerbe and the Al Alv h't or Al What of Edrisi. (Hartmann, Edrisii Africa, PP. 489, 491), the Wah el-Hayz, the Wah of Farafrah, the Oasis of the Blacks (Wady Zerzure), discovered by an Arab at the beginning of this century, the Wah el-Siwah, the Oasis of Ammon, Gebabo, Tazerbo, Rebiana and the Wah el-Dakhel, sometimes also called the Wah elGharbie, though this term is usually applied to the Lesser Oasis. The author of Murray's Egypt (p. 371), notes that the name of "Dakhel", or "receding", is given in opposition to "Khargeh", or "projecting", the latter projecting towards Egypt. But the oases are still imperfectly known, and may be the palm-bearing spots which, according to Edrisi, extend to Kuka and Kawar.- Rennell, Geog. of Herodotus, p. 564 ; Murray, Hist. Account of Discovery and Travels in Africa, vol. ii, p. 191 ; Lucas, Tro'sierme Voyage fait en 1714, t. ii, p. 206; Browne, Travels in Egypt and Syria, p. 132, 186 ; Brugsch, Reise nach den grossen Oase el-Khargeh in der libyschen Wiiste (1876) ; Rohlf's, Drei Monate in libyschen Wiiste (1875), etc.

(4) This is the place more frequently mentioned than visited, under the name of Nun (Noon) Gudnun, Inun (Inoon), or more frequently Wadinun, Wadnun (Wadnoon); but the latter name is properly only applied to the Assa ka River, on which it is situated, some twenty or thirty miles from the Atlantic. Wadnun is, therefore (as translated), merely the "the river of Nun", and the term is applied to the neighbouring territory, which also bears the name Jezula (Guzzula) (Leo, Bk. ii). It is doubtful whether Nun is the Nul in the Lanta country mentioned by Edrisi; the chief basis for this conjecture being the similarity of names and the fact that neither Leo nor Marmol make any mention of Nul (Dozy and Goeje's ed. of Edrisi's Description de lAfrique et de lEspagne, pp. 65, 66). Not far from Agadir there are vestiges of Tul, ruined by the Shereefs in 1517, but which in the days of Diego de Torres (Istoria de los Xarifes, p. 63) was well peopled and very rich. The modern Nun is in Sidi Hisham's country, a part of Sus, where the Sultan's authority is not recognised, and most of the people are Berbers. The town is large and rather picturesque, and well built, and is the meeting-place for caravans between Mogador in Morocco and Timbuktu. The place, according to Arab legend, derives its name from Nunnah, a queen of

NOTES TO BOOK I.

their race who reigned in Portugal. That is, of course, a modern fiction ; but the authority for the note to Davidson's African Journal, 1835-6, p. 84, that Nun is "properly Nul, and was so named when the Arabs possessed Portugal" is not mentioned. Cape Nun, owing to a confusion regarding the two rivers, is not near what used to be called the Wad Nun, but on the north side of the Wad Draa mouth.

(5) Shawy (see also Bk. vii), a place near the mouth of the Shari River, a feeder of Lake Chad. "It is obvious . . . . that the name Seu is the root of the appellative Showy and the name Shouaa, respectively given by Denham to a town on the
Shary, and the Arab tribes inhabiting the adjacent country."—Cooley, Negroland, etc., p. 130 n.

(6) Most of these places will be noticed at a later stage. Monachism was introduced in the Empire of Prete Gianni (Prester John) about the year 470, since which time it has been a power in Abyssinia. But though Leo and most of the writers after the fourteenth century came to the conclusion that the seat of the semi-fabulous Christian monarch, who had so long been sought for, was in Abyssinia, it is doubtful whether the earlier legends of his existence originated out of the semi-Christianisation of the Negus and his subjects. Central Asia, India, East Africa, and other regions, were all at different times rumoured to be the home of "Presbyter Johannes". At least as early as J497 the Abyssinians possessed a chapel and an altar in the church of the Holy Sepulchre in Jerusalem, though Marco Polo, writing not far from the close of the thirteenth century, mentions that a mission was sent from the King of Abyssinia to make offerings on his part at this particular shrine. The Abyssinians also possessed the church of St. Stephen in the Vatican. At the end of the fifteenth century indeed about the time Leo wrote-Joao I I of Portugal made enquiries of "Abyssinian monks who visited those Spanish regions, and through certain friars who went from this country to Jerusalem". It may have been some of these scar-faced friars whom Leo saw.—Oppert, Der Prysbeter Johannes in Sage und Geschichte (1870) ; Zarncke, Der Priester Johannes (1876-79); D'Avezac, Recueil de Voyages et de Memôrres, vol. iv, pp. 547-564 ; Alvarez, Narrative of the Portuguese Embassy to Abyssinia (Hakluyt Society, i88x), etc. The "certaine Mahumetan" among them ("un signore Maumettano") might havebeen some Galla chief. For the Gallas, many ofwhom overran Abyssinia from a very early to a very late period, were Mohammedans, while every now and then some other powerful Moslem obtained a hold on the country: hence Leo's allusion may be of very general N2

NOTES TO BOOK I.

application. The "Moors" of Adel and Zeila continually warred against Abyssinia, and in 1513 the Negus sent to request the help of Portugal against them, the result of which was the fleet and embassy of which Alvarez was a member. In 1528, two years after Leo's narrative was published, a great army of Moslems under Mohammed Gragn entered Abyssinia from the low country, and compelled the Emperor to take refuge in the mountains. In short, the "signore Maumettano" was a standing trouble to Abyssinia from a very early period, and has remained so to this hour, though possibly the "signore Italiano" may before long take his place. In the geographical jumble regarding the Niger as identical with the Nile, etc., Leo is only following the cosmography he had picked up in Italy; thus, as usual, proving a poor comparative geographer, but an admirable descriptive one. Thus he follows Pliny in making the "Nigris" identical with the Nile, and forming the boundary between "Africa" and Ethiopia on the frontier of Gaetullia, and in Book IX he expressly admits that he considers a river called the Ghir the same as Ptolemy's Niger (Niger, N'tup), which might or might not be the river now called by that name. But Cooley (Claudius Ptolemy and the Nile, p. 6) is entirely
mistaken in affirming that Leo by the Nile meant the Senegal. He possibly
confused some of the rivers in that section of Africa; but from the names of the
kingdoms on its banks it is certain that it was the Niger he was describing so far
as his own knowledge went, and so far as the information of the Arab traders
enabled him to write at second hand. What may have puzzled him, as it puzzled
many of his predecessors and successors, was finding the Niger first flowing east
and then south. But it must be noted that long before Reichard, in 1802, suggested
that the Niger found its way westward into the Atlantic by many mouths, Leo had
positively asserted this to be the case. His other notion about the Nigro-Nilotic
hydrography was of course wrong. Yet it was not more erroneous than many
theories held up to the close of the controversy by the arrival of the Landers at the
Nun mouth in 1830. Even so astute a geographer as Rennell was inclined to regard
Wangara as its delta, and that its waters spread out by inundation into shallow
lakes in the interior, which might, under the burning rays of a tropical sun, be
completely evaporated. In other words, they disappeared in a "sink", like so many
of the smaller streams in the Western American desert. Murray, a compiler of
excellent judgment, writing in 1817, almost scoffs at Reichard's idea of the Niger
finding its way into the Gulf of Benin, as "supported by no evidence"; and
Jackson, who resided in Morocco, stoutly contended (1800) that the Nile of the
Blacks (the Niger) was the same with the River of Egypt. There is evidence that in
speaking of "our cosmographer" he is referring to Ibn Batuta.--Lee's edition, p.
236.

NOTES TO BOOK 1.
(7) Don Pedro Navarro (Conte Pietro Navarro), took Bugia in 1508.
(8) These names are for the most part those of well known places or of villages or
towns no longer in existence. For instance, among the "townes" of the Western
Barbary Sahara, Teguat (misprinted Tegvad in Temporal's translation, and Tegua
in Pory's version) is Touat, and Tsabit is doubtless the Tsabet mentioned by El'
Aiache in his journey from Morocco to Tripoli, in 1662-63 (Berbrugger, in Exhl.
Scienfhque de /4lgerie, vol. ix, p. 21). Sagelmess is identical with Tafilet. Zeb,
Zibin, or Zaab, is the Zebe or Zabe of the old writers. "Zabe, supra montem
Aurasium ad Mauritaniam pertinientem, Sitiphem metropolem habens"
(Procopius de Bello Vandalico, lib. xi, c. 2o). It is the Al Zeb of Albfeda.
Biledulgerid (Bled el-Terrid) is the Arabic name for the "Dry Country", or the
region south of the Atlas, or bordering on the Desert.
Tesset may be Tossout, where there are ruins of Texouda, called Tezzota by Leo.
Dare (Dara in the Italian) is Dra, though, were it not shown by the context to be
different, it might be Dahra. Tebellelt is an oasis south of Tafilet. Todga or
Toudga are the Berbers near Buglia, to whose mountain villages the tribal name is
applied, though Tolga, not noticed by Leo, is one of the most ancient towns of
Zab, and, therefore, Todga may be a misprint for it. Fighig is the oasis of Figuig.
Tegort may be another way of spelling Tegurt (elsewhere Tchort), or it may be
El-Gattar, the ancient Tagora. Guarghela is Warghla, and Mesab, Mzab. Pescara
is Biskra, noticed by Ibn Khaled and El Bekri as the capital of Zab. Elborgh
(Elborgiu in the Italian) is the modem El Bordj. Hacca, Akka, Tegoranen, or Gonarara, is north of the Touat oasis. Deusen (Dousar) is still a village of Zab. Nesta, a misprint for Nefta. Teozar is Tozeur (spelled on p. 41 Teuzar). Capheza, Gafsa, or Cafsa, is the ancient Capsa. Mesellata (in the Mesellata mountains in Tripoli), Garian, Ghurion, in the same region, and others, are unnecessary to annotate at this place as they are mentioned more than once on subsequent pages. Pory, however, makes a serious blunder in writing the "isles of Gerbe (Gerbo in Temporal), Garion", etc. In the original it is, of course, "isola di Gerbe" (the island off which Leo was captured), the other places not being islands at all, but towns like Ghadames, and countries like Fezzan, far in the interior, or wide regions like that of Birdeoa (Birdeva) the home of the Bardoa, Berdoa, Birdera, or Berdera, branches of the Tibbu in Borhtu, Burgu, or Birgu, and Eloachet (the country of Eloacirt, though in the original the name is not given as in Pory), etc.

NOTES TO BOOK I.

Numidia, "the land of the Nomads", is for the most part in Algeria. (9) The Zenega seem to have extended from the Atlantic to the Salt marshes of Traz a, from Western Sus and the Wad Draa on the north to Timbuktu in the south. The Guanziga (the Zuenziga or Guaneeres of Marmol) roamed from Traz a to the desert of Air (Hair) and as far north as the Taflet oases, Tebelbelt, and Beni-Gumi, and southward to the kingdom of Guber. The Terga or Tuaregs were then, as now, the terror of all the desert area from Air (or Asben, not Ahir) to Iguidi; on the north as far as Tuat and the Wad Mzab, and southward to Agadez. In the desert of Iguidi on to Berdoa the tribe of Lenta held sway, being bounded northward by the oases of Wargla, Teggort, and Rhamades, and southward by the kingdom of Kanro. The Berdoa, or Birdeoa in the original Italian (p. 14), were in Leo's day the predominant race between the deserts of Iguidi and Audjila, not extending further north than Fezzan or Barca, or further south than Bornu, while in the Audjila Desert the Lenta, or Levata, were masters, their range being probably as far as the Nile. These races, as we may find occasion to notice, have, by the encroachment of other stocks, the occupation of the country by the whites, or by their own advances, considerably altered their range since the date mentioned.-Carette, Exfl. de l'Algrie, vol. iii, pp. 52-53.

Azaohad (Azaoad) is the district of Azawad, an extensive region to the north of Timbuktu. The name Asawad is an Arab corruption of the Berber word Azawagh (pronounced Azawar), which is common to many desert tracts. Azawad proper is a most sterile country, and has been so characterised by all Arab travellers from Ibn Batuta to Leo Africanus, though to the wanderer in these wastes, not familiar with more fertile regions, it is a kind of desert paradise, having in favoured spots plenty of food for camels and a few cattle. It is dotted with four small towns, the most noted of which is Arauan, a great outfitting place for Timbuktu caravans, the Berabish chief of which, Hamed Weled 'Abeda Weled Rehel, murdered Major Laing. The original inhabitants of Azawad seem, from the prevailing dialect, to have been Songhay people (Barth, Travels, vol. v, pp. 459-465; Lenz, Timbuktu,
vol. ii, p. 363, where this region is called EI-Azauad). Caillié mistook the name Azawad, which he writes Zawat, for that of a tribe (Travels to Timbuc/oo, vol. ii, p. 97, etc.); Leo's etymology of Air, "ma nomato dalla bonta dell' aere", is apocryphal beyond arguing. (io) For notes on these Niger kingdoms, see Introduction. Bito is the Berde of Denham and Clapperton (Narrative of Travels

NOTES TO BOOK I.

and Discoveries, vol. ii, p. 218) ; the Bedde of Barth (vol. iv, p. 32, and iv, 613), adjoining or comprised in Bornu. Temian may be an error for Yemyen. Dauma is probably the Doma of some maps, and the country on the right bank of the Benue. Medra may be Mandara, one letter being obliterated in Leo's Arabic notes. Goran (in Marmol Gorhan, a form also adopted by Pory), which Leo frequently refers to, can be no other spot than Kordofan. This name might easily by negligent writing become Korhan, or, as Leo, uniformly writing Ke) with a g and omitting the aspirates, would represent it, Goran. Cooley, Negroland of the Arabs, pp. 129-30. Marmol in copying this passage (vol. i, fol. 15) omits Dauma, and substitutes for it Mandinga. Leo's remark about the safety of travelling on the Niger is almost identical with what Ibn Batuta says. "A traveller may proceed alone amongst them without the least fear of brigands, or robbers, or ravagers" (Leo's edition, p. 240; Defrémery and Sanguinetti's edition, vol. iv, p. 421). Leo, also, in describing the negroes as leading a "brutish kind of life", agrees with the old Tangier vagabond, who describes the free women as never clothing themselves until after marriage, and the greater part of the people as eating the stinking dead bodies of dogs and asses. (II) The etymology of "Berberi" and Barbary is still very dubious, and likely to remain so. The Berbers are the race which forms the ethnic substratum of the greater part of North Africa. Even yet they are a powerful stock, though their domain has been much encroached upon by the Arabs. Their various sections are the Shluh (Southern Morocco, the Zaylah of Macrizi), Tuareg (Sahara), and Berber people of Tunis, Algeria, and North Morocco, divided into numerous tribes. But Berber is not the name they apply to themselves. Their general natural name is Amazirgh, Amazigh, or Amashek, i.e., "freemen"—a description specially claimed by the Riff people of Morocco-and their language Tha Tamashik, or Tanazigt, a word which, stripped of the prefix and the post-fix t (Keane), is identical with the Mct of Hecatmus, the Mdeug of Herodotus, the M-tzeg of Ptolemy, and the Maxitani of Justin; though quite as likely these people might be the fraction of the race now known as Maschouacha or Machouch (Chabas, Etudes sur l'Antiquité historique etc. pp. 189, 227). The word Berber is, perhaps, simply a corruption of the Roman Barbari, Barbarian, and their country Barbaricum, the land of the Barbarians, or Barbary, as it afterwards came to be called. This is, moreover, rendered more probable by the fact that at the date of the Arab invasion the name was applied to the people of Southern Morocco. In A.H. 62, Okba-ben-Nafih, proposing to pass from Tangier to Algesiras, was
warned by the Governor of Tangier not to leave in his rear the "Berber nation-inhabitants of Sus, a people

199

NOTES TO BOOK I.

without religion, who ate the carcasses of animals, drank wine, knew not God, and lived like the brutes". Accordingly, he marched against their country (Cha'ab-ed-Din, "The Book of Pearls" in Notices des Manuscrits de la Bibl. imhe-riale, t. ii, p. 157). There was also a region in Mauritania Tingitana which was assigned to the Barbari. After this period the name of Berber replaced the Latin Libyi, and the Arab geographers applied the new title of Beled-al-Berber, the Berber country in Barbary, to all the region of North Africa between Barda and the Atlantic, that is, to the ancient Libya, though Maghreb or Belad el-gharb is also used to indicate the direction of this country from Arabia. Abd el-Bar, writing in the fifth century of the Hegira, derives the name from Ber, son of Kis-Ril−n, one of the first Kings of Egypt who invaded the Maghreb, "Ber-berra," his countryfolk said, "Ber has retired into the desert", and since that period the name Berber has come into use. Finally, Tabari relates an even more puerile tale of Afrikis having established a colony of Amalekites in the country to which he gave his name. They murmured at having been sent so far from home. "The Canaanites grumble" (berberna), was the King's remark: hence the name of the new African colonists! (Cha'ab-ed-Din, 1. c., p. 151.) At all events, the word Berber, plural Beraber, has now been quite adopted into the Arabic and Berber languages, with various grammatical forms.-Lerchundi, Vocabulario Español-Arabigo del Dialecto de Moruecos, 1892, p. 139.

It will be noticed that Leo never uses the word Kabai'le, now so universally applied in Algeria and Tunis to the Berber tribes, and even to those of Arab origin. "Kabyles" are, indeed, regarded as equivalent to the mountain races. But the word is Arab, though it came in with the conquest of Barbarossa and the rule of the Turks, so that in all likelihood the Arab traveller never heard it employed in the present sense. In Turkish a tribe is Silsilet, in Arabic K'bil, or plural, Kabail, and came to be applied to the tribes from hearing the Arab using it in saying that such a K'bil is so and so. We even see in telegrams of French origin the Morocco tribes called Kabyles, though not a word of Turkish is spoken in that empire. The FrancoTurkish "Pacha" is universally used by the Europeans under the form of "Bashaw", to designate the governor of a Moroccan province, though the word is quite unknown to the people themselves. Kaid, with various modifying terms, being the title of all government officials. During the Melilla troubles in 1894 the Turkish title of "Bey" was even applied to the Moroccan official stationed on the mainland, which proved how little either Madrid or Paris knew about the ethnology of Mulai el Hassan's empire. Moor (Maure, Moro) is another word strange to both Arabs and Berbers. It seems derived from the old Mauri, and, therefore, is applicable to the Berbers alone.

200

NOTES TO BOOK I.
But it is popularly considered the national name of the races inhabiting Morocco, the Negroes and Jews excepted. In reality the "Country of the Moors" is quite as much in the other Barbary States. It has, however, no precise meaning, though as the Berbers and wandering Arabs are tolerably clearly defined, and not much mixed, the term might be reserved for the mongrel races inhabiting the towns, many of whom have European blood in their veins. In Spain "Moro" became and continued to be almost synonymous with a Mussulman. At the period that Pory wrote—and sometime before and afterwards—by "Moors" was meant almost any Mohammedan people, not negroes: in Africa especially it was used in the loosest possible manner. The "Koulouglis", or offspring of Turkish fathers and Arab, Berber, or slave mothers, were peculiar to Algeria, Tunis, and Tripoli, though in the former country they have now ceased to be distinct from the other races, most of the Turks having left on the French capture of Algiers and the other cities in which they were numerous. Duvivien, Recherches et Notes sur la fortion de l’Algérie au sud Guelma, etc., pp. 57-58; Carette, Exhblor. de PAlggrie, vol. iii, pp. 13-18; Castiglione, Mimoire glografihique et numismatique sur la partie orientale de la Barbarie appelie Afrika fiar les Arabes, suivie de Recherches sur les Berbkres A tiantiques, anciens habitans de ces contrties, pp. 83-97; Shaler, Sketches of Algiers, pp. 84-105, and Nouv. Annales de Voyages, t. xxvii, p. 83; Fournel, Les Berbers, p. 32; Ibn Khaldun, Histoire de tAfrique sous les Aghlabites et de la Sicilie sous la dominion Musulman, trad. par N. Desvergers, and Histoire des Berbers (Slane tran.). Ibn Khaldun repeats the Arab story, which Leo follows with variations, about Berber being a corruption of the Arabic word berberat, unintelligibly applied to their language by Afrikis, "son of Kis, son of Safi", the Yemen King, who conquered Africa, and gave his name to such parts of it as were then known (note I, p. 19). Tissot (La Province Romaine d’Afrique, vol. i, pp. 393-97) is not inclined to accept the current etymology of Berber, which, really originated with Gibbon (Decline and Fall of the Roman Emfiire, vol. iii, p. 226). He notes that Pliny mentions among the natives of Africa firofria the "Sabarts", whom Ptolemy calls Μα6ουp3j3oupΕ; while, according to Herodotus, the same name Bap3apoi was applied by the Egyptians to a race living on the Nile Valley. Even yet the name Brabra (pl. of Berber) is given to the Sena5.ri Nouba and Kenous. In ancient times the Somali country was known as Barbaria, and in the Periplus of the Erythrean sea another Barbaria is the country of the Troglodytes, and so on, though not improbably these names were given for exactly the same reason that the Greeks and Romans called all races outside their citizenship Barbarians, and their country Barbaria. It may also be noted that there is still a Beni-Barbara tribe in southern Tripoli, and the

NOTES TO BOOK I.

Beni-Barbar in the Aures (Vivien St. Martin, Le Nord de L’Afrique, etc., pp. 208-209). But all such etymologies are mere guesses, and only worthy of recalling in so far that they may possibly give a clue to the origin of the widespread Berber race.
Hippolytus (Lib. G/niral, vol. ii, p. IOI : Chronicon Paschale, Ed. Bonn, fide Barth), it may be noticed, enumerates among African tribes "Afri qui et Barbares", and in the Itin. Antonini, p. 2, the Macenites Barbari are mentioned. Barth would fain have connected the Warwaren, a tribe of the Azkar Imghad, a negroised and degraded race in a condition of serfdom to the ruling race of the Imoshagh, with the Latin Barbari. But" war", a syllable with which a great many Berber names begin, seems to signify "man".

(12) From these remarks of Leo, it would seem that previous to the sixteenth century theories on the origin of the Berbers (or Africans) had been quite as numerous as since that date. The one which he adopts from Edrisi and also from IbnKhalfun, is that still in favour with learned Arabs. But, unfortunately, it is, if not worse than its rivals, decidedly no better. Jews are undoubtedly amongst the oldest of the foreign colonists of North Africa. Ancient tombstones buried under the sands are said to exist in Sus, and the late Rabbi Mordakkai Ali Sourour, of Akka, believed that he had found in the Daggators, a barbarous tribe of the Sahara between Morocco and Timbuktu, an ancient Jewish colony (Bull. de Soc. Glog., Paris, 1877, pp. 345-370, and Bull. Alliance Israelite, 1882; and Duveyrier, Bull. de Soc. Glog., 1876, p. 129). To this day they are found living among Arab and Berber tribes, though not speaking any language except that of their neighbours, and in the Atlas there is more than one tribe which are affirmed to have been originally Jews. The all-pervading Phcenicians, also, had settlements on the Barbary coast, and it is quite possible that the story in Procopius (De Bello Vandalico, Lib. ii, p. 222, Edit. 1531) that at Tangier there used to be a pillar on which was an inscription stating that the people who erected it had fled from the wrath of" the robber Joshua, son of Nun", was correct. (See also Lee's edition of Ibn Batuta, p. 18.) But all of these people were at most mere colonists, and influenced the population of the country very little. The Berbers are unquestionably of a much older date, and must have originated in a very different way from what Leo and other theorists have imagined. Dr. Slane considers that the similarity of the Berber language to the Semitic type was marked in its triliteral roots, the inflexion of the verb, the formation of derived verbs, the gender of the second and third persons, the pronominal affixes, the aoristic style of tense, the whole and broken plurals, and the construction of the phrase, whereas it differs from it in the dative of the third personal pronoun and in the mobilisation of the pronominal affixes. But in spite of the many

NOTES TO BOOK I.
Arabic words introduced intomodern Berber (in some dialects almost a third), an interchange reciprocated, as in Tangier, where the basis of the population is Berber, and the tongue is now-either radically or by adoption of words from their neighbours-marked by Hamitic, and has no links which unite it to the Semitic tongues, the belief of certain philologists to the contrary notwithstanding. (Renan, Revue des Deux Zfondes, 1er Sept., 1873.) But though it differs from the Coptic or Hausa in conjugation, declension, and vocabulary, it is considered by Keane to be distantly related to the old Egyptian and the Bega Somal, Galla, and other
Ethiopian languages of North-Eastern Africa. The Berber tongue, with various more or less distinct dialectic differences, is spoken from the Siwah oasis to the Atlantic, including most of the Sahara; and on the Temple of Karnak, dating from Rameses II (circa 1400 B.C.), the word "Beraberata" occurs in an inscription. Yet this and other facts do not justify the inference that the Berbers spread from the Nile valley to Morocco; it is just as reasonable to conclude that the course of their migration was in an opposite direction. There is, indeed, a great deal to be said in favour of the belief that the Berbers were the stock who inhabited the British Isles, France, and Spain prior to the Celtic invasion, and whose slow retreat into and through Northern Africa may be traced by the rude stone monuments, of the Stonehenge type, found in all these countries, and which they were building after the Roman invasion of Africa, tombs of that character being found in Algeria, built on Roman roads. The Caucasian cast of face thought to be generally characteristic of the Berber is, perhaps, more imaginary than true, and had better not be made the basis of any hypothesis regarding their origin. Nor do I think much ought to be founded on the occasional fair-haired and light or grey-eyed families found among these people. The many European races, including the Vandals under Genseric, and the endless European slaves who, turning renegade, became absorbed into the population, must have left their mark over all the Barbary States. The flow of European blood is markedly noticeable in Fez and other cities of Morocco, and also among the town population of Algeria and Tunis; and red-haired and short-faced Berbers and Arabs are not infrequently seen in the interior of these countries, pointing to reversion, through the law of atavism, to, it may be, a distant northern ancestor, or possibly to a Hibernian renegade of less remote date. Yet, leaving out of account these familiar facts, the Egyptian monuments of the 14th and 15th centuries B.C. depict the Libyans (Berbers) as pink complexioned, blue eyed, and fair or red haired, so that in this case the "white" Berbers referred to may be only survivals of the original stock now reduced to duskeness by the infusion of Arab or Sudanic blood, conclusions, for many reasons, not untenable. Among the Kelowi, for instance, the chief must not

NOTES TO BOOK I.

marry a woman of Targi (Tuareg) blood, but can rear children only from black women or female slaves. In Asben, again, if a man marries a woman from a distance, he must go and live in her village; and in some tribes the custom still prevails of the sister's son inheriting instead of the reputed son of his father. (Barth, Travels, vol. i, p. 341.)

The absence of any traces of foreign tongues among the Berbers must not be accepted as a proof of their not being mixed with the dbbris of the Greek, Roman, and Vandalic colonies, since we know the rapidity with which a language can be lost. The writer is acquainted with the children of French and other renegades who do not know one word of their father's mother-speech; and considering that before the arrival of the Mohammedans the Berbers had received a veneer of Christianity without anything except a very doubtful trace now remaining, the loss
of an even more evanescent culture need not excite wonder. Yet, to a certain extent, traces of the civilization with which they came in contact remain. As Sir Lambert Playfair remarks:—"The religious persecution of the Arians and Donatists, which so effectually opened the way for Islamism, no doubt drove many of the poorer members of these colonies for safety to the mountains, where they soon became mixed up with the aboriginal inhabitants. There can still be traced among their customs the traditions of Roman law and municipal institutions, and one frequently meets amongst them types, easily recognisable, of the Latin and Germanic races. Some have supposed that the crosses which Kabyle girls are in the habit of tattooing on their faces are remnants of the Christian faith. Many of their families had, no doubt, European ancestors, dating from long after the extinction of the Romans. Their own traditions assert this fact, and the beauty of the women of Alt Ouaguennoun, which is proverbial in the country, is regarded as a proof of their foreign origin. The Arab element amongst them was introduced later, less by actual conquest than by the moral influence of Islam, and the institution of slavery has had the effect here, as in all Mohammedan countries, of introducing black blood into the mixture."—Playfair, Algeria and Tunis, p. 7; Tissot et Broca, Sur les monuments megalithiques et les populations blondes du Maroc (Revue d'Anthropologie, No. 3, 1876). M. Rinn will even go so far as to make the Berber language and alphabet parent to the Greek and Latin (Les Origines Berberes, etc., 1889). If, however, the origin of the Berbers is still a moot question, their spread over Africa is even more speculative. They were very probably the colonists of the Canaries, though it is more difficult to accept Dr. Brinton's belief that they were the founders of Etruria, and the parents of the mysterious Etruscans (Proc. American Philos. Soc., February 10th, 1890). David Urquhart (The Pillars of Hercules, 1850), amid much material not

NOTES TO BOOK I.

altogether to the purpose, insists on the relationship of the Berbers to the Celts, and on the remnants of Christianity among the former. Now that the Iberian theory renders it admissible to recognise the Berbers as akin to, if not identical with, the races who preceded the Celts, his speculations deserve more attention than they originally received. Admitting the truth of the theory mentioned it could scarcely mean that Celtic words crept into the Berber language—or vice versa—and it is curious to find a peculiar form of brooch used in the Highlands of Scotland and in Ireland, in use all over Northern Africa among the Berbers. The lingering traces of Christianity are more dubious. St. John's day, or Midsummer, is celebrated as "el inserah", and the old style European calendar—is still maintained among them with a sort of water clock, consisting of a basin with a hole in the bottom. The Virgin Mary is still revered in certain parts of Morocco, and it is said that the women in the agony of child-birth will cry "Oh Maria !" But how much of this is invention, and how much the eager desire of theorists to justify their preconceived notions, is not worth arguing.—Meakin, Journ. Anthk. Institute, Aug., 1894.
What Pory translates "tawnie Moores", with deliberate disregard of Leo's text, and Florianus "Subfuscii", is, in the original, "Africani bianchi" (white Africans), and "I Bianchi dell' Africa" (the whites of Africa), that is, the Berbers, to distinguish them from the Negroes. The word "Moor", as used by Pory and by all the writers of his time, *and, indeed, subsequently, in a very loose way, is almost equivalent to Mohammedan. Leo never calls the Arabs "Africans", they being immigrants from Arabia into Africa, though no doubt well known as individual settlers and traders long before they invaded Barbary in A.H. 27 (A.D. 647).

Zanhagi (Senhadja, Sanhagia, Sanagia, in the original Italian); Musmudi (Musmuda, Masmuda) in the original; Zeneti (Zeneta in the original); Hacari (Aoara in the original), Havara (Haoura of other orthographers); Gumeri (Gumera in the original, Gomara, Gumeral, the Rdemara of other writers), probably intended for Komera (Leo always using g in the k sounding). For the range and migration of these tribes see Carette, Exfiloration de PAlgdrie, vol. iii, pp. 48-313, et fassim; Mercier, [Jistoire de PiAfrique Sefitentrionale, t. i, pp. 179-189. The Zanhagi still exist, much reduced from the day when they contended for thrones in the Hadjutes of the Mitidja. The name of the Zeneta was famous in Moorish Spain. The Haora are still found near Medeah, and the fame of the Gomera still lives in El Pefion de Velez de Gomera, the Spanish presidio in their country, which in the Middle Ages was called "Ghommera", a name then applied to the 205

NOTES TO BOOK I.
Morocco provinces of El Garb and Rif, extending from the River Mullica to Tangier.-(Ibn Khaldun, Hist. des Berbtres, vol. ii, p. 134; Fey, Histoire d'Oran, p. 8.) About A.H. i i6, the Gomera founded a petty dynasty in Ceuta, which, according to El Bekri, held power for three generations. The tribe-a fraction of the Musmudi-now exists in small septs near Oran, and in other places; the village of Rommera, on the Wad Rir near Teggort, another in the Jebil-buKahil, and considerable numbers of their race in the Ziban Oases, mark their migrations. In the Middle Ages, however, they were essentially Moroccan, and though they did not take a leading part in the commotions which put Berber chiefs on so many thrones, they seem to have been attracted to the "Ghomerra coast" by its vicinity to Spain.

"The riuer of Seruan" ("flume de Servi"). Here Leo translates into Italian the Arabic name of the Wad-el-Ahd, or River of Servants, a tributary or branch of the Wad Oum-er-bia, which falls into the Atlantic at Azamur. Pory, more acute than some of his successors, divined this meaning by his side-note, "Guadalhabis". Florianus, however, put it "ad flumen usque Serui", and Temporal, "au fleuve de Serui."

Haha, Sus, Guzula (near Sidi Honein ben Hashem territory).

This is an extremely mistaken rendering of "la riviera della Rif", riviera being here used in the sense of a sea-coast, as in the familiar "Riviera" bordering the Gulf of Genoa. Here -it means the well-known Rif or Riff country. There is no river of that name, though Florianus, who led Pory astray, has "fluvium occupat
qui ille Rifa appellatur", and, next sentence, "hic fluvius". Even Temporal, a much more careful translator, blunders into "la riuire qui s'appelle Rif". Tremizen (Telensin) is the Algerian town and province of Tlemqen. Mauritania Cesariensis was Western Algeria, North Morocco, Mauritania Tingilana that is of Tingis or Tangier.

(i8) Temseena.
(i9) Miknasas.-Carette, ExfL de Algerie, vol. iii, p. 156.
(20) The Lemtuna (Luntuna) were originally from the Sahara, near the Upper Niger. Magraoa is Maghraua (Maghraoua, Magraoua).-Carette, Expl. de 'tAlgerie, vol. iii, pp. 16o et seq. : Mercier, Hist. de l'Afrique, vol. i, pp. i86, 217, 381, etc.
(21) Merakeh (City of Morocco) was begun in A.D. 1072 by Yusefben-Tachfln, founder of the Berber dynasty of the Almoravides, whose

NOTES TO BOOK I.

swoy was so brilliant. "El-Morabetin" is the more correct form of the word, Almoravides being a corruption of El-Morabetin, pl. of Morabet (" Marabout"), a pious person.

(22) This "principal Mahumetan preacher", who fabricated a genealogy which made him a descendant of Fatima and Ali, was a Berber Mohamed-ben-Abd-Allah, though generally known under the name of Ali ebn-Yussuff, Mohammed ebn-Tumert el Mahdi, "the leader" who, as has happened again and again, was to reform the faith at the close of a period fixed to suit this particular Mahdi's convenience. He called his disciples El-Mahaedu, corrupted into Almohades, that is to say, believers in one God, or Unitarians. The "Hargi" who first joined him, were the Hergha, who, like the Bentata, Timmal, etc., were of the Masmuda stock or tribe. He was a founder of the Almohade dynasty, which reigned from A.D. 1148 to 1269, so that Leo is quite correct in his statement regarding its duration. Abdo'l-wahed-al Marrekeshi, History of the Almohades, edited by R. Dozy, 2nd ed., 1881.

(23) This was Abdul-el-Munen-ben-Ali-el-Kumi-ben Wariagol whom the Mahdi met at Mellala, a small town belonging to the Beni Wariagol, a Sandhaja (Zanhaji or Sanhaji, written both ways in this paragraph) tribe allied to the Musmudi.

(24) The Beni-Merin dynasty reigned from 1269 (A.H. 668) to 1550 (A.H. 957), or rather longer than Leo allows-Mohammed-ebn-Ahmed el-Kazeri being the last of the line.

(25) "Banizeyan, the King of Telensin"-("Banizeyan re di Telensin")-must either have been a misreading of Leo's manuscript, or a loose way of applying the name of a dynasty to the occupant of a throne. For the Beni-Zeiyan were a family who reigned long in the Tlem-ên. There had always been a deep-seated hatred between the two families. But it did not break out into hostilities until the reign of Abu-Said-Othman, son and successor of Abu-Yahia Yaghhrmoraqen, when, in revenge for the latter refusing to surrender his rebellious son (Ibn-Otton), Abu Yakub-Yussuf, the Merinide Sultan, raided the Tlem-ên territory up to the very walls of the capital. This was in A.D. 1290 (A.H. 689).
A subsequent siege of eight years' duration was raised in 1308, in consequence of the murder of the Sultan of Fez. A third one began in 1335, and ended by the city falling into Merinide bands in 1337. In 1348-9 it was again lost, and for ages continued the centre of an oft-occupied battle-field between the Kings of Fez and those of Tlemqen. The Beni-Zeiyan dynasty was founded in A.D. 1283 (A.H. 637) by Yaghrmoraren-ben-Zeiyan, the Emir of the Berber tribe of Abd-el-Wahed (or, less accurately Ouad) : hence the Empire, which he extended until it was bounded by the Mediterranean on the north, the Mizab on the south-east, Figuig on the south-west, and the Sahara on the south, its neighbours being the Hafside Empire of Tunis, and the Merinide Empire of Fez and Morocco, is sometimes called that of the Abd-el-Wahedits. It lasted until 1554 (A.H. 962). The Sheikh Sidi Abu-Abd' Allah Mohammed Ibn Abd' el Djelil al Tenessy, Histoire des Bene-Zeiyan de Tlemffen, trad. de Arabe par l'Abb6 J. J. T. Barg6, 1852 ; Comjhlment de Histoire des B'ene-Zeiyan, 1887 ; Tlemffen, ancienne capitale du royaume de ce nora, 1859, Presse et Canal. "Tlem}en" (Extrait de lAfrique franfaise), 1889, etc.

"Likewise the progeny of Hafasa and of Musmuda are at variance with the King of Tunis," the original "guerregiarono ancora con Afaza i re di Tunis, i quali venero dalla origine di Antata stirpe di Musmoda"; that is, they engaged in warfare against the Hafsides, Kings of Tunis, who were sprung from the Hantata of the Musmuda tribe. The Beni Hafs, or Hafsite dynasty, was founded by a lieutenant of the Almohade Emir, the Sheikh Abu Zakaria Yaha, son of Abu Mahomed Abu-el-Wahed-ben-Abu-Hafs, who in the year 1228 (A.H. 626), taking advantage of the decay of the Almohade power, declared himself independent, and founded an empire which lasted until the Spanish Conquest in 1535; Abu Zakaria belonged to the Musmuda tribe, which also (we have seen) claimed the founder of the first Almohade Sultan as a member. The wars to which Leo alludes were in 1347, when the Merinide Abdul Hasan, taking advantage of the civil broils among the Arab Kings, attacked Spain, and remained master of Tunis after Abu Hafs, who had pursued him, was slain near Cadiz, though in 1236 Abu Zakaria had captured Tlem-en, Tafilet (Segilmen), and Ceuta. Two years later the Moroccans were defeated near Kairwan (Kairouan).-Mohammed-Ben-Abi-el-Raimi-el-Kairouan, Histoire de lAfrique, trad. de l'Arabe par MM. Pellissier et R-musat, pp. 164 et seq.; Fragment d'une histoire de la dynastie des Beni-Hafes, trad. par M. Cherbonneau.

(26) The "chronicles" referred to are those of Ibn Khaldun and Ibnu-r-Rakik (Ibna Rachu).
(27) Melle is still a very "mixed" empire.-Barth, Travels, vol. i, P. 341.
(28) Ak6l amazirgh. Yet Berber is the prevalent language of Morocco-Arabic only of its creed and government. One of the Almohade Sultans dismissed the officials of the great Karuin Mosque in Fez, because they could not speak Berber as well as
NOTES TO BOOK I.
Arabic. As a rule, the Berber women speak less Arabic than the men, and among the Tuaregs more of them, it is said, read than men (Meakin, Journ. Anth. Institute, Aug., 1894).
(29) Songhay or Sonhrai. (30) Valata. (31) Timbuktu.
(32) Gogo, or Gagho, or Gao, capital of the Songhay Empire.
(33) Gober. (34) Kano.
(38) Nubia. Leo's ideas of the relative positions of some of the kingdoms of the Niger region were rather vague, when he derives his knowledge second-hand; and his philology equally leaves something to be desired. For instance, the name Hausa seems to have been unknown in his days, or, at least, not within his knowledge. Else, instead of saying that the peoples of Zegzeg, Katsena, and Kano spoke the language of Gober, he would have noticed that they spoke the Hausa tongue, now so widely understood all over the regions in question, owing to the wandering habits and mercantile instincts of that intelligent race; though it is by no means to be inferred from Leo not employing so familiar a name that it was employed to designate the countries in which it prevails, or applied to the language itself subsequent to his day. Leo is also as much in error in saying that the inhabitants of Wangara (Guangara) spoke Gober (Hausa), as when he affirms that the Melli people spoke Songhay. Barth, Travels, vol. ii, p. 69.
(39) Some of the blunders in this and other succeeding paragraphs have already been pointed out in the Introduction. They are many and grievous, partly Leo's and partly those of Florianus, copied by Pory. "Califa Otman" (Hutman) is Othman the third Khalif. "Fower hundred yeeres of the Hegeira" should be 27 (A.D. 647). "Hucha Hilnu Nafisch" (Ueba Jebnu Nafic) is Sidi Okkba ben Nazic (Nacic, Nafa, or Nafaz), a vassal of the Khalifate of Cordova, and the "great citie" which he founded (A.H. 50, A.D. 670) was not Alcair (Cairo), but, as Leo very properly put it, Kairwan (Caravanserai or resting-place); the blunder of altering the name to Alcairan being that of Florianus in which Pory follows him, though with a note of interpretation. "The people of Tunis", is in the original "riviera di Tunis" (the coast of Tunis), which is more likely, considering that Kairwan is in Tunis, at about the distance from Carthage mentioned. "Romans or" is an addition; Leo mentions "Italiani" alone. Leo is also wrong in supposing that the Arabic and Berber are in any way akin to each other, or that the Arabic got so corrupted, and vice versa, that in time they became the same, or rather a compound language. They are still quite distinct, though with many words in common. Nor is there any ground for believing that the Berbers at large ever picked up the language of their European rulers.
(40) For correction of these dates and names, cf Introduction. The "schematicall Califa" was 'Abd al-Melik, the Omayyad Khalif of Damascus. The "noble" was
Koceila, a Berber who, after reigning for four years (683-688), was defeated and slain by Zoheir, and Kairwan recovered.

(41) Abul-Kanen, who took the name of El Ka'n-bi-Amr-Allah the Executor of the Commands of God-is Leo's Elcain. The troubles referred to originated with the capture of Kairwan and the siege of El Mehdia by Abu Yezid. He was succeeded as third Fatimite Khalif by his son Abu-Tahar-Ismail, surnamed El Mansur-bi-AmerAllah (the Victory by the order of God), from his success in Sicily, in Thiaset, and over Abu Yezid. His son, Mad Abu-Tumin, who took the title of El Mozz-li-din-Allah (the Exalter of the Religion of God), succeeded in A.D. 953. It was by his order that Abul-Hosein-Goher-el-Kaid, a native of Greece, who had been a slave of El Mansur, equipped a large expedition, through the Maghiel, during which he advanced to the gates of Fez in one direction and to Sus in another, everywhere recovering the provinces which had been filched from the Khalif. He even conquered the Riffias. As El Kaim died on the Ist May, 946, and Egypt was not invaded until twenty-three years later, all of Leo's subsequent narratives about El Kaim and Gonha must refer to El Mo-azz. There is, indeed, no reason for believing [that El Kaim ever was in Egypt.-D'Herbelot, Bibiothecque Orientale (1697); Morgan, History of Algiers, pp. 173-74) where the facts are taken from Herbelot.

(42) Abu-Bekr the first rightly directed Khalif-" El Abbas".

(43) Goher conquered Egypt in A.D. 969 (A.H. 358), and after driving Abul Fowaris, the deputed Akshid ruler, from Fostat, the old capital, laid the foundation of Mısır-el-Kabireh (the modern Cairo, Alchair of Pory), originally called El-Mansoor-i-yeh, but afterwards re-named from the planet Mars (Kaher) being in the ascendant on the night that the foundation was laid. The Khalif of Bagdad in 969 was Al Mufaddh al Moti (944-974), also known as Ibn Bouyeh (which Leo corrupts into El uir = El vir) the founder of the House of Bouyeh, who renounced the temporal power of the Khalifs. At Goher's solicitation, El Mo&zz removed his court from Damascus to Cairo in A.H. 365.

NOTES TO BOOK I.
Goher founded the great mosque of El Ahazar, which, as a seat of Moslem learning, soon became a rival to the "University of Fez", and eventually was a centre to which students flocked from all parts of the Mohammedan world, until its ruin.-Quatrem-re, Vie de Moezz.

(44) Gabes.

(45) Yussuf ibn Tachfin, the Almoravide, began to reign in A.D. 1061 (A.H. 453). He took Tunis in 100, and died in 106 (A.H. 500) at the reputed age of one hundred.

(46) Abu-YussefYakub-el-Mansur, son of Abd-el-Mumen, A.D. i 1631184 (A.H. 558-580). He was an Almohade, but the third, not the fourth King of that dynasty. "Muachedin"=El Moahedoun, or Mowahadi, as the word is still pronounced in Moroccoc. The money called "Maravedi" derives its name from this famous Berber line of sovereigns.

(48) The Hapites.
"Iquali sono detti Arabi barberi", who are called "Barbary Arabs".

Arab historians are not in accord regarding the tribes which entered Africa from Arabia about the year 1048. According to Kairou, they were the Beni-Riah, the Beni-Zegba, and a part of the Beni-Amer and the Senan. If we are to credit the chroniclers, the Beni-Zegba were after some time driven from Africa by the Beni-Riah and replaced by the Beni-Kara. Marmol simply expands the account which he found in Leo. The Cachin he calls Esquequin, the Hitell the Beni-Helala, and the Machill the Mahquil, and both historians derive their information from Ibn-u-r-Rakik (Ebn-er-Rak'ik).

The Cachin seem to have been divided in Leo's day into Ouled Hadad (Etheq of Pory, Etegi of Leo, who invariably omits the aspirates), scattered through Tunis and the Moroccan provinces of Dukkala and Teda, Sumeit (Sumait) inhabiting parts of eastern Libya, on the borders of the Tripolitan deserts, and the Said (Sahed), roaming over Tunis, between the city of that name and Kairwan, and in numbers on to the Desert of Barca. The Elledji, or Delleg (Ouled-el-Hadj), Elmurtseg (Ouled Miutafik or Halotes), and Sobair, which Leo makes out to be fractions of the Etegi, Marmol classes as separate tribes, but the Amran-Lilali, Amran-Distani, Ako-Zuberta, Bu-Arez, and Farack, he puts into the former position.

The Garbia-Yeecha and Ohled-Chiadma inhabiting the sanne provinces 02

NOTES TO BOOK I.

as the Etegi, are noted by Marmol but not by Leo. The Hilel, Ilel, or Beni-Helal, Leo divides into Benihemir (Beni-Amer Benien of the Italian original), and numerous races between Tlemgen and Oran Riah (Ric, Rich), Sufien, and Chusain Cusain (Djochen).

The Beni-Amer he sub-divides into Hursan (Uroa, Ouled Hurua, on the borders of Mostagamen), Hueben (Ucba, Ouled Okba), Habrum (Abru, Ouled Iabra) and Mussem (Muslem, in the deserts of Msiila, considered by Carette to be the Beni-Msellen, established in the upper part of the plain of Hodna). The Riah Leo divides into the Deuvad (Daouaouda), Suaid (S'aid), Afgeg, (Asge, Azgueh), Elcherith (Elcherit, Ouled-el-Krid, E-Akhdar, or Khadr), Enedri (Enedr, Ouled-Nader, or Fader), and Garfam (Garfa, Ouled-Garfa).

The Machel (Mahquil, Makel) he divides into three tribes--the Mastar, the Hutmen (Utmen, Ouled Othanna), and Hassan (Assan, Ouled Hassan). The Mastar are further sub-divided into Ruchen (Ruche, Ouled Ruke, in the deserts of Dader and Ferkala) and Selim (Ouled Selim, near Vad Draa). The Othanna are split up into El Hasi (Elesin, Hoceine) and Chinan (Chenana, D'jaouana); while the Ouled Hassan were in 150 divisible into Deuihessen (Deviessen, Dui Ilassane), Deuimansor (Devimansor, Dui-Mansur), and Deuubai-duilla (Devu-bei-dulla, Dui*-Obei'd-Allak). The Dui-Hassane were sub-divisible into Dulein (Ouled Delein), Berbus (OuledBerbesh) Vodein (Vodei, Oudaia, in the desert between Wadan and Walata), Racmen (Racme, Rehanna, or perhaps Rokaitate), Hamran (Amir, Ouled Amer); the Dui-Mansur into Hemrun (Emrun, Amran), Menebbe (Menebali), Husein (Usein, Hoceine), and Albuhousein (Abulhusein,
Ouled-bu-'Hoceine). Finally, the Dui-Obeid-Allah were split into four fractions—the Garag (Garagi, Kharad), Hedeg (Edegi, Hedad), Teleb (Thda leba), and Geoan (D'jaouana). Different historians differ widely as to the number of tribes, their classification, and their relative rank, and the difficulty of making out Leo's meaning is not rendered any easier by his entire lack of system in translating Arabic words into Italian, and by the carelessness of Pory and other translators or copyists in gratuitously altering these into names which have only a resemblance to the original, and are the designation of no races or places in Africa or elsewhere. However, all the tribes named by Leo are perfectly well known, and most of them still exist in greater or less numbers scattered throughout Northern Africa. Thus the Ouled-l'Akub noticed by Marmol corresponds to the Ouled-l'akabez-Zraa, a tribe of the Wad-Mzab. The Ouled-Ta'alba (Mahquil) are still, as in the sixteenth century, scattered from the desert of Numidia to Jekdent; indeed, a tribe called Ta'alba exists in Wanseris, another in Kabylia, and a tribe as a fraction of the Beni-Bel-Hacen, who live with the Beni-Dja'ad. In Morocco, the Ouled-Deleim, the Ouled-

NOTES TO BOOK 1.
Berbesh, and the Oudaia (Mahquil) are still, as four centuries ago, established in the dry country between Senegal and the Atlantic. The great race of the Beni-Helala, or Helala, who furnished so large a contingent to the population of Algeria, have left their name in the Ouled-Helal of the Tell, and in a glen, called Helala, near the source of the Wad-Souflat (Carette). The endless revolutions and civil broils of Barbary have, in the course of four centuries, made such changes in the distribution and status of the tribes that Leo's classification is valuable only as expressing the views held in his day, or by the Arabic authors whom he followed. Even then he admitted it not only difficult "ma impossibile recordarsi", all the tribes then existing, and which have ever since been splitting up, or leaving off, or reuniting, trying to massacre and exterminate each other, or having the same unkindly intention carried into effect for them by the successive masters of Barbary-Arab, Turk, and "Christian". "Leo, from Ib'n al Rakik, the African chronologist" (writes Morgan Cancelliere to the British Consulate in Algiers), "gives an ample account of these Arabs. He says they were ten Tribes or Families from Arabia Deserta, and half the inhabitants of that Region: with many from Arabia Felix, tho' to all he gives three general names: But the sub-divisions he makes 600, many of which he mentions by Names still in being, and some I have never heard of: tho' that is no Argument of their Non-existence: And, I believe, that had he swelled the Number of petty Divisions, including the Moors, or natural Africans, to 6,000, he would not much have overshot himself; they being almost enumerable."—A Complete History of Algiers, p. 175.

"Ait," it may be noticed, is the ordinary Berber prefix for a tribe, though some have adopted the Arabic Ben. "Ida" and "Doui" (the latter thought by Renon to be originally Adoui) are possibly derivatives of that word, though, as in the above list, the latter is commonly employed by Leo and Marmol in the nomenclature of Arab tribes of Devi-Massur, Devi Huberdalla, etc., and to this day is found in Algeria (the Doui-Mnia, the Doui-Iahia). "Oulad" is a tribe, and "Hel" (e.g., Hel-
'Ang-ad) may be an abbreviation of it. Renon, "Description géographique de l'Empire du Maroc" (Exploration scientifique de PAlgérie, vol. viii, p. 46); Marmol, L'Afrique (d'Ablancourt's trans.), vol. i, pp. 75-86; Mercier, Histoire de PAfricé Sefitentionale, vol. ii, pp. 8-14; Carette, Exploration scient. de l'Algérie, vol. iii, pp. 433-441; Accardo, Ripertoire alphabitique des tribus et Douars de PAlgérie dress, d'aprs les documents officiels (1879), passim. (51) In Morocco. (52) Agadez. (53) Algiers, Ed. Djezair. 213

NOTES TO BOOK I. (54) Sallerc and Mekines (Mequinez), or that part of Morocco comprising the old kingdom of Fez. (55) Mostaganem in Algeria. The Ouled Hura is the tribe noticed (n. 50). (56) Ucba, Ouled-Okkba. (57) Miliana in Algeria; Meliana in the original. (58) Abru, same as Habrum in the preceding paragraph. (59) Msila. The desert (deserto) not deserts (deserta, Florianus), mean here simply lands uninhabited by settled races. Msila town was, according to El Bekri, founded by Abu-l-Kasem-Ismail-ben-ObeidAllah, the Fatimite, A.H. 313 (A.D. 925-26), who traced out the walls of the city with the point of his lance as he galloped on horseback. In A.D. 1088, Msila was destroyed, and its inhabitants transported to Kalaâ. Again rebuilt, the walls were once more levelled, sixty years later, by the Zanata, and, after being a second time reconstructed, Msila suffered a sack at the hands of the Hafsite Abu Yahea. (60) Azaphe is Saffi; Heah, Ha'ah. Hemran is the Ouled-Amran of Sedgelmessa, which is the modern Tafilet. The great tribe of the Hilal-Ben-Amer and Solein belonged to the Morler family of Arabia, established in the middle of the eleventh century in the Desert of Hedjaz, close to the province of Nedj, when they were let loose on Barbary by the Khalif EI-Mustansir lilah Abu-Timin-Ma'add, in order to revenge himself on his representative in that region who had proclaimed the authority of the Abassides in Kairwan. The worst wars of this section of Northern Africa began. The Nile crossed, they rushed on the province of Barca like famished wolves on a flock of sheep, and while some of the invaders abandoned themselves to internecine quarrels, the Riah, under their chief, Munes-ben-Yahia, marched to robbery, murder, and outrage. "They seemed", wrote Ibn-Khaldun, less than 30o years after their arrival, "like a cloud of locusts, and destroyed everything in their path", thus fully confirming the character which Leo gave them in 1501. It is doubtful, however, if they were quite so numerous as Leo and Marmol make them out to be. (61) Jebil-Dades and Farkala, an oasis just beyond, on the desert side of the Atlas. (62) Ouled-Selim. Dara, Darha, the Wad-Dra. They still traffic to Timbuktu. (63) "Elasim", Ouled-el-Haqen (note 5o). 214
NOTES TO BOOK I.

(64) "Chinana', Ouled - Kenana, Elcaluth (Elcubut), Holotes (note 50).

(65) Ouadan (Wadan), Oulata (Walata). "The Duke of Gualata" is in the original "signore de Gualata in Terra negra", the last two words (in Negroland) being omitted by Pory.

(66) Hacha. Acca, Akkaba, an oasis of Sus, on the caravan route to Timbuktu.

(67) "Hamrun" is not the Ouled-Anran, for Leo has "Amer" as the Ouled-Amer, who are inhabitants of the "deserto de Taganot" and have relations with the community of Tagavost (Tagaost), this remark being transferred by the translator to Tesset.

(68) Dehemrum (Deemrun) is apparently another form of Amran (p. 212, note 50), a tribe which roamed to the south of Tafilet (Sedjelmassa, or Segelmesse), and on to the Desert of Iguidi (Ighid), intersected by the caravan route from Akka to Timbuktu.

Todgatan is Todga in the original (Todra ?), an oasis north-west of Tafilet (or Tafilet).

Tebelbet is another oasis south of the Tafilet Sibka, with, like all these oases, villages and date palms. Dara is Dra.

(69) Matgara is the district called Medrara by El-'Archi el MulaAhmed, the Berber traveller, who passed through this region in the year 1661 (A.H. 1073) on his way to Mecca. He also mentions the Ouled 'Abd-Allah ben-'Amar. The Wader-Retib is also among his notes (Exil. Scientifique de PAllprie, p. 8). Vide also Book Vi.

Garseluin is Guers-'Aluin, where, in Leo's day, the province of Sgedelmessa began in the Atlas. Eddara is Ed Dra, the desert through which the Dra runs when there is any water to fill its bed, and which was then the territory of the Abulhusein (Ouled-Abu-el-Houcein).

(70) Ouled-Garradji, in the Beni-Gumi and Figuig deserts.

(71) Ouled-Hadadji, in the Desert of Angad.

(72) That is, the Ouled-Taalba inhabited the Metidja and the Numidian Desert to Takdemt.

(73) Tedes.

(74) Gehoan= Ouled-Djohai dispersed among the Garadji and Hadadji tribes.

(75) Schachin, a variant of Cachin (note 50).

(76) Their favourite genealogy is, at best, not based on historical evidence, and is evidently derived from the mythical Hebrew legends

215

NOTES TO BOOK I.

or inventions. The division into Arab or pure, and Mostareb (MusAraba, Mustehgeme in Leo's Italian) or adscititious, is more substantial, as this classification is very ancient.

(77) This description of the Terga, Tawarek, or Tuareg applies quite accurately at the present day : dress, ways of life, food, manners, and morals, seem not to have altered much in four centuries. On this subject there are some judicious remarks in an anonymous review of Denham and Clapperton's Travels and Discoveries,
The practice of paying tribute or, as it is called in many parts of Africa, "hongo", still prevails. This "custom due" is known as gherama, which Leo corrupts into gabella. "Ma le carivane che passano per li deserti loro sono tenuti di pagare ai lor principi certa gabella."

"Mill and panicke"-miglio e di panico-are simply varieties of millet (Panicum). P. miliaceum is the common variety. Pasfialum exile is generally cultivated in Africa, as is also Egyptian millet or Guinea corn (Pennisetum typhoideum). In Central Africa many of the Tuareg from Bornu to Timbuktu subsist on the seeds of "uzak" (Pennisetum distichum), out of which, also, they make a pleasant cooling drink. Its little burr-like seeds, by attaching themselves to every part of the dress, are a constant annoyance to travellers. The so-called "India millet" or durra (Sorghum vulgare) is, perhaps, the chief African corn plant. The woolly-looking material about the spathes of palm leaves is still used to make clothing, not only in Africa, but in various other parts of the world.

Parts of this description have, however, been freely translated. Thus Temporal (twice) puts sheep into the bill of fare of the "good prince" (who is, however, in the original only "buono uomo"; he is at best "il signor")-"grandi quantate de chameaux jeunes et vieux avec autant de Moutons et quelques autruches". But Leo says nothing about mutton, and Pory's "camels of all kindes" is more precisely indicated: "molti cammeli, e giovani e vechi, e insieme alt re/tan/i castrati, e certi struzzi." Again, in serving up the roast ostriches, no mention is made of the "sundrie kindes of herbes and spices" being from Negro land ("della Terranegra"), an omission also in Florianus, though not in Temporal. The Dutch translation is so frequently abridged and free that I have purposely not collated it. "His nobilitie" is, in the original, "nobili e parenti"-nobility and relatives. Ostriches are now much scarcer in the Sahara, though their feathers still come with the caravans to Tripoli.

216

NOTES TO BOOK I.

(78) In reality, the migration commenced before the time of Islam, when Wargla or Tuat were occupied, and the black races originally inhabiting those Saharan oases driven south. Leo, it seems, considered that this forcible exile of the Tuaregs to the desert began soon after the great exodus of Arabs into Africa, at the instigation of Ahmed ben 'Ali-el-Jerjerano, who died in 1044-5 (A.H. 436), and not a few years later under the Vizier, El Yezuri (note 60, Barth, Travels, vol. iii, p. 226).

(79) The country women in Morocco, and other parts of Barbary, do not alw.ys veil themselves specially before Christians, holding that Infidels are not worthy of being treated with such decency. In the interior towns, however, they will turn their faces to the wall, and possibly-if any of the faithful are within earshot- suggest to the unbelieving Nazarene that the fire is lighted for him. If no one is looking, and the lady is young, she may likely enough be more complacent.

(80) With henna juice (Lawsonia inermis).
"A French crown"-"uno scudo"-a ducat.
"Hen's dung and saffron"-"fumo di gulla e di zafferano"-really smoke of plants and saffron. Pory's very free mis-reading being due to Florianus, "Confiscunt
tamen aliquando e galle fumo atque croco", etc.
The mention of the women going to war with their husbands is interesting. For the
Zemmur people, near Rabat, in Morocco, and other tribes, still do so, the women
loading their lords' muskets, and exhibiting a ferocious courage quite equal to that
of the men.
(81) The character which Leo gives the people of this coast still applies almost
literally. In some recent consular correspondence it was shown that the slave trade
is on occasions secretly carried on, and they are in no respect to be trusted.
Indeed, Leo shows a better knowledge of the character of its wild kindred than
many Europeans, who have again and again perished by putting too much
confidence in the romantic legend about the stranger being safe in an Arab's tent
if once he has broken the Bedouin bread.
(82) "Urbs," which is again referred to in Bk. v, is, perhaps, the ancient Orba,
Obba, or Abba, the position to which Leo assigns it being marked by a quantity of
ruins, belonging, possibly, also to Larilus; Mannert, Gdographique ancienne des
Etsa/s Barbaresques (Ed. Marcus et Duesberg, 1842), pp. 394, 687, 688. Edrissi (t. i,
pp. 259-268), in his remarks on Arbes, seems to confirm the conjecture. See also
El Bekri, p. 13o; Ibn Haukal, "Description de l'Afrique (Journal Asiatique, 1842,
p. 223), and Gurin, Voyage Archiologique dans la Rlgence de Tunis, t. ii, pp. 86-
87).

NOTES TO BOOK I.
(83) These Soara, Soava, and Zouara, are identical with people whom Marmol
calls Azuagues, who in his time existed in considerable numbers in the Tamesna
and Fez provinces (Morocco), and in Tunis and Belad-el-Jered, and at present
inhabit the Zouara country not far from Tunis—the town of Zouara, north of Tunis,
indicating the limits of their range in that direction. They were known from the
fifth century before the Christian Era, as the Z=27mg of Herodotus, but have
undergone many migrations since that period. The incident described by Leo
took place in i5oo, so that he might have been personally acquainted with what, as
a naturalised Moroccan Arab, he seems to take a pride in. The people of Belad-el-
Tered, having revolted against the King of Tunis, marched towards Constantine,
at that time under the Hafsites, and gained such an advantage over the Governor
of Malai, Nazir, son of the Emir Mohammed, that he had to fall back on the city
with 2,000 horsemen. This victory gave the tribesmen great dclat, and determined
many others to make common cause with them. The insurgents pursued their
march into the mountains of Kabylea, where, in the Jurgura range, they
established a principality called "Cuco" by Marmol. This appears to have been a
Zouara confederation, of which the memory still exists in the town of Kouko.
Towards the close of the sixteenth century offshoots of them occupied Jebel-
Zarhun, near Fez, and other parts of Barbary.—Carette, Exhlor. scient. de PiAlgrie,
vol. iii, pp. 278-315.
If by this juxtaposition of Arianism and St. Augustine Leo would wish it to be inferred that the Bishop of Hippo favoured that heresy, it is almost unnecessary to say that he is wrong. Nor is it quite correct to say that Augustine was an "African Christian" in any heterodox sense. For, though a native of Tagaste, he was a convert of Ambrose, Bishop of Milan, and a violent opponent of the Donatists and Pelagians. The rest of Leo's remarks about Christianity in Africa may be accepted as merely his own speculations mixed with admitted historical data.

The Berber alphabet, now scarcely known among the Morocco tribes, seems, in spite of the theories which derive it from Roman or Greek, or vice versa, to be of prehistoric origin—though this was hot suspected until 1822, when Dr. Oudney discovered its existence in the Tuareg country. Specimens of this "tafinagh" writing are to be seen on various rocks in the Sahara and Barbary. "Tafinagh" is a Punic word, "finagh" being, indeed, equivalent to "Phcenician". The letters, variously named at pp. 32-35, closely resemble old Semitic forms, and, apart from the name applied to the language, there is almost a certainty of Phcenician origin. Perhaps a careful search of the ancient female ornaments in Morocco might reveal traces of the old character; for though the Berbers speak various dialects, their language from

NOTES TO BOOK I.

Tangier to the limits of the Tuareg range is fundamentally the same as it was when St. Augustine wrote (De Civitate, xvi, p. 6): "In Barbary we know many people with one tongue." About the only volume of any importance in Berber is the "Tuawahid" (The Unity of God), written by the Almah-Sultan, Mohammed ebn Tumert, who is the author of the "Murshidah" also, to convince his Berber followers of the truth of his mission as the Mahdi. The Musmudi tribe being unable to speak Arabic, the Sultan counted the words in the first chapter of the Koran, and, calling as many men, seated them in a row, and named each one with a word. Then, each pronouncing his name in order, they repeated the chapter. Meakin, journ. Anth. Institute, Aug. 1894; Halevy, Etudes Berb.-res (Première Partie); Essai d Égrafahie Libyque, 1875; Rinn, Les Origines Berb.-res, 1889; Hodgson, Notes on Northern Africa, the Sahara, and Soudan, 1844, pp. 12-44, though Mr. Hodgson is wrong, as other writers more excusably have been, in describing the "Tuarycks" as "a white people". - Jones, Dissertatio de Lingua Shillhense, 1715; Ubert, Bemerkungen iiber die Berbern und Tiblus, 1826; the Berber Dictionaries of Venture, Delaporte, and Newman; Hanoteau, La Kabylie, 1872-73, etc., etc. The Tuawahid is still occasionally met with; but a treatise still older, the Koran given to the Gumera tribes of Tetuan and the neighbouring coast by Abu Mohammed Hemym ben Ali-khalef Menhat, in 937 (A.H. 325), is mentioned by El Bekri, and is analyzed by Ebn Abd-el-Hhalim in his "Kartas". Another MS. described by these two historians is the book given to the Barguahah Berbers by Saleh-ben-Tarif, their chief, in A.H. 177 (A.D. 783), which is supposed to have been wholly or partly written in their language. Leo is also
wrong in supposing that the Romans—or Italians as Pory translates "Romani"—began to subdue Africa when "the Gothes" invaded Italy.

(86) This graphic description of a winter adventure in the Atlas might, so far as geographical details are concerned, have happened a few months, instead of four centuries, ago. Every winter the Atlas is deep in snow, and its spurs in the Riff are also white. At long intervals the Tangerines wake up to see a thin covering of the same very un-African snow in their town, though it is, we believe, erroneous to say that five years ago snow fell as far south as Mazagan. In reality it was hail. But less than a century after Leo's adventure, Mulai Achmed and his army had a narrow escape from being buried among the snows in the mountains between Sus and Dra, and caravans have since that date been smothered in the drifts. In the case of both Pory and Florianus the translation is faulty. Thus, wherever "cartes" are mentioned, "caravan" should be understood. What Leo calls "cacio" (cheese), is really more like curd. It sours in a few hours, but, notwithstanding, is kept and eaten when old. Like the rancid butter, buried in great jars, it requires a long apprenticeship to the custom of Morocco before it is much to European tastes.

(87) Cairo.

(88) There are many caves in the Atlas and other mountains of Morocco, some natural, others artificial. Several of the latter are excavated in the tufa deposit near Tasimet. Mr. Thomson could not find in his cursory examination anything to show that they had been used as human habitations, but inclines to the belief that they were places for concealing grain, or for the Pagan Berbers to bury their dead in. There are others, even more enigmatical, at the eastern end of the valley of Teluet, near the village of Tabugumt. Like the Tasimet ones, they are divided into separate cells, and in front of each cell is a trap-door giving entrance to a species of cellar. The Tabugumt Jews still use them as granaries, but from the smoke on the walls and roof, and the general arrangement of the caves, the probability is that they have at some time been utilised as dwelling-places, just as some are in Algeria. Close to An Tazil, in the foot of the hills of the Atlas, not very far from Amsmez, there are some of a very similar description, the doorways faced with masonry, and in some cases the cells are placed in tiers, so that the troglodytic inhabitants must have entered by descending with ropes into what are more like pits than caves. There are hundreds of these excavations, and many more in different parts of the country, such as on the way from Tetuan to Sheshuan in the Riff country, and again beyond Wazan. Hanno speaks of the swift-footed Troglodytes of the Atlas; but this is beside the point, as the Carthaginian mariner was never in the Atlas, and could only have seen the coast spurs where, however, there are plenty, e.g., near Cape Spartel.-Thomson, Travels in the Atlas and Southern Morocco, pp. 181-237; Harris, The Land of an African Sultan, pp. 243-245; Playfair and Brown, Bibliography of Morocco (Supp. Papers R.G.S., vol. iii, pp. 217-225). "Grandissimo lago; d'intorno al quale sono i popoli di Sin e di Gorran"; "Maximus lacus, cujus accola sunt Sinitm at Gorranitae" (Florianus).
This passage seems an echo of some vague information grafted into a fragment of lore from Strabo and Ptolemy, picked up either in Rome, or among the Arabic translations of the Greek and Latin writers, of which there were many in the libraries of the Moorish Kings of Spain, and in those of Morocco, four hundred years ago. For there are certainly no lakes, large or small, on the route from Fez to Egypt, since the Chotts and Lebkas could scarcely be designated by that name, even did they lie on the caravan track. But the name

NOTES TO BOOK I.
"Gorran" supplies a clue, for Leo uses it as equivalent to Kordofan. Accordingly, as the Morocco traders have for ages been in the habit of making a round journey by travelling from Timbuktu to Kordofan by way of Vadai and Darfur, this must be the route Leo indicates, though he never passed over it. As he has already noticed, Chad, the Great Lake, could not be the one intended, and Fittri is much too small. Arabs, however, often confuse lakes and rivers under one designation (Bahr), so that it is scarcely worth laying too much stress on Leo's vague, second-hand information. It is equally necessary to give a wide margin as to distances and localities noted under such circumstances. Hence it is possible that in placing the "people of Sin" (Sinites) in close relation to the "Goranites", he was simply making one of those easy guesses which, until the last thirty or forty years, were quite the rule among geographers. Strabo (Bk. iI) mentions the Mlw-ai, and Ptolemy (Bk. iv, ch. v) places the Vr'rT-;, or livi-ib;, in Cyrenaica, close to the Nasamones. Again (Bk. iv, chap. vii, p. 305, Wilberg's edit.), he notes among the tribes near Merde" Isle" on the Nile, the Imly lrai. It is also allowable to suggest that Leo might have obtained either from Ptolemy ideas of the "Nili Paludes", or from the Arab traders of the actual lake sources of the great River of Egypt. It may be added that, even at the beginning of this century, the people whom Jackson consulted regarding the country between the Niger and the Nile spoke of "a lake" on the course of the latter, so broad that they could not see the opposite shore. A party of Jinni negroes who travelled it, joined at Cairo the great caravan of the Wel-Akkaba el Garbra, with which they found their way through Barca, Tripoli, Tunis, Algeria, and Amgad to Fez, and Marekesh, when they again attached themselves to the Akka caravan, with which they reached Jinni after an absence of three years and two months.

(89) In 1805, a caravan proceeding from Timbuktu to Tafilet failed to find water at the usual wells, and the whole of the persons belonging to it, 2,000 in number, besides 1,800 camels, are said to have perished of thirst. All travellers by the caravan routes describe bones of men and animals as mingled together in various parts of the desert. Jackson, Morocco, p. 285; Denham and Clapperton, Narrative of Travels and Discoveries in Northern and Central Africa, vol. i, pp. 123, 125-8, 131, etc.

(90) This monument in the district of Azawad, if it ever existed, must have long ago been buried in the sand. Yet the story may be founded on fact. To this day traders declare that if by any accident the water skins give out, or much is lost by
percolation, io or even 20 dollars are given for a drink, and there is a tale told of 500 dollars
231

NOTES TO BOOK I.
having been paid for enough of water to quench the thirst of a wealthy traveller.-
(Jackson.)
(91) "Goron" is "Goro" of the original. Moore, who mistranslates the word as
Coran, makes it out to be the point of the well-known Kola or Guru nut (Sterculia
acuminata).- Travels in the Inland Parts of Africa, p. 36. The Carica Pafiaya,
which bears splendid fruit, and is scattered over the Niger country, is called
"gonda".
(92) This "Tesoro degli agricoltori traditto dalla lingua latina alt' arabica in
Cordova" (not "when Mf.nzor was Lord of Granada"), seems to have been the lost
work on Agriculture by Marcus Terentius Varro (i 16-27 B.C.), who Moore, or
the translator who assisted him, with a direct inversion of fact, declares translated
it into Arabic! The remains of Latin customs among the Berbers are noted by Leo.
"Frumenty" or "Frumme'ty" (from the Latin Frumentum) a dish into which boiled
wheat enters largely, is in some parts of England eaten on Christmas Eve. In
Morocco precisely the same dish (Kerrberr) is eaten on or about the 1st of
January, O.S., or the 12th of January, N.S., which is still reckoned New Year's
Day by the Moors in their calculations of the Christian era. Although never used
for ordinary reckoning, the European (Old Style) Calendar is employed to
calculate certain periods of feasts-one of which is St. John's Day-more especially
among the Berbers. The names of the month are apparently corruptions of those
in the Latin group of languages.- Times of Morocco (Tangier), No. 168, January
26th, 1889.
(93) The mistranslation of this chapter has been commented on in the
Introduction. In addition to the diseases mentioned, intermittent fever,
ophthalmia and other maladies of the eyes, small-pox, typhus occasionally,
cholera at intervals, elephantiasis, dropsy, and liver complaints are found among
the Morocco people. Vaccination is said to have been known to them from a very
early date, and those who practise it take the lymph direct from the cow : but until
the English Sherifa of Vazan persuaded many of her husband's adherents to be
vaccinated, the prophylactic was little carried out, or even heard of. Dysentery is
common owing to the readiness with which the people will drink almost any
water with no more filtering than through a piece of new turban, and the complete
neglect of sanitary precautions. But dyspepsia and liver ailments, due to
inordinate gluttony, is the most ordinary disease among the richer class of people,
who eat heavily of fat highly-spiced dishes, and take no exercise. Paralysis is also
sometimes seen: but lunacy is not frequent, and unless the victims are very
dangerous they are permitted to go at large, a madman being regarded as specially
under

NOTES TO BOOK I.
the countenance of Allah—a belief fully taken advantage of by a host of filthy, ragged, long-haired (often naked) knaves, who haunt the towns and markets, receiving alms from the charitable Gonta, rarer than in Leo's day. Drinking is at times secretly indulged in by the town natives, and much less commonly practised in the interior than a few centuries ago, when Canary wine was among the gifts made openly by Embassies to the Sultans. But, now-a-days, if a dissipated Moor tipples brandy reckless of the Koran—which casuists say prohibits wine only—he must compromise matters with his conscience by doing so secretly. Otherwise, the consequences are apt to be unpleasant if the peccadillo comes to the ears of the Governor, that is, unless he can dull that official's sense of duty with a bribe. The Jews, however, make a Marsala-like wine, and distil a spirit from dates and figs, which is occasionally smuggled into the harems; while the Rifrians, and other Berber tribes, drink the wine of their grapes. The races of northern Morocco, in general, have excellent teeth. Lame people are not often seen, and it is affirmed that many of the blind men who act as muezzins or callers of prayers in the mosques, have had their eyes destroyed in childhood, a blind man being in request for an office the incumbent of which overlooks from his perch in the mosque-tower all the adjoining gardens, house-tops, and court-yards. Corns, bunions, and deformed toes are almost unknown, as the loose slippers worn permit their feet to grow naturally; though the sole is so hard that it has been known to be frizzled by the fire only when the smell of roasted horn was noticed. A sham renegade (Al Aluje), one of a class for whom they have a well-founded contempt, who affected great piety in the mosque, was speedily unmasked by the presence of callosities on his feet. Syphilis is not now called the "Spanish disease" (mal di Spagna), but "the great sickness" (maradd el Kebir), or "the woman's sickness" (maradd el nissuan), and has now so permeated the entire race north of the Atlas that there are very few families who do not show marks of the national malady. Hot sulphur baths, like those of Mulai Yakub, near Fez, are greatly in request as remedial agents, and to severe perspiration many cures have been attributed. Thus one Kaid freed the negro soldiers of the "Maradd el Kebir" by making them carry heavy loads up the steep ascent from Fonti to Agader, and another—he was an Algerine—accomplished the same end by chaining the sick man to the rowing bench of his piratical galley, and plying the scourge freely. The plague has not appeared for many years, but leprosy is usually described as common. I have seen many of the cases accounted such. Lepers, according to Rohlfs—speaking, however, chiefly of Fez and the surrounding country more than thirty years ago— are not allowed to marry, except with lepers, or to enter towns or villages, or to practise any handicraft. The "Modjdun" live on alms, and some of them have prospered so well out of the offerings of the charitable thrown into the plate at the roadside by which they sit with their monotonous cry of "A leper! A leper!" (Modjdun! Modjdun!) that they possess cattle and cultivate farms. It is, however, very doubtful if the "djden" is really leprosy, and not a form of syphilis,

NOTES TO BOOK T.

have prospered so well out of the offerings of the charitable thrown into the plate at the roadside by which they sit with their monotonous cry of "A leper! A leper!" (Modjdun! Modjdun!) that they possess cattle and cultivate farms. It is, however, very doubtful if the "djden" is really leprosy, and not a form of syphilis,
which the hot climate of Morocco and the lack of proper treatment has made much worse than any variety of it known in Europe. Close to the Bab Dukala of Marakesh, the gate which leads to Mogador, is a village (El Hara) inhabited by people afflicted with the djden. It seems not to be spreading, and is not regarded as infectious. For, in spite of the statement of Rohlfs, who considered it leprosy—a view not held by most of the embassy physicians who have examined it—so considerable a number of healthy natives live in these villages that the rightful inhabitants are in a minority. Building also is going on, and so little fear have the people of the disease, that marriages occasionally take place between "lepers" and healthy persons without, Mr. Meakin was informed, the children inheriting the disease—a conclusion unlikely to be well based, no matter what theory is taken of its character. Yet the El Hara people are forbidden to enter the city, and, unless on special occasions, to be at the Gate, except in parties not exceeding two or three. (94) "Curatori di destri, quai cuschi e guatteri delle cucine e quai famigli di stalle."

(95) "My nursing"—mia nudra literally—which is in accordance with the writer's Spanish birth, and having "passed the greater part of his life" in Africa.

(96) "Amphibia" is not in Leo's text—simply a bird "d'un ingegno mirabile." The story, which dates from the time "when men took the form of animals, and animals spoke like men", is still told by the professional story-tellers in the market places of Morocco, whose tales constitute such a wealth of ungathered Arabic and Berber folk-lore.
